FIRMWARE VERSION 1.0.5.4

PRODUCT NAME

GSC3570 (Boot: 1.0.5.4; Core: 1.0.5.4; Base: 1.0.5.4; Prog: 1.0.5.4; Locale: 1.0.5.4)

HW Supported: 1.0A, 1.1A, 1.2A, 1.3A, 1.4A

DATE

11/04/2020

SUMMARY OF UPDATE

This is a major milestone release, with lots of important new feature and function implemented, in addition to some bug fixes.

Factory Reset Required:

- Factory Reset the device after upgrade to this version to initialize all parameters correctly.
- SD Card must be formatted via touch screen UI before using for storage.

ENHANCEMENT

- Added switching to RTSP Monitor during an active SIP call.
- Added Tooltip specified file requirement for uploading customized wallpaper.
- Added Secure Open Door by using GSC3570 (Alarm_Output Interface) controlling strike/lock from inside building via peering with GDS3710 (FW1.0.7.19 above required) or GDS3705 (FW1.0.1.13 above required) at outside over network.
- Added RTSP supporting.
- Added FTP server support so GDS3710 and IP Cameras can upload snapshots and save to SD card.
- Added VLAN functions in "General networking settings" at LCD Settings UI.
- Added support to customize the main idle screen.
- Enhanced system performance and stability.
- Added open door softkey support for 3rd party door systems.
- Added Czech language support in touch UI.

BUG FIX

- Fixed selecting Traditional Chinese not displayed in LCD.
- Fixed failed to delete Contacts in batch.
- Fixed searching Contact on LCD requiring multiple taps to call out or view Contact details.
- Fixed device stop sending RTP after receiving 183 SIP message.
- Fixed delay alarm confirmation prompt will not pop up when device in screensaver mode.
- Fixed displaying long number or name abnormal.
- Fixed cannot automatically switch to another good known Wi-Fi if current Wi-Fi failed.
- Fixed Download/Upload Configuration; Export/Restore Backup Package are invalid.
- Fixed long time video call may fail.
- Fixed maximum brightness is not bright enough and screen flicking during adjustment.
- Changed "São Paulo" time zone to UTC-3
- Fixed alarm call not get through (e.g.: call timeout or wrong number), the next following alarm call will not play siren sound when call established.
- Fixed deleting Contact in LCD UI will not have prompt and fail to delete the record.
- Fixed device cannot scan SSID when disable/enable the Wi-Fi in WebUI.
- Fixed cannot fully display SSID with special characters.

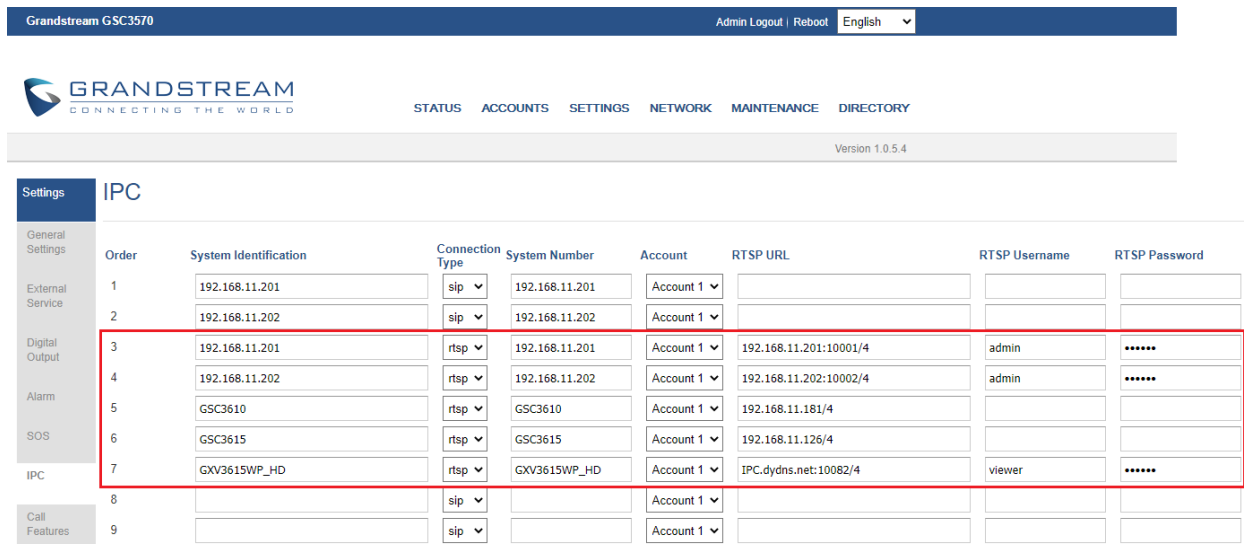

NEW FEATURES OVERVIEW

This section lists major new features or improvement and describes how to use them from the user's point of view.

RTSP SUPPORT

- Web Configuration**

This option can be found under device web UI → Settings → IPC:

Grandstream GSC3570 Admin Logout | Reboot English

GRANDSTREAM CONNECTING THE WORLD STATUS ACCOUNTS SETTINGS NETWORK MAINTENANCE DIRECTORY Version 1.0.5.4

Settings IPC

Order	System Identification	Connection Type	System Number	Account	RTSP URL	RTSP Username	RTSP Password

8		sip		Account 1			
9		sip		Account 1			

- Touch Configuration**

This can also be configured via touch UI by press the **“Monitor”** icon from the touch screen:

