- **[Voicemail]** Voicemail group names will now be displayed.

BUG FIXES

- **[General]**
 - Fixed several UI issues.
 - Fixed an issue where call feature names (e.g., call queue names, ring group names, etc.) would not be displayed even when *Replace Display Name* is enabled for the queue.
 - [Firefox] Fixed an issue with abnormally high mic volume in certain cases.
- **[Call]**
 - Fixed an issue where an inbound caller's contact name does not appear when the call is ringing.
 - Fixed an issue where auto-answer does not work properly.
 - Fixed an issue where keyboard input could not be read as DTMF entry in a call.
 - [Firefox] Fixed an issue with being unable to make calls after a long call.
 - [Firefox] Fixed an issue with audio/video after disconnecting and reconnecting related devices.

NEW FEATURES OVERVIEW

This section describes the major new features/changes introduced in the update and provides instructions for usage.

MULTI-PARTY MONITORING

Users can now monitor video feeds from multiple devices at the same time. Note: The max number of devices that one can monitor is based on the UCM's *Max Number of Video Feeds* configuration.