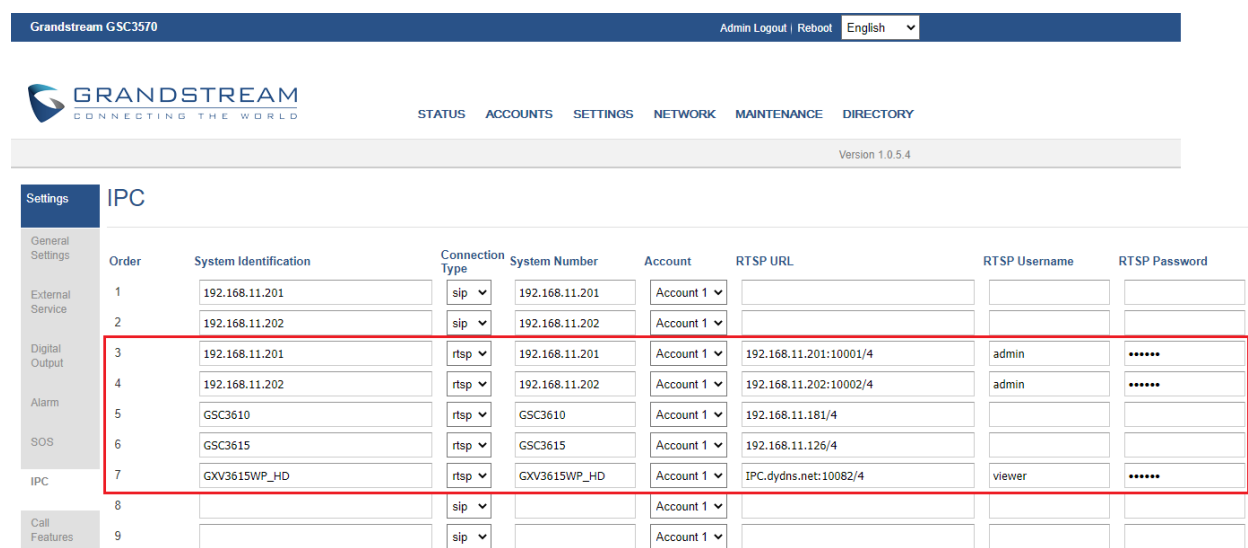

• Functionality

This feature enhancement will allow users to monitor the IPCs using RTSP stream, in addition to previous SIP video call mode. So there are now two monitor modes, the RTSP steaming mode in addition to previous SIP call mode.

The RTSP mode allows users to view 3rd party IP camera RTSP stream, if the streaming can be decoded by GSC3570, to save customer's investment.

Due to GSC3570 7" capacitive touch screen only has 1024x600 resolution and limited CPU resource, it can only decode video stream of **720p (HD) with bit rate less than 1Mbps**, this means 2nd stream for most of the Grandstream IP cameras or GDS3710. If video stream over this limit, GSC3570 will pop up error message. This means GSC3570 cannot decode 1080p (FHD) or 1st stream of most of the Grandstream IP cameras and cannot display it.

Here is the webUI configuration sample: *(Recommended for input convenience)*

Order	System Identification	Connection Type	System Number	Account	RTSP URL	RTSP Username	RTSP Password
1	192.168.11.201	sip	192.168.11.201	Account 1			
2	192.168.11.202	sip	192.168.11.202	Account 1			
3	192.168.11.201	rtsp	192.168.11.201	Account 1	192.168.11.201:10001/4	admin	*****
4	192.168.11.202	rtsp	192.168.11.202	Account 1	192.168.11.202:10002/4	admin	*****
5	GSC3610	rtsp	GSC3610	Account 1	192.168.11.181/4		
6	GSC3615	rtsp	GSC3615	Account 1	192.168.11.126/4		
7	GXV3615WP_HD	rtsp	GXV3615WP_HD	Account 1	IPC.dydns.net:10082/4	viewer	*****
8		sip		Account 1			
9		sip		Account 1			

NOTE:

- If the IP camera support anonymous RTSP, username and password can leave blank, otherwise user ID and password must be configured based on IP Camera.
- The RTSP can only decoding 2nd stream or max. resolution 720p 1M bit rate (due to MIPs limitation, and touch panel max resolution is 1024x600).
- Now there are two ways to monitor the IP cameras: SIP extensions Call (UCM/Proxy) or IP peering (No Proxy/UCM); RTSP Streaming. The RTSP can be configured with User ID (secure) or anonymous (convenient if in same LAN) as long as the IP camera allows.
- The GSC3570 can view RTSP video streaming of IP camera configured "One by One" (multiple RTSP streams simultaneously NOT supported due to the MIPs limitation).

Here is the Touch UI configuration sample:

Press the “**Monitor**” icon will get into below UI. Select “IP camera” tab:

- Press  icon to get into the page of adding new IP camera by input related information.
- Press  icon to edit existing IP camera information.

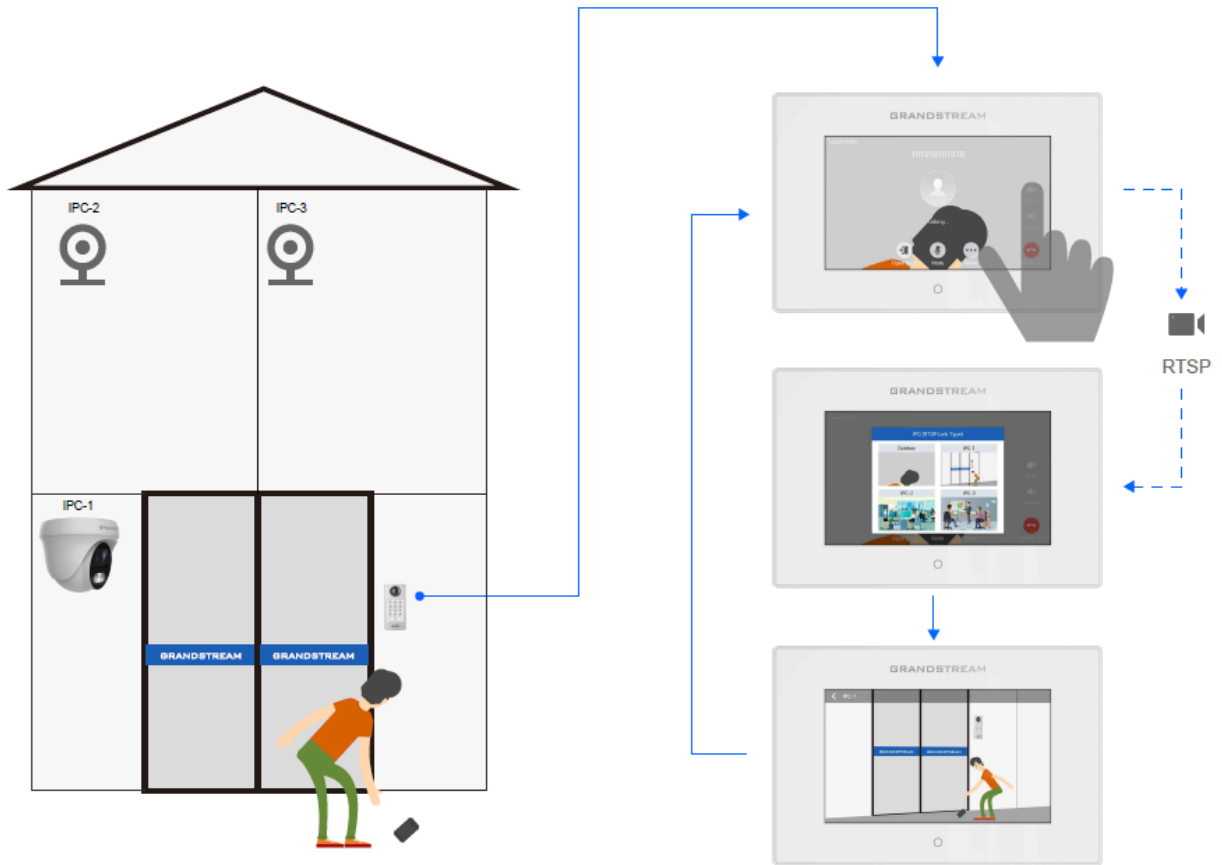

- Press  icon to get into the UI page to edit the information of selected IP camera.

- Press  icon to view the live RTSP video stream of the selected IP camera.
- Press  icon to update the image icon of the selected IP camera via the snapshot of the moment when icon pressed. The image is used to remind the scene where IP camera monitored.

- **Application Scene:**

SWITCH TO RTSP VIDEO MONITOR IN MIDDLE OF CALL

- **Functionality**

This new feature is designed and implemented based on feedback from customers. It can help to increase safety but keep convenience, used in public scene like School/Campus, Dorm/Hallway, Hospital, Library, Gym, Theater, Club, etc.

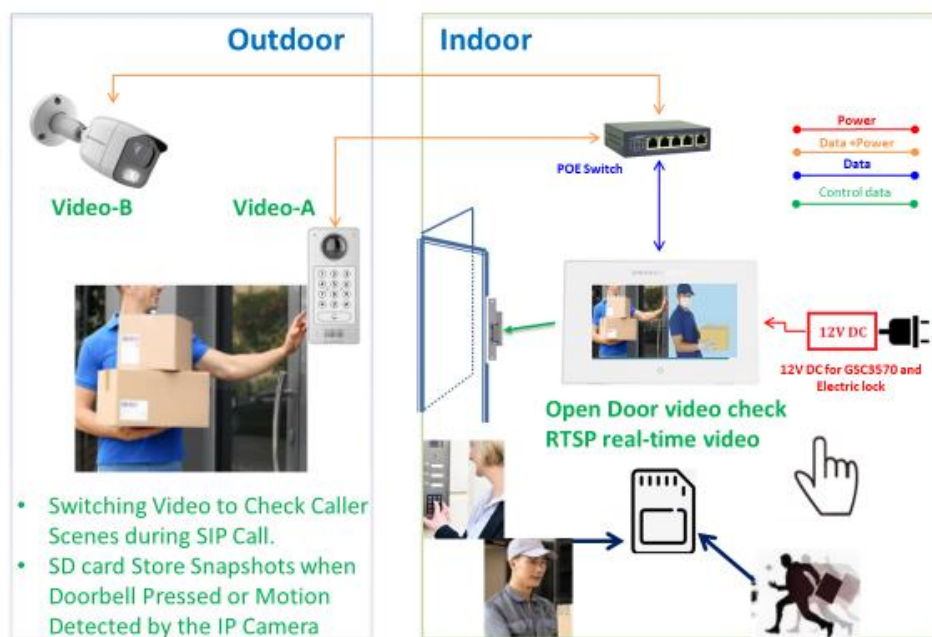

Basically in open/public space where there is a GSC3510 Audio Intercom or IP phone (or GDS3705), User (e.g.: student) pressing (emergency) button or make a call to GSC3570 (e.g.: security guard), if same location has installed IP camera around, once call established and in session, the GSC3570 will display RTSP icon on the right side of touch screen UI, pressing RTSP icon and select the related IP Camera, the call will automatically ONHOLD, the person at GSC3570 side can see the RTSP live video and know what is happening, then switch back to continue talking to the caller, or open door if this is access control without built-in camera (e.g.: GDS3705).

The caller side can be: GSC3510 (button call), IP phone (video or audio) or GDS3705/GDS3710 (access control).

This feature needs working SIP call and RTSP stream preconfigured. This feature will work with GDS3705 or any Grandstream SIP phones and Grandstream IP cameras or even some 3rd party IP cameras.

Below are example usage scene diagram:

GSC3570 RTSP Video Monitor Switching During SIP Calls

GSC3570/GSC3510/IPC Video Monitor During Call (Secure Campus)

Below are the GSC3570 touch panel UI screenshots:

- Accepted Incoming Call (Press the "RTSP" icon at right side:

- Select the IP Camera to view the live RTSP video:

- Press the touch panel screen on up left corner the “<” icon to resume the call:

SECURE OPEN DOOR PEERING WITH GDS3710/GDS3705

This new feature requires GSC3570 and GDS3710/GDS3705 paired together to function. With GDS3710 or GDS3705 installed outside, the GSC3570 is installed inside, the strike or lock is wired directly to the Alarm_Out interface of GSC3570 to control the door from inside, therefore more secure compared to the strike wired directly to GDS3710/GDS3705 at outside. Below is the application scene illustration:

GSC3570 Open Door from Inside

Physically More Secure

NOTE:

- GDS3710 FW1.0.7.19 or above, GDS3705 FW1.0.1.13 or above, are required to work with GSC3570.
- Only one door can be controlled due to GSC3570 only has one Relay Control circuit.
- If multiple doors need to be controlled by GSC3570, SIP call is required and door/strike/relay should be controlled by related GDS37xx directly. This is existing feature.

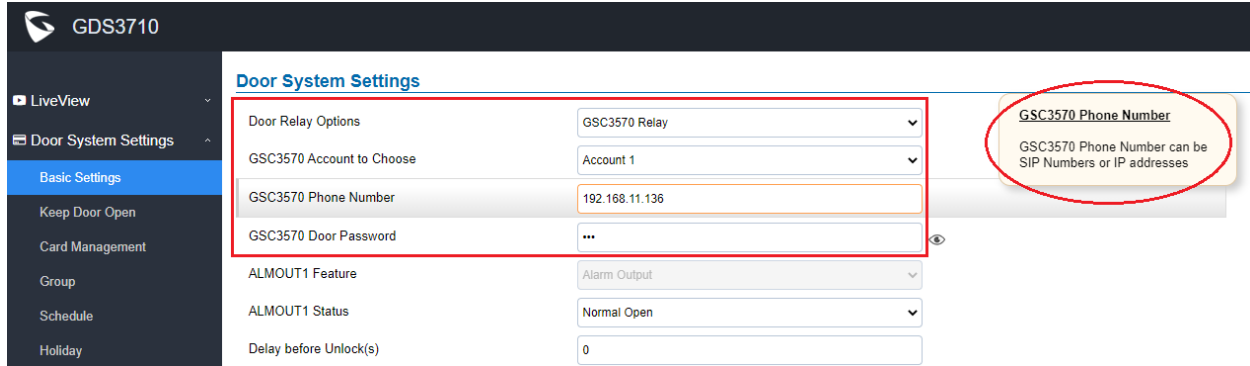

For the GSC3570 and GDS37xx pairing, use SIP extension only (Cloud or UCM); IP only (No SIP proxy or UCM); or Mixed configuration (SIP extension and fallback to IP if Proxy failed) all works.

Although it works (local or remotely) via using SIP extension over Internet by UCM/Proxy, It is recommended to use static IP if the GSC3570 (inside) and GDS37xx (outside) are in the same location at the same LAN, just for fast response and reliability, in case Internet/UCM is down or network outage.

- **Web Configuration**

Here are some sample configuration screenshots of GDS37xx and GSC3570 pairing to secure open door:

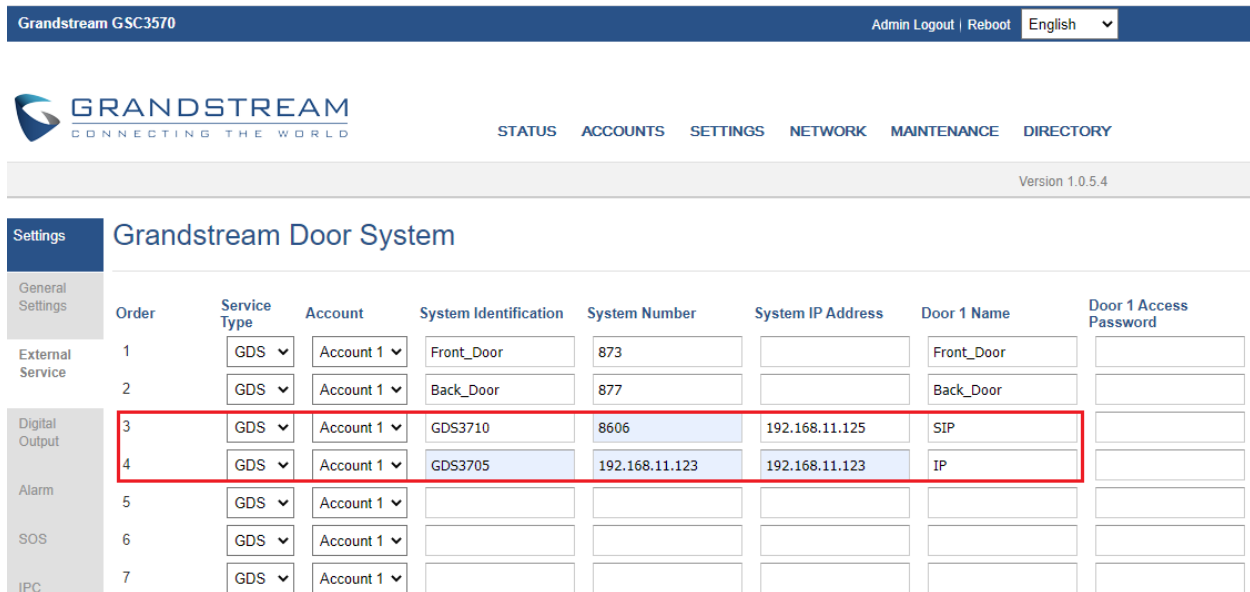

- **GDS3710:**

The screenshot shows the 'Door System Settings' page for a GDS3710 device. The left sidebar contains navigation options: LiveView, Door System Settings (selected), Basic Settings, Keep Door Open, Card Management, Group, Schedule, and Holiday. The main content area is titled 'Door System Settings' and contains several configuration fields. A red box highlights the 'GSC3570 Phone Number' field, which is set to '192.168.11.136'. A yellow callout box points to this field with the text: 'GSC3570 Phone Number can be SIP Numbers or IP addresses'. Other fields include 'Door Relay Options' (GSC3570 Relay), 'GSC3570 Account to Choose' (Account 1), 'GSC3570 Door Password' (masked with dots), 'ALMOUT1 Feature' (Alarm Output), 'ALMOUT1 Status' (Normal Open), and 'Delay before Unlock(s)' (0).

- **GSC3570:**

See below the screenshot of GSC3570 configuration. The doorbell call from different GDS37xx, it will have virtual "One Button Open Door" icon displayed in "Preview" (if early media supported) or when call established. Press the virtual button at GSC3570 screen will allow remotely open the door where the strike is controlled by the related GDS37xx.

The screenshot shows the 'Grandstream GSC3570' configuration page. The top header includes 'Grandstream GSC3570', 'Admin Logout | Reboot', and a language dropdown set to 'English'. Below the header is a navigation bar with links: STATUS, ACCOUNTS, SETTINGS (selected), NETWORK, MAINTENANCE, and DIRECTORY. The version '1.0.5.4' is displayed on the right. The main content area is titled 'Grandstream Door System' and contains a table with 8 columns: Order, Service Type, Account, System Identification, System Number, System IP Address, Door 1 Name, and Door 1 Access Password. The table has 7 rows. Rows 3 and 4 are highlighted with a red box. Row 3 shows 'GDS3710' with system number '8606' and IP address '192.168.11.125', with 'SIP' in the Door 1 Name field. Row 4 shows 'GDS3705' with system number '192.168.11.123' and IP address '192.168.11.123', with 'IP' in the Door 1 Name field.

Order	Service Type	Account	System Identification	System Number	System IP Address	Door 1 Name	Door 1 Access Password
1	GDS	Account 1	Front_Door	873		Front_Door	
2	GDS	Account 1	Back_Door	877		Back_Door	
3	GDS	Account 1	GDS3710	8606	192.168.11.125	SIP	
4	GDS	Account 1	GDS3705	192.168.11.123	192.168.11.123	IP	
5	GDS	Account 1					
6	GDS	Account 1					
7	GDS	Account 1					

There is no door limitation for such usage but only ONE DOOR can be opened at one time. It is just a typical SIP call open door application.

In addition to the above “External Service”, the “Digital Output” also need to be configured:

(Replace SIP extension with IP address if no SIP Proxy or UCM involved)

Also if the solution or system integration is using static IP address without SIP Proxy, all the devices involved (GDS/GSC/IP Phone) should choose “NAT Traversal” to “No” and should NOT “Use Random Port”, otherwise it will cause ghost call (SIP signaling working but NO media).

The IP phone or GSC3570 can use any empty account, meaning while default Account 1 registered to UCM/Proxy, the blank Account2 can be used to IP call. (but need to select this account to be “Active”).

When this feature function and door opened, the GSC3570 will play a long “Beep” notifying the successful relay operation to open door (a relay click sound can be heard), and display an “Open Door” icon at top right corner of the touch screen. The icon will disappear when “Unlock holding time” expired.

At the same time, the GDS37xx side will also play a long “Beep” notifying successful open door.

When configured correctly, the GSC3570 Secure Open Door will function to all GDS37xx open door mode: RFID card, Local PIN, Remote PIN (SIP Call or DTMF Open Door).

• **Functionality**

This feature is implemented based on customers with open door security concern.

Now for GDS37xx, three relay control mode can be used by customers or system integrators:

- 1) Local Relay Control
- 2) 3rd party Web relay Control
- 3) GSC3570 Relay Control

This control protocol between GSC3570 and GDS37xx is encrypted, to secure data transmitted over the network, allowing GDS37xx accept input and verify the information, then instruct GSC3570 to control the relay and open door.

FTP SERVER AND SD CARD SUPPORT

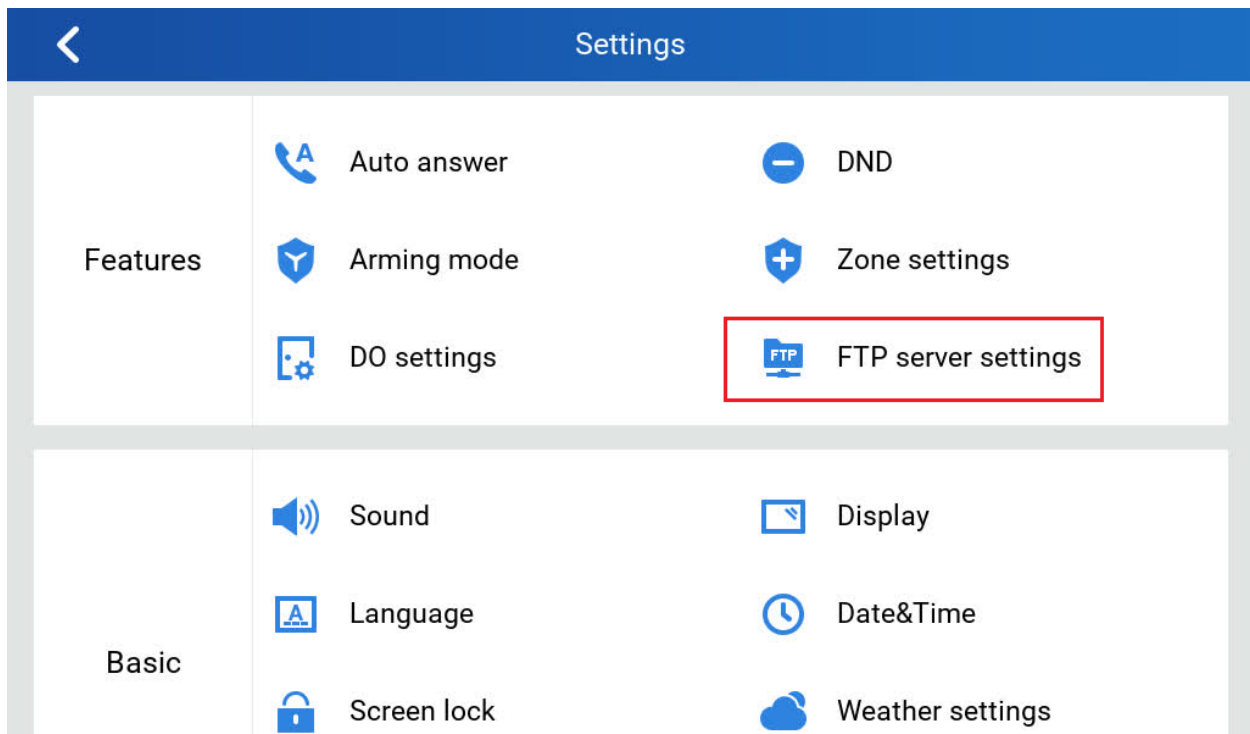

The GSC3570 now has built-in FTP server (like all other Grandstream GXV3xxx video IP phone), and the SD card inserted into the SD card slot can now be used to store snapshots triggered by motion detection alarm of IP cameras, or snapshots of doorbell call or open door event from GDS3710.

The maximum SD/TF card supported is 256G. The SD card must be formatted by GSC3570 before usage.

- **Functionality**

The FTP and SD card function only can be configured via touch screen.

Press “Setting” on the touch screen, get into the “Settings” screen, then touch the “FTP server settings” to configure the FTP server parameters, as shown in below screenshots:

By default the FTP Server is disabled. Touch to “Enable” the FTP, then configure the Port used, create username and Password.

The default port is TCP 21, but customer can configure to different port based on network condition.

If Username and Password are leaving blank as default (not configured), then this means they are not required and “anonymous FTP” used. This is not secure but convenient in some LAN integration.

OK

Once the FTP Server enabled, and the SD card initialized (formatted) and mounted successfully, the FTP icon and SD card icon will be displayed at the top right corner of the “Home” screen like below:

To check the snapshots in the SD card, touch the “Files” icon, the snapshots will be stored into related file folders according to following rules:

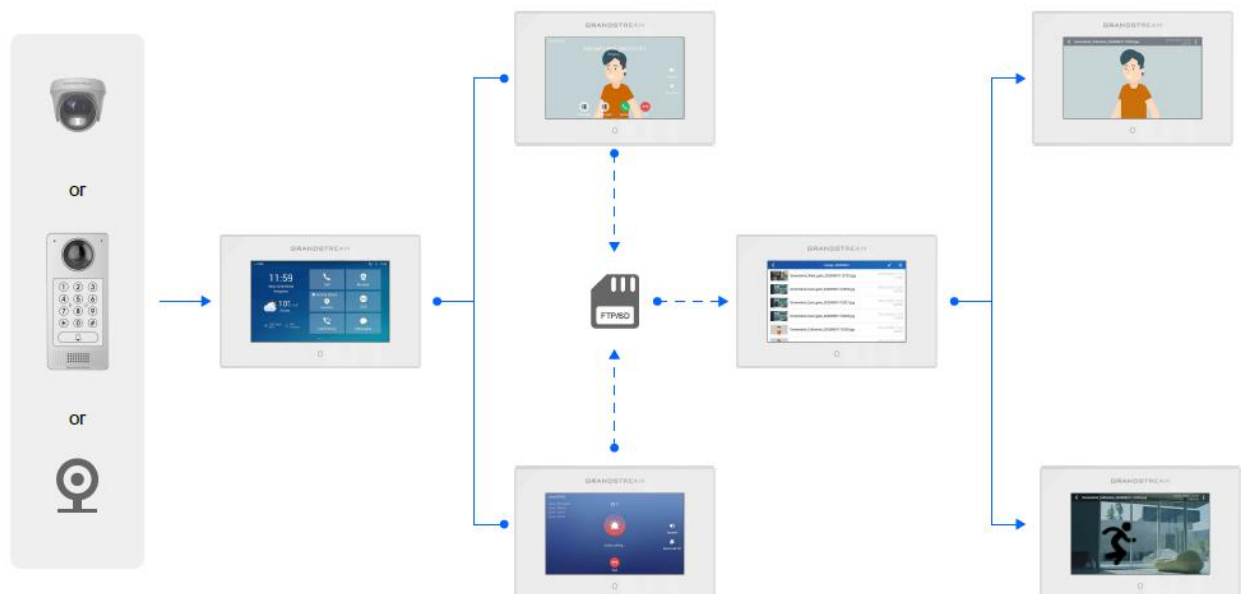

- For GSC361x IP Camera and GDS3610, snapshots will put in root folder with name based on “DeviceModel_Last6MAC”, which identify the different IP Cameras.
- Inside the device name folder, the snapshots will be store by the file folder with “Date” as folder name. All the snapshots in that date will be stored in that folder.

- Application Scene:**

TOOLTIP FOR UPLOADING CUSTOMIZED WALLPAPER

- **Web Configuration**

This option can be found under device web UI → Settings → LCD Display:

The screenshot shows the Grandstream GSC3570 web configuration interface. The top header includes the device name "Grandstream GSC3570" and links for "Admin Logout", "Reboot", and a language dropdown set to "English". The main navigation bar includes "STATUS", "ACCOUNTS", "SETTINGS", "NETWORK", "MAINTENANCE", and "DIRECTORY". The "SETTINGS" section is expanded, showing a sidebar with categories like General Settings, External Service, Digital Output, Alarm, SOS, IPC, Call Features, Preferences, Date and Time, Language, LCD Display, and Ringtone. The "LCD Display" category is selected, showing the "LCD Display" settings page. This page includes fields for "Active Backlight Timeout" (set to 180) and "Screensaver Timeout" (set to 120). The "Upload Wallpaper" section has an "Upload" button and a "Delete" button. A tooltip is displayed over the "Upload" button, providing instructions: "Must be in JPG or PNG format, resolution 1024 X 600. 500 KB or smaller." and includes "Reset to Default" and "Undo" options.

- **Functionality**

This feature is adding to advise customer what kind of customized wallpaper file can be uploaded into GSC3570.

The file must be JPEG or PND format, with resolution 1024 x600, and maximum size 500KB.

CUSTOMIZE THE MAIN IDLE SCREEN

This option can be configured via touch screen UI.

Press “Settings” in the “Home” screen, then select “Desktop settings” to adjust the related feature or function icons to be displayed at “Home” page or Desktop:

Select “-” or “+” from touch screen to do the operation.

- **Functionality**

This feature is implemented based on request from customers in field, to allow user to customize the desktop icons in the “Home” screen.

OPEN DOOR SOFTKEY FOR 3RD PARTY DOOR SYSTEM

- Web Configuration**

This option can be found under device web UI → Settings → External Service:

Grandstream GSC3570 Admin Logout | Reboot English

[STATUS](#) [ACCOUNTS](#) [SETTINGS](#) [NETWORK](#) [MAINTENANCE](#) [DIRECTORY](#)

Version 1.0.5.4

Settings

Grandstream Door System

Order	Service Type	Account	System Identification	System Number	System IP Address	Door 1 Name	Door 1 Access Password
External Service	1	GDS	Account 1	Front_Door	873		Front_Door
	2	GDS	Account 1	Back_Door	877		Back_Door
Digital Output	3	GDS	Account 1	GDS3710	8606	192.168.11.125	SIP
	4	Other	Account 1	3rd Party Door Access	8608		Side_Door
Alarm	5	GDS	Account 1				

- Functionality**

This feature is implemented to meet request of customers from field.

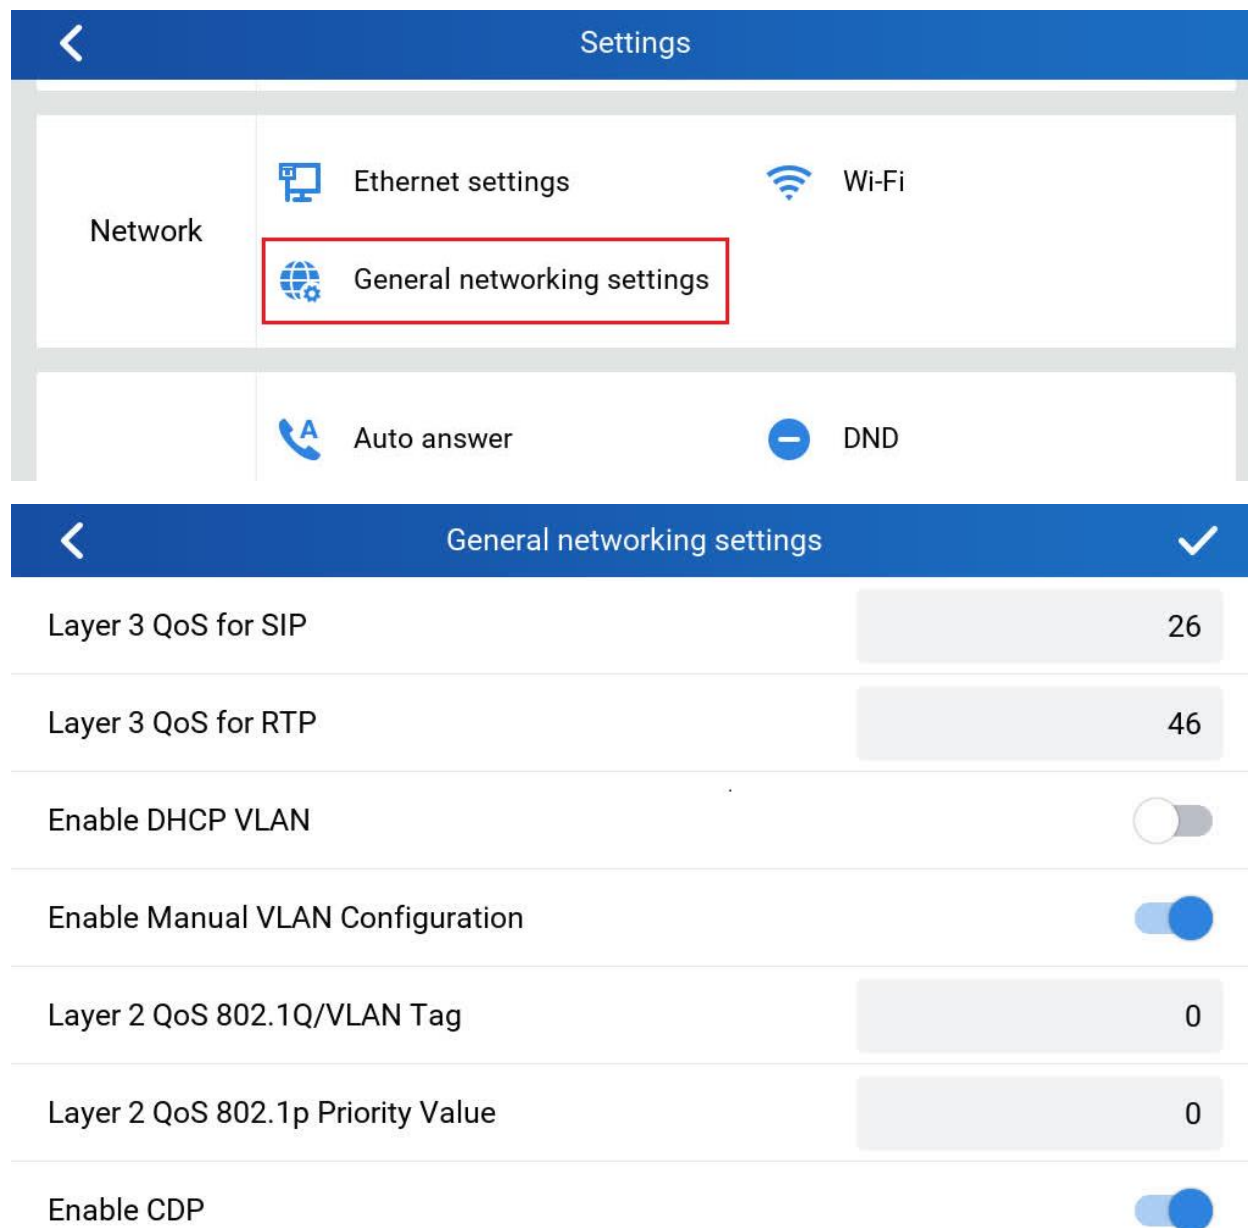

By select and configure the supported related 3rd party door access system here, when GSC3570 is in SIP call with DTMF open door operation, the “Soft Button” preprogrammed will appear in the GSC3570 touch screen. User will be able to press the soft key to sending the open door PIN to related 3rd party door access control system to open door.

This is enhancement to help system integrators and customers to integrate GSC3570 with 3rd party Door Access Control system to operate open door remotely.

VLAN CONFIGURATION VIA LCD SETTING

In addition to the webUI VLAN configuration under “Network → Advanced Settings”, in the LCD touch screen also added this configuration via touch screen UI.

Press “Settings” in the “Home” screen, then select “General network settings” to adjust the related VLAN parameters from the touch screen:

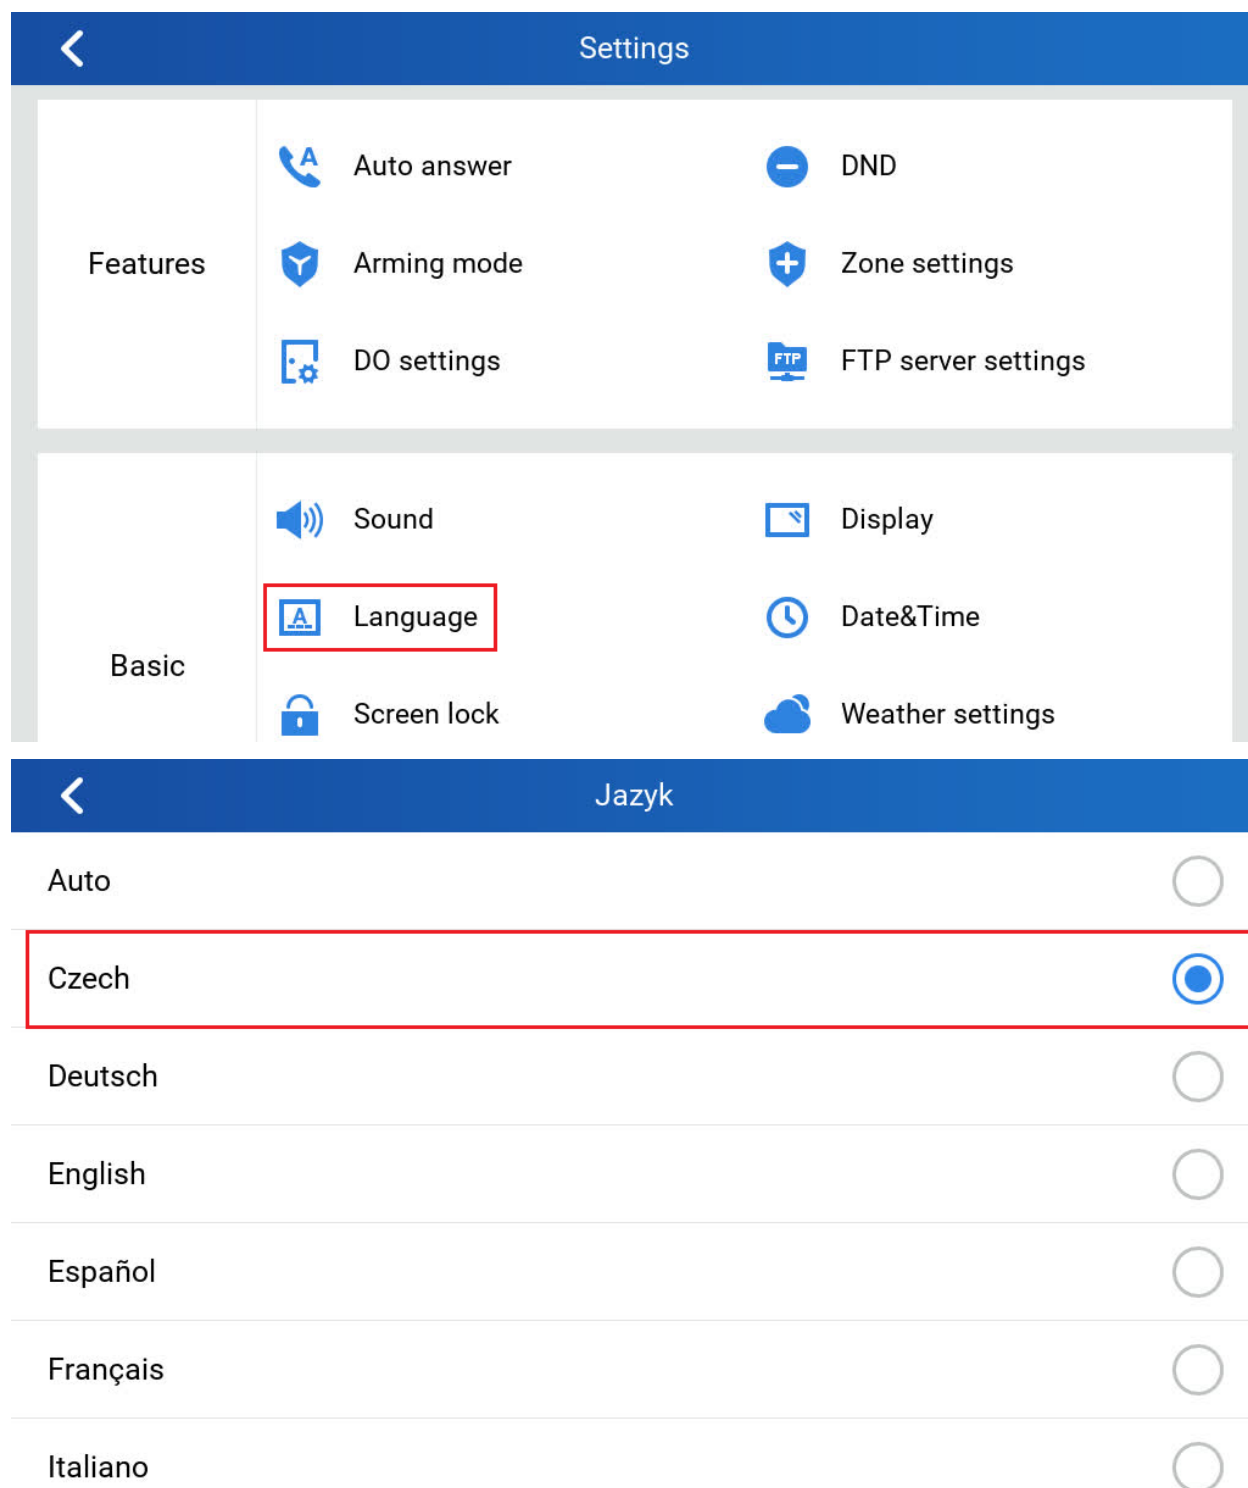

- **Functionality**

This feature is implemented based on request for customers in field, to help system administrator or customers to configure and adjust the VLAN parameters conveniently from touch screen.

ADDED CZECH LANGUAGE SUPPORT IN LCD DISPLAY

Press “Settings” in the “Home” screen, then select “Language” icon to choose required language to be displayed in the touch screen. Default is “Auto”, automatically displaying the language based on location.

For detailed information, please refer to User Manual and Resource Center:
