

GXW4216 V2/GXW4224 V2/GXW4232 V2/GXW4248 V2

Firmware Release Notes

IMPORTANT UPGRADING NOTE

- Once the GXW4224/GXW4232/GXW4248 V2 device 1.0E is upgraded to 1.0.29.6, it cannot be downgraded to 1.0.27.3 or an earlier version.
- Once the GXW42xx V2 device is upgraded to 1.0.7.2, it cannot be downgraded to 1.0.5.4 or an earlier version due to the addition of 2nd generation individual certificates.
- GXW42xx V2 device uses a different firmware file from the GXW42xx V1 device. Please use the correct firmware file for V1 and V2 devices. To distinguish GXW42xx V2 device from V1 device, please check the label on the back of the device.
 - (1) GXW42xx V2 has "V2" printed for model name. For example, "Model: GXW4216 V2". If the model's name doesn't have V1 or V2 printed, the device is GXW42xx V1.
 - (2) GXW42xx V2 has the device password printed on the label. GXW42xx V1 does not have it.
- For GXW42xx V2 device on 1.0.1.4 or earlier version to upgrade to 1.0.3.4+, the HTTP firmware upgrade path is:
[firmware.grandstream.com/GXW42xx V2 1.0.3.9 for fw 1.0.1.4 or lower](http://firmware.grandstream.com/GXW42xx_V2_1.0.3.9_for_fw_1.0.1.4_or_lower)

After upgrading to 1.0.3.9, you can upgrade to latest firmware using HTTP firmware path:
firmware.grandstream.com
- Once the GXW42xx V2 device is upgraded to 1.0.3.x, it cannot be downgraded to 1.0.2 x or earlier version.

- GXW4232 V2 firmware file name: gxw4232v2fw.bin
MD5: 2ec8d776ed2a5fee0ea0cf07b7c4ff38
- GXW4248 V2 firmware file name: gxw4248v2fw.bin
MD5: 1eac27e6a121795eb47e28cb297fd0c8

ENHANCEMENT

- Added support for the custom config order feature on the WebUI. [Provision Config Order]
- Changed the string "OPUS" to "Opus" in the Web UI.
- Adjusted DHCP Option 160 to a higher priority than Option 66 to match other GS devices.
- Added support for disabling FXS voltage when the port is disabled. [Enable Voltage Off Upon Port Disabled]
- Added support for customizing the Caller ID order for Vonage.
- Added support for UTF-8 characters in Analog Port Name fields (P4180-4263 and P21192-21207).
- Added a new option "3 – Optional" to SRTP Mode (P183/443/543/643).
- Added the ability to calculate and add checksum values to outbound UDP RTP packets.
- Added support for the number of beginning digits to strip from Caller ID. [Number of Beginning Digits to Strip from Caller ID]
- Added support for automatically switching to available backup IPs via DNS SRV upon receiving 5XX error responses from the SIP server.
- Added support for preventing REGISTER and UPDATE packets from being sent to the primary SBC while a session is actively established via the secondary SBC during DNS SRV failover.
- Added the ability to display the Serial Number on the System Info page.
- Added support for a customizable dial tone for call forwarding features on FXS ports. [Dial Tone when Call Forward Active]

- Added support for Feature Key Synchronization. [Feature Key Synchronization]
- Added support for displaying GSDVC information on the System Info page.
- Added support for T.38 Talker Echo Protection (TEP). [Enable T38 TEP]
- Added support for AES-GCM Encryption in "OpenVPN® Encryption" (P20717) with new options: "AES-128-GCM", "AES-256-GCM", and "CHACHA20-POLY1305".
- Added support for the "HTTP/HTTPS Proxy" setting. [HTTP/HTTPS Proxy]
- Added the ability to configure SIP Timer B. [SIP TIMER B]
- Added the ability to configure SIP Timer F. [SIP TIMER F]
- Pvalue not in WebUI:
- P28936 - Enable Wideband PCM Resolution (0 - Narrowband 8kHz sample rate, 1 - Wideband 16kHz sample rate; Default is 1).
- Added and improved features for customizing default [X GRANDSTREAM Vendor Configuration File] product settings.
- Improved system security.

BUG FIX

- Fixed an issue causing call failures after an upgrade.
- Fixed the incorrect Circuit ID value sent in the TR-069 connection request when CID is pushed via DHCP Option 82.
- Fixed the TR-069 ConnectionRequestURL format for TotalPlay.
- Fixed the Session ID not incrementing after an SDP update.
- Fixed the CA Bundle Manifest not displaying uploaded certificate details.
- Fixed a potential memory leak issue.
- Fixed a memory leak related to subjectAltNames during TLS connection validation.
- Fixed the SIP trunk failing to register after an upgrade.
- Fixed an issue where the Call Waiting Tone played fax noise to both parties when CID was delivered.
- Fixed internal bugs.

NEW FEATURES OVERVIEW

This section lists major new features and describes how to use them from the user's point of view.

Provision Config Order

- **Web Configuration**

Users can find the configuration section in Web -> Maintenance -> Upgrade and Provisioning.

Download and Process All Available Config Files

☒ No ☐ Yes

☐

Available
0/2

cfgc074ad7c6901_override.xml ▲
 cfgdhcpcpt67.xml

Provision Config Order

☐

Selected
0/4

cfgc074ad7c6901.xml ▲
 cfgc074ad7c6901
 cfg\$product.xml
 cfg.xml

- Functionality**

This feature allows users to configure the "Provision Config Order" option. The device will provision the selected configuration files in the configured order when the "Download and Process All Available Config Files" feature is disabled. Both wildcard matching and exact matching are supported.

- New P Values**

Pvalue	Description	Value range	Default
8501	Provision Config Order	String: Checkbox cfg\$mac.xml; cfg\$mac; cfg\$product.xml; cfg.xml; cfg\$mac_override.xml; cfgdhcpcpt67.xml	cfg\$mac.xml; cfg\$mac; cfg\$product.xml; cfg.xml;

Enable Voltage Off Upon Port Disabled

- Web Configuration**

Users can find the configuration section in Web -> Profiles-> Audio Settings.

Disable Line Echo Canceller ☒ No ☐ Yes

Enable Voltage Off Upon Port Disabled ☒ No ☐ Yes

- **Functionality**

This feature allows users to configure the "Enable Voltage Off Upon Port Disabled" option, user could configure whether to turn off the port voltage after disabling the port.

- **New P Values**

Pvalue	Description	Value Range	Default
28942	Enable Voltage Off Upon Port Disabled	Number: 0 – No 1 – Yes	0 – No
28943			
28944			
28945			

Number of Beginning Digits to Strip from Caller ID

- **Web Configuration**

Users can find the configuration section in Web -> Profiles-> Call Settings.

Replace Beginning '+' in Caller ID with

Number of Beginning Digits to Strip from Caller ID

Hunting Group Type ☒ Circular ☐ Linear ☐ Parallel

- **Functionality**

This feature allows users to configure the Number of Beginning Digits to Strip from Caller ID.

- **New P Values**

Pvalue	Description	Value range	Default
29096	Number of Beginning Digits to Strip from Caller ID	Number: 0 - 10	0
29196			
29296			
29396			

Dial Tone when Call Forward Active

- **Web Configuration**

Users can find the configuration section in Web -> Advanced Settings -> Ring Tones.

Remote On Hold Tone

Dial Tone when Call Forward Active

- **Functionality**

This feature allows users to configure dial tone for call forwarding features on the FXS Port.

- **New P Values**

Pvalue	Description	Value range	Default
22666	Dial Tone when Call Forward Active	String: Max Length 256 Characters.	f1=350@-17,f2=440@-17,c=0/0;

Feature Key Synchronization

- **Web Configuration**

Users can find the configuration section in Web -> Profiles-> Call Settings.

Special Feature Standard ▼

Feature Key Synchronization ☒ No ☐ Yes

- **New P Values**

Pvalue	Description	Value range	Default
2325	Feature Key Synchronization	Number:	0 - No
2425		0 - No	
2525		1 - Yes	
2625			

Enable T38 TEP

- **Web Configuration**

Users can find the configuration section in Web -> Profiles-> Fax Settings.

T.38 Max Bit Rate 9600bps ▼

Enable T38 TEP ☒ No ☐ Yes

- **Functionality**

This feature allows users to configure the Enable T.38 TEP. When enabled, talker echo protection (TEP) will be activated for T.38 fax calls. TEP helps reduce echo interference but may impact transmission reliability on some connections. Enable only if echo is affecting fax quality.

- **New P Values**

Pvalue	Description	Value Range	Default
22667 22668 22669 22670	Enabled T.38 TEP	Number: 0 – No 1 – Yes	0 – No

HTTP/HTTPS Proxy

- Web Configuration**

Users can find the configuration section in Maintenance -> Network Settings.

Advanced Network Settings

Maximum Transmission Unit (MTU)

HTTP Proxy

HTTPS Proxy

Bypass Proxy for

- Functionality**

This feature allows users to configure the HTTP/HTTPS proxy. The user can specify the HTTP or HTTPS proxy URL for the phone to send packets to. The proxy server will act as an intermediary to route the packets to the destination.

- New P Values**

Pvalue	Description	Value Range	Default
1552	HTTP Proxy	String: Maxlength 256 characters	(Null)
1553	HTTPS Proxy	String: Maxlength 256 characters	(Null)
22011	Bypass Proxy for	String: Maxlength 256 characters	(Null)

SIP TIMER B

- Web Configuration**

Users can find the configuration section in Web -> Profiles-> SIP Settings->Basic Settings.

SIP TIMER D

SIP TIMER B

SIP TIMER F

- **Functionality**

This feature allows users to configure SIP Timer B. User could config Timer B as defined in RFC 3261. Range 0-128 sec. Default is 0.

- **New P Values**

Pvalue	Description	Value Range	Default
60074 60174 60274 60374	SIP Timer B	Number: 0 - 128	0

SIP TIMER F

- **Web Configuration**

Users can find the configuration section in Web -> Profiles-> SIP Settings->Basic Settings.

SIP TIMER B

SIP TIMER F

Remove OBP from Route ☒ No ☐ Yes

- **Functionality**

This feature allows users to configure SIP Timer F. User could config Timer F as defined in RFC 3261. Range 0-128 sec. Default is 0.

- **New P Values**

Pvalue	Description	Value Range	Default
60075 60175 60275 60375	SIP Timer F	Number: 0 - 128	0

ENHANCEMENT

- Changed the default value of "Disable Weak TLS Cipher Suites" (P8536) to "8 - Disable All Of The Above Weak TLS Ciphers Suites."
- Changed the default value of "Minimum TLS Version" (P22293) to "12 - TLS 1.2."
- Added support for debug info containing security-related logs in Syslog.
- Enhanced security by using an Ed25519 public key instead of an RSA 2048 public key.
- Changed the default value of "Profile Active" (P271/401/501/601) to "0 - No."
- Changed the default value of "Enable FXS" (P4595-4626, P21384-21399) to "0 - No."
- Changed the default value of "Use Random SIP Port" (P20501-25054) to "1 - Yes."
- Changed the default value of "Use Random RTP Port" (P20505-20508) to "1 - Yes."
- Added support for a new option value "13 - TLS 1.3" for "Minimum TLS Version" (P22293) and "Maximum TLS Version" (P22294).
- Added support for RFC8760.
- Added support for enabling TR069 through the management interface. [Enable TR069 Through Management Interface].
- Added support for enabling RADIUS through the management interface. [Enable Radius Through Management Interface].
- Added support for Vonage IVR diagnostics.
- Added support for an IVR prompt when the WAN cable is disconnected.
- Enhanced security for unauthorized interface access.
- Enhanced security for Multiple X-Frame-Options and X-Content-Type-Options Header Entries.
- Enhanced security for shell injection with SSH ping/traceroute commands.

- Enhanced security for command injection in the GDMS doorman.

BUG FIX

- Fixed an issue with the certificate expiration warning.
- Fixed a bug that allowed the device to track the CSeq on a per-call basis.

NEW FEATURES OVERVIEW

This section lists major new features and describes how to use them from the user's point of view.

Enable TR069 Through Management Interface

- Web Configuration**

Users can find the configuration section in Web -> Maintenance -> Network Settings-> Network Settings for Management Interface.

Enable SNMP Through Management Interface	☐ Enabled ☒ Disabled
Enable TR069 Through Management Interface	☐ Enabled ☒ Disabled
Enable Syslog Through Management Interface	☐ Enabled ☒ Disabled

- Functionality**

This feature allows users to configure Enable TR069 Through Management Interface, whether to route the TR069 packets through the management interface.

- New P Values**

Pvalue	Description	Value Range	Default
8607	Enable TR069 Through Management Interface	Number: 0 - Disabled 1 - Enabled	0 - Disabled

Enable Radius Through Management Interface

- Web Configuration**

Users can find the configuration section in Web -> Maintenance -> Network Settings-> Network Settings for Management Interface.

Enable Syslog Through Management Interface	☐ Enabled ☒ Disabled
Enable Radius Through Management Interface	☐ Enabled ☒ Disabled
IP Address Mode for Management Interface	☒ DHCP ☐ Static IP

- **Functionality**

This feature allows users to configure Enable Radius Through Management Interface, whether to route the web access radius packets through the management interface

- **New P Values**

Pvalue	Description	Value Range	Default
28793	Enable Radius Through Management Interface	Number: 0- Disabled 1- Enabled	0 - Disabled

FIRMWARE VERSION 1.0.31.2

ENHANCEMENT

- Added support for OpenVPN TLS Key. [OpenVPN TLS Key]
- Added support for remote access to WebUI via GDMS.
- Added support for the Israel time zone with daylight saving time (DST).
- Enhanced Hunting Group Ringing Strategies.
- Added new option "2 - Parallel" to Hunting Group Type (P4395/4396/4397/4398).
- Update the name of "Request URI Routing ID" (P4669-4700, P21704-21719) to "Routing ID".
- Added support for assigning multiple DIDs per FXS port. [Routing ID Matching Type]
- Added the ability to save time to the timefile periodically.
- Added support for hostname validation in certificates. [Functionality]
- This feature allows users to configure the different Routing ID Matching Types.

- **New P Values**

Pvalue	Description	Value Range	Default
28859	Routing ID Matching Type	Number:	0 - Request URI
-		0 - Request URI	
28906		1 - To Header	

- Validate Hostname in Certificate]
- Added support for the MTU feature. [Maximum Transmission Unit (MTU)]

BUG FIX

- Fixed an issue where call transfers would drop after one minute.
- Fixed the device showing LCD "ff: VoIP Failed" and "IP Changed" Errors.
- Fixed call hold failure after attended transfer when SRTP is forced and enabled.
- Fixed SRTP re-negotiation failure during call forwarding, which caused disconnections.
- Fixed error prompts when modifying network connection settings from the login screen.
- Fixed issue where the device could not change passwords via ACS.
- Fixed failure to download the cfg file when triggering from the Metaswitch portal.
- Fixed "VoIP failed" message during provisioning.
- Fixed malformed DHCP Packets.
- Fixed incorrect CSeq tracking and decrementing during call forking.
- Fixed issue where the device sent INVITE to the incorrect proxy.
- Fixed outbound call retry failure when the primary outbound proxy was unreachable.
- Fixed TLS call failure due to domain name authentication issue, which caused SigControl to hang and the call to not release properly.
- Fixed issue where the device failed to validate the certificate with the outbound proxy.
- Fixed issue where devices with failback enabled attempted failback during active calls.
- Fixed DNS SRV failover failure when "Check Domain Certificates" is enabled.
- Fixed a device crash issue.
- Fixed failure to obtain IP address via PPPoE.
- Fixed issue where the device would automatically send BYE a few seconds after receiving a PSTN call.
- Fixed an issue with fax sending failure.

NEW FEATURES OVERVIEW

This section lists major new features and describes how to use them from the user's point of view.

OpenVPN TLS Key

- **Web Configuration**

Users can find the configuration section in Web -> Maintenance -> VPN-> OpenVPN® Settings.

OpenVPN® Client Key Password

OpenVPN® TLS Key

OpenVPN® TLS Key Type ▼

OpenVPN® Additional Options

- **Functionality**

This feature allows users to configure the OpenVPN® TLS Key and OpenVPN® TLS Key type.

- **New P Values**

Pvalue	Description	Value Range	Default
22371	OpenVPN® TLS Key	String: Max Length: 8192	(Null)
22457	OpenVPN® TLS Key Type	Number: 0 – None, 1 – TLS-Auth, 2 – TLS-Crypt.	0 - None

Routing ID Matching Type

Users can find the configuration section in Web -> FXS Ports->Advanced Port Settings.

Routing ID	Routing ID Matching Type

Pvalue	Description	Value Range	Default
28859 - 28906	Routing ID Matching Type	Number: 0 - Request URI 1 - To Header	0 - Request URI

Validate Hostname in Certificate

- **Web Configuration**

Users can find the configuration section in Web -> Maintenance -> Upgrade and Provisioning.

Always send HTTP Basic Authentication Information ☐ Yes ☒ No

Validate Hostname in Certificate ☐ Yes ☒ No

Upgrade via ☐ TFTP ☒ HTTP ☐ HTTPS ☐ FTP ☐ FTPS

- **Functionality**

This feature allows users to configure the Validate Hostname in Certificate. Users could validate the hostname in the SSL certificate.

- **New P Values**

Pvalue	Description	Value Range	Default
22030	Validate Hostname in Certificate	Number: 0 – No, 1 – Yes.	0 – No

Maximum Transmission Unit (MTU)

- **Web Configuration**

Users can find the configuration section in Web -> Maintenance -> Network Settings->Advanced Network Settings.

Advanced Network Settings

Maximum Transmission Unit (MTU)

- **Functionality**

This feature allows users to configure the Maximum Transmission Unit (MTU). User could configure the MTU in bytes. The default value is 1500 bytes, and the Range is 576-1500 bytes.

- **New P Values**

Pvalue	Description	Value Range	Default
244	Maximum Transmission Unit (MTU)	Number: 576 –1500	1500

- GXW4248 V2 firmware file name: gxw4248v2fw.bin
MD5: 9a368a6ede604810f625d0661655ecb2

ENHANCEMENT

- Added the ability to detect the connection status of FXS ports.
- Implemented security enhancements for GXW devices.

BUG FIX

- Fixed issues with the SR140 faxing platform.
- Fixed the device is not using DNS replies.
- Fixed Zoom ZPLS issues on the GXW42xx V2.

FIRMWARE VERSION 1.0.29.7

PRODUCT NAME

GXW4216 V2, GXW4224 V2, GXW4232 V2, GXW4248 V2

DATE

01/20/2025

- GXW4248 V2 firmware file name: gxw4248v2fw.bin
MD5: e42db06e096bafcaa59ecb38be4b36a1

ENHANCEMENT

- Added support for Firmware Upgrade Via Resync SIP NOTIFY.
- Added the "Enable/Disable Access" option to the LCD Menu. (LCD->Settings->Advance Settings->Security-> Enable/Disable Access)
- Added support for Subscribe Retry Wait Time upon 403 Forbidden. [Subscribe Retry Wait Time upon 403 Forbidden]
- Added support for a "No Key Offhook Auto-dial number" field to trigger off-hook auto-dial when uncompleted numbers. [Special Auto Dial Number for an Incomplete Dial by User]
- Renamed "OnHook DC Feed Current" (P28192/28193/28194/28195) to "Maximum DC Feed Current".
- Added support to initiate a Re-Invite for fax transmission when the fax machine is the sender. [Re-INVITE Upon CNG Count]
- Updated "Blacklist" to "Block list".
- Added support OpenVPN® failover option. [OpenVPN® Server Secondary]
- Security enhancements for GXW devices.
- Removed unnecessary files to optimize firmware size.

BUG FIX

- Fixed a bug that caused the blind transfer not to work.
- Fixed device could hear the voicemail reminder with the Offhook Auto-dial enabled.
- Fixed an issue caused by failure to apply the configuration using an XML template.
- Fixed: OpenVPN settings do not remain after turning off the device.
- Fixed the WebUI access issues due to caching.
- Fixed device failed to look up the internal DNS record.
- Fixed device does not Pulse dial correctly out of FX2 when using Swedish protocol.
- Fixed device fails due to a segmentation fault (SIGSEGV) during SIP registration.

NEW FEATURES OVERVIEW

This section lists major new features and describes how to use them from the user's point of view.

Subscribe Retry Wait Time upon 403 Forbidden

- **Web Configuration**

Users can find the configuration section in Web -> Profile -> SIP Settings-> Basic Settings.

SUBSCRIBE for MWI ☐ No ☒ Yes

Subscribe Retry Wait Time up on 403 Forbidden

Enable 100rel ☒ No ☐ Yes

- **Functionality**

This feature allows users to configure the Subscribe Retry Wait Time upon 403 Forbidden. This specifies the wait time to retry subscribe after receiving 403 Forbidden. The valid range is 0 to 10080 minutes; the default is 0. If the value is not 0, the device will retry 10 times first, then wait for the specified time before trying again. If the value is 0, the device will follow the "Retry-After" header if present. Otherwise, the device will wait 20 minutes before subscribing again.

Pvalue	Description	Value Range	Default
60068 60168 60268 60368	Subscribe Retry Wait Time upon 403 Forbidden	Number: 0 - 10080	0

Special Auto Dial Number for an Incomplete Dial by User

- **Web Configuration**

Users can find the configuration section in Web -> Profile -> Call Settings.

Off-Hook Auto-Dial Delay

Special AutoDial number for an incomplete dial by user

- **Functionality**

This feature allows users to configure the Special AutoDial number for an incomplete dial by user. This number will be dialed if the dialed number is incomplete as per dialplan rules and no key entry has timed out.

Pvalue	Description	Value Range	Default
28918 28919 28920 28921	Special AutoDial number for an incomplete dial by user	String: Maximum length: 64 characters	(Null)

Re-INVITE Upon CNG Count

- **Web Configuration**

Users can find the configuration section in Web -> Profile -> Fax Settings.

Send Re-INVITE After Fax Tone ☐ No ☒ Yes

Re-INVITE Upon CNG Count

- **Functionality**

This feature allows users to configure the Re-INVITE Upon CNG Count. If the value is 0, this feature is disabled; if the value is equal to or greater than 1, ATA will initiate a Re-Invite request when the CNG count is reached. The valid range is [0, 6].

Pvalue	Description	Value Range	Default
28923 28924 28925 28926	Re-INVITE Upon CNG Count	Number: 0 - 6	0

OpenVPN® Server Secondary

Users can find the configuration section in Web -> Maintenance-> VPN.

OpenVPN® Server Secondary Address

OpenVPN® Secondary Port

Randomly Select Server ☐ Yes ☒ No

- **Functionality**

This feature allows users to configure the OpenVPN® Server Secondary Address for the failover. The user could set the OpenVPN® Server Secondary Address and Port and decide if to enable the Randomly Select Server. If it is enabled, a server will be randomly selected in the configuration to start OpenVPN® requests. If closed, requests will be made in the order of server configuration.

Pvalue	Description	Value Range	Default
22597	OpenVPN® Server Secondary Address	String: Maximum length: 253 characters	(Null)
22598	OpenVPN® Secondary Port	Number: 1 - 65535	1194
22599	Randomly Select Server	Number: 0 – No 1 – Yes	0 - No

FIRMWARE VERSION 1.0.27.3

PRODUCT NAME

GXW4216 V2, GXW4224 V2, GXW4232 V2, GXW4248 V2

MD5: 034eafd51f3870d82f2ad1c7b0738119

ENHANCEMENT

- Added support to Enable/Disable WEB access through the IVR.
- Added support for the “Switch SIP Server When Keep-Alive Max Lost Is Reached”. [Switch SIP Server When Keep-Alive Max Lost Is Reached]
- Added support for Conference Notification Tone. [Conference Notification Tone]
- Added support for Remote On Hold Tone. [Remote On Hold Tone]
- Added support for Ringing Transfer. [Ringing Transfer]
- Added RTCP keep alive feature. [RTP/RTCP Keep Alive On Hold]
- Added ability to support Authentication based on Username/Password on OpenVPN. [OpenVPN Username/Password]
- Added support to configure static DNS SRV records. [Static DNS]
- Removed the complex admin password requirements.
- Added support for the Strict Password Rules. [Strict Password Rules]
- Added support Add XMPP-based connection request.
- Added support for the secondary NTP server. [Secondary NTP server]
- Added ability to set local date and time. [Local Time]
- Added support for setting the T.38 Max Bit Rate. [T.38 Max Bit Rate].
- Update the “SIP Registration Failure Retry Wait Time upon 403 Forbidden” max values to 10080 minutes.
- Added support to save syslog settings and internal logs across a factory reset. P82307 Syslog Setting and Internal Logs Protection. (0- No, 1- Yes. The default is 0. Check the config template for details).

BUG FIX

- Fixed device couldn't failover to the secondary SIP server when the shorter timer is set up.
- Fixed a DTMF transmission failure issue.
- Fixed device syslog has no timestamp sometimes when using Audio Codes syslog viewer.
- Fixed sends RTP/AVP in the 200 OK over SRTP outbound calls.
- Fixed an issue that caused the call to get ended by the server after 30 minutes on hold.
- Fixed a bug that caused an Inbound SRTP call to fail with "488 Not Acceptable Here" due to an index value of 88 used by NetSapiens.
- Fixed a registration spamming issue.
- Fixed device does not show the Port extension number and values when downloading the MIB from SNMP.
- Fixed device in probability of fax failure occurs when using UCM and PSTN at T38.
- Fixed unit can't establish SRTP Session after re-invite.
- Fixed WebUI is getting slow after uploading custom Certificate Authority (CA).

NEW FEATURES OVERVIEW

This section lists major new features and describes how to use them from the user's point of view.

Switch SIP Server When Keep-Alive Max Lost Is Reached

- **Web Configuration**

Users can find the configuration section in Web -> Profile -> Call Settings.

- **Functionality**

This feature allows users to configure Switch SIP Server When Keep-Alive Max Lost Is Reached. If set to "Yes", the SIP extension will switch SIP server immediately when max lost packets of SIP OPTIONS/NOTIFY keep-alive is reached.

Pvalue	Description	Value Range	Default
28907	Switch SIP Server When Keep-Alive Max Lost Is Reached	Number:	0 - No
28908		0 - No	
28909		1 - Yes	
28910			

Conference Notification Tone

- **Web Configuration**

Users can find the configuration section in Web -> Advanced Settings -> Ring Tones.

Conference Party Hangup Tone	f1=425@-15,c=600/600;
Conference Notification Tone	
Special Proceed Indication Tone	f1=350@-13, f2=440@-13, c=750/750-0/0;

- Functionality**

This feature allows users to configure the Conference Notification Tone.

Pvalue	Description	Value Range	Default
7077	Conference Notification Tone	String: MaxLength is 256 Characters	(Null)

Remote On Hold Tone

- Web Configuration**

Users can find the configuration section in Web -> Advanced Settings -> Ring Tones.

Special Condition Tone	f1=350@-13, f2=450@-13, c=750/750;
Remote On Hold Tone	

- Functionality**

This feature allows users to configure the Remote On Hold Tone

Pvalue	Description	Value Range	Default
28858	Remote On Hold Tone	String: MaxLength is 256 Characters	(Null)

Ringling Transfer

- Web Configuration**

Users can find the configuration section in Web -> Profile -> Call Settings.

Transfer on Conference Hangup	☒ No ☐ Yes
Ringling Transfer	☒ No ☐ Yes
Send Hook Flash Event	☒ No ☐ Yes

- Functionality**

This feature allows users to configure the Ringling Transfer. It defines whether the call is transferred to the other party when the transferring party hangs up while listening to the ringback tone.

Pvalue	Description	Value Range	Default
4820	Ringing Transfer	Number:	0 - No
4821		0 - No	
4822		1 - Yes	
4823			

RTP/RTCP Keep Alive On Hold

- Web Configuration**

Users can find the configuration section in Web -> Profile-> Call Settings.

The image shows a web configuration interface with three settings:

- RFC2543 Hold**: Radio buttons for No and Yes, with Yes selected.
- RTP/RTCP Keep Alive On Hold**: Radio buttons for No and Yes, with No selected.
- Disable Call Waiting**: Radio buttons for No and Yes, with No selected.

- Functionality**

This feature allows users to configure the RTP/RTCP Keep Alive On Hold. If yes, continue to send RTP/RTCP packets to keep alive when the call is on hold.

Pvalue	Description	Value Range	Default
28839	RTP/RTCP Keep Alive On Hold	Number:	0 – No
28840		0 – No	
28841		1 – Yes	
28842			

OpenVPN Username/Password

- Web Configuration**

User can find the configuration section in Web -> Maintenance-> VPN.

The image shows a web configuration interface for OpenVPN with the following fields and buttons:

- OpenVPN Digest**: A dropdown menu currently set to "SHA1 Default".
- OpenVPN Username**: A text input field.
- OpenVPN Password**: A text input field.
- OpenVPN CA**: A label above two buttons: "Upload" and "Delete".

- Functionality**

Configures OpenVPN authentication username and password.

Pvalue	Description	Value Range	Default
8394	OpenVPN Username	String: Maxlength is 32 Characters	(Null)
8395	OpenVPN Password	String: Maxlength is 32 Characters	(Null)

Static DNS

- Web Configuration**

Users can find the configuration in Web UI -> Advanced Settings -> Static DNS.

Static DNS

Strict Password Rules

- Web Configuration**

Users can find the configuration section in Web -> Maintenance->Web/SSH Access.

Strict Password Rules

Enable strict password rules ☐ No ☒ Yes

Minimum password length

Required character classes

Allowed character classes

Access Control Lists

- Functionality**

This feature allows users to enable or disable the strict password rules, set the minimum password length, set the required number of character classes, and select the allowed character classes.

Pvalue	Description	Value Range	Default
28788	Enable strict password rules	0 – No 1 – Yes	0 – No
28790	Minimum password length	Number: 4 - 30	8

28791	Required number of character classes	Number: 0 - 3	3
28792	Allowed Character classes	Number: 7 – Lower case, upper case, numbers, 3 – Lower case, upper case, 5 – Lower case, numbers 6 – Upper case, numbers 11 – Lower case, upper case, special characters 13 – Lower case, numbers, special characters 14 – Upper case, numbers, special characters 9 – Lower case, special characters 10 – Upper case, special characters 12 – Numbers, special characters 1 – Lower case 2 – Upper case 4 – Numbers 8 – Special characters 15 - Lower case, upper case, numbers, special characters	7

Secondary NTP server

User can find the configuration section in Web -> Maintenance-> Date and Time.

NTP Server	pool.ntp.org
Secondary NTP Server	
NTP Update Interval	60

- Functionality**

This feature allows users to configure the Secondary NTP Server. It defines the URL or IP address of the NTP server. The gateway may obtain the date and time from the server.

Pvalue	Description	Value Range	Default
8333	Secondary NTP Server	String: Server address	(Null)

Local Time

User can find the configuration section in Web -> Maintenance-> Date and Time.

Self-Defined Time Zone

Allow DHCP Option 2 to override time zone ☐ No ☒ Yes

Local Time

- **Functionality**

This feature allows users to set device time from the host PC time via the browser. After clicking the bottom “Sync PC”, the device will pop up a window that will notice it synchronizes the local time.

Pvalue	Description	Value Range	Default
	Local Time	Button	(Null)

T.38 Max Bit Rate

- **Web Configuration**

User can find the configuration section in Web -> Profile-> Fax Settings.

Enable Silence Detection for Fax Disconnect ☐ No ☒ Yes

T.38 Max Bit Rate

- **Functionality**

This feature allows users to select the maximum T. 38 bit rate. Lowering the maximum fax bit rate may help improve the fax success rate. Only effective when the fax machine is a fax receiver.

Pvalue	Description	Value Range	Default
28913	T.38 Max Bit Rate	Number:	2 - 9600bps
28914		1 - 4800bps	
28915		2 - 9600bps	
28916		3 - 14400bps	

FIRMWARE VERSION 1.0.25.2

PRODUCT NAME

GXW4216 V2, GXW4224 V2, GXW4232 V2, GXW4248 V2

DATE

05/23/2024

FIRMWARE FILE INFORMATION

- GXW4216 V2 firmware file name: gxw4216v2fw.bin
MD5: cd93ffcd8047010f26502ac5cd80c1ec
- GXW4224 V2 firmware file name: gxw4224v2fw.bin
MD5: 9d43e89edf4099cfd0a9d7ce8e50dcd8
- GXW4232 V2 firmware file name: gxw4232v2fw.bin
MD5: 934109f2261cbe2518f71f1af9972044
- GXW4248 V2 firmware file name: gxw4248v2fw.bin
MD5: 0dd2b4994c174df158aae106e4fd8de8

ENHANCEMENT

- Add IVR support to check the device's individual certificate information.
- Add support of variable \$PN and \$MAC in Config Server Path.

BUG FIX

- Fixed unit can't establish SRTP Session after re-invite.
- Fixed a bug that caused the GXW device not to request the config file until a reboot.
- Fixed device continues to send the same credentials after the server responds with a 403 Forbidden.
- Fixed web UI wording change request for DNS SRV failover.
- Fixed device could use weak ciphers/key exchange for SSH.

FIRMWARE VERSION 1.0.25.1

MD5: eae705ecc47ee06a2410931740feff74

ENHANCEMENT

- Set the “Disable User Level Web Access” (P28158) to “Yes” by default.
- Set the “Disable Viewer Level Web Access” (P28159) to “Yes” by default.
- Force user to change the password upon first login using the default password to the Admin/User/Viewer Account.

BUG FIX

- Fixed an issue in the “Prompt Dial Tone Code” feature.

FIRMWARE VERSION 1.0.23.2

ENHANCEMENT

- Added Support for "Keep Security Setting After Reset". [Keep Security Setting After Reset]

BUG FIX

- Fixed a bug that caused SRTP to decrypt RTP fail causing one-way audio after a 20+ minute call.
- Fixed an issue in no audio on 200ok/ack with UAS on outbound calls.
- Fixed a bug that caused the device cannot connect to the OpenVPN server.
- Fixed unit can't establish SRTP Session after re-invite.
- Fixed the users' report of heavy static noise in the FXS TX audio.
- Fixed the inaccurate encoding and decoding of DTMF durations with SIP Info.
- Fixed the remote party perceived echo issue.
- Fixed a bug that caused DDNS does not work.
- Fixed unit stops responding after a couple of hours.
- Fixed an echo issue on the answering machine.

NEW FEATURES OVERVIEW

This section lists major new features and describes how to use them from the user's point of view.

Keep Security Setting After Reset

User can find the configuration section in Web -> Maintenance-> Security Settings-> Security

Validate Server Certificates
☒ No
 ☐ Yes

Keep Security Setting After Reset
☒ No
 ☐ Yes

Disable Weak TLS Cipher Suites

- **Functionality**

This feature depends on the reset lock feature. If enabled, security-related settings and trusted CA-related settings will be kept during different kinds of resetting.

Pvalue	Description	Value Range	Default
28849	Keep Security Setting After Reset	Number: 0 - No 1 - Yes	0 - No

FIRMWARE VERSION 1.0.21.2

MD5: 24a04dcc6af08a0ae1e8acbf560f0ce0

ENHANCEMENT

- Added a “Provision” button which lets user provision manually via WebUI (Maintenance->Upgrade and Provisioning).
- Changed the order of download config file requests to cfgMAC.xml, cfgMAC, cfgMODEL.xml, and cfg.xml.

BUG FIX

- Fixed a bug that caused DDNS not to work.
- Fixed a bug that caused the unit to stop responding after a couple of hours.
- Fixed an Issue with the registration.
- Fixed inaccurate encoding and decoding of DTMF durations.
- Fixed inaccurate encoding and decoding of DTMF durations with SIP Info.
- Fixed an issue to lock/unlock extensions from analog phones using local feature code.

FIRMWARE VERSION 1.0.19.1

PRODUCT NAME

GXW4216 V2, GXW4224 V2, GXW4232 V2, GXW4248 V2

DATE

10/18/2023

FIRMWARE FILE INFORMATION

- GXW4248 V2 firmware file name: gxw4248v2fw.bin
MD5: 6faa1612321d88bd8415b21fe8ad141c

ENHANCEMENT

- Added new value "4 - Auto" in NAT Traversal(P52/730/630/614).
- Added support AVS DTMF Detector Parameter. [AVS DTMF Detector Parameters]
- Add the ability to force local ringback tone with 180 ringing SDP. [Use P-Early-Media Header]
[Ringback Tone at No Early Media]
- Added support Radius auth protocol. [RADIUS Auth Protocol]
- Add ability to lock/unlock extension from analog phones using local feature code.[Lock/Unlock
Extension Code]

BUG FIX

- Fixed NAT Traversal does not have the "Auto" option.
- Fixed device the ringing frequency is "C=100/100;", unable to answer.
- Fixed device sends registration information all the time.
- Fixed device produces core dump file when config Internet Protocol to "Both, prefer IPv6".
- Fixed FXS18 off hook failed after long time performance.
- Fixed the Call Waiting CID cannot be displayed.
- Fixed an echo issue during the call.
- Fixed wrong time when using DHCP option 2 for Timezone.
- Fixed device does not process DTMF on early media stage.
- Fixed the admin/Viewer/user password containing 'spaces' can be saved but not effective.
- Fixed using G723 to make phone calls and generate core files.
- Fixed unable to show caller ID when the number begins with "#".

- Fixed device didn't play DTMF tone when auxiliary equipment only supports in audio.
- Fixed AVS misreporting DTMF information during FXS calls.
- Fixed the Inaccurate encoding and decoding of DTMF durations with SIP Info.
- Fixed the DTMF tones cause device to not send audio.
- Fixed the poor echo processing during a call.
- Fixed device sends a fax to the auxiliary, and the response to be tested is 500.
- Fixed when the device starts requesting files, the LCD keeps flashing after turning off the server, and the page cannot be restarted.
- Fixed inaccurate encoding and decoding of DTMF durations.
- Fixed Gateway does not use NTP server from DHCP option 42.
- Fixed provisioning will reset some parameters.

NEW FEATURES OVERVIEW

This section lists major new features and describes how to use them from the user's point of view.

AVS DTMF Detector Parameters

User can find the configuration section in Web -> Profile-> Audio Settings.

DSP DTMF Detector Min Level	-25 dBm
DSP DTMF Detector SNR	1
DSP DTMF Detector Deviation	25 %
DSP DTMF Detector Twist	5 dB

• Functionality

This feature allows users to configure the AVS DTMF detector related parameters. DSP DTMF Detector Min Level sets the minimum level required for DTMF tone to be considered valid, DSP DTMF Detector SNR sets the Maximum signal-to-noise ratio required for DTMF tone to be considered valid, DSP DTMF Detector Deviation sets the deviation, above and below the central frequency, DSP DTMF Detector Twist sets the maximum value by which one frequency energy level can surpass another frequency energy level.

Pvalue	Description	Value Range	Default
28804 28805 28806 28807	DSP DTMF Detector Min Level	Number: -45 – 0	-25
28808 28809 28810 28811	DSP DTMF Detector SNR	Number: 0 – 2	1

28812	DSP DTMF Detector Deviation	Number: 0 – 25	25
28813			
28814			
28815			
28816	DSP DTMF Detector Twist	Number: 0 – 12	5
28817			
28818			
28819			

Use P-Early-Media Header

User can find the configuration section in Web -> Profile-> SIP Settings-> Basic Settings.

Use P-Asserted-Identity Header ☒ No ☐ Yes
 Use P-Early-Media Header ☒ No ☐ Yes
 SIP REGISTER Contact Header Uses ☒ LAN Address ☐ WAN Address

• Functionality

This feature allows users to configure the Use P-Early-Media Header. It controls whether the P-Early-Media Header support is enabled.

Pvalue	Description	Value Range	Default
60072	Use P-Early-Media Header	Number: 0 – No 1 – Yes	0 – No
60172			
60272			
60372			

Ringback Tone at No Early Media

User can find the configuration section in Web -> Profile-> Call Settings.

Callee Flash to 3WC ☒ No ☐ Yes
 Ring Timeout 60
 Ringback Tone at No Early Media ☒ No ☐ Yes
 Delayed Call Forward Wait Time 20

• Functionality

This feature allows users to configure the Ringback Tone at No Early Media. If yes, play ringback tone

when there is no receiving early media RTP packets.

Pvalue	Description	Value Range	Default
60073	Ringback Tone at No Early	Number:	0 – No
60173	Media	0 – No	
60273		1 – Yes	
60373			

RADIUS Auth Protocol

User can find the configuration section in Web -> Maintenance-> RADIUS.

Action upon RADIUS Auth Server Error ☐ Reject Access ☒ Authenticate Locally

RADIUS Auth Protocol PAP

RADIUS Auth Server Address

RADIUS Auth Server Port

PAP
 CHAP
 MsCHAPv1
 MsCHAPv2

- Functionality**

This feature allows users to configure RADIUS authentication protocol.

Pvalue	Description	Value Range	Default
28803	RADIUS Auth Protocol	Number: 0 – PAP 1 – CHAP 2 – MsCHAPv1 3 – MsCHAPv2	0 – PAP

User can find the configuration section in Web -> Advanced Settings-> System Features.

Prompt Dial Tone Code

Port Lock Code

Play Busy Tone When Account is unregistered ☒ No ☐ Yes

- Functionality**

This feature allows users to configure with star code to unlock port 1- 48 with the dial out code. The default is *21. The user is required to press *21 and the four-digit locking code twice to set the lock code. To make a call, the user requires to press *21 and then the locking code and then the actual number to dial out. If there is no locking code, the user dials out the actual number to make a call.

Pvalue	Description	Value Range	Default
24848	Port Lock Code	String: Digital Min Length 0 character Max Length 2 characters	21

Lock/Unlock Extension Code

User can find the configuration section in Web -> FXS Ports-> Advanced Port Settings.

Advanced Port Settings

Port	Offhook Auto-dial	Hunting Group	Request URI Routing ID	Lock/Unlock extension code
FXS 1		None ▾		
FXS 2		None ▾		
FXS 3		None ▾

ENHANCEMENT

- Updated the “Replace Beginning '+' in Caller ID with” support a predefined string. (Pvalue changed from P29073/29173/29273/29373 to P60083/60183/60283/60383). [Replace the beginning '+' in Caller ID with]
- Added the new option “3 - PR” in “Visual MWI type(P4371/4372/4373/4374)” which sends MWI signaling using Polarity Reversal.
- Added support the “ = ” sign in config and firmware server path.
- Updated “Prefer Primary SIP Server(P4567/4568/4569/4570)” options “1 – Yes” to “1 - Will register to primary server if failover server registration expires, and 2 - Will register to primary server if primary server responds”.

BUG FIX

- Fixed device didn't support TLS1.
- Fixed device unable to import mib file to PRTG.
- Fixed the inaccurate encoding and decoding of DTMF durations with SIP Info.
- Fixed device unit sends cancel to sip server during IP call.
- Fixed MWI with NEON does not work when using ETSI-DTMF.
- Fixed SIP Server cannot contain hyphens.
- Fixed gateway fails to authenticate web access using the Radius server.
- Fixed system prompt "incorrect password" despite keying the correct PIN code for outbound calls.
- Fixed login to the web using GXW4248V2, some functions in French and Spanish are not translated.

NEW FEATURES OVERVIEW

This section lists major new features and describes how to use them from the user's point of view.

Replace the beginning '+' in Caller ID with

User can find the configuration section in Web -> Profile-> Call Settings.

Anonymous Call Rejection ☒ No ☐ Yes

Replace Beginning '+' in Caller ID with

Hunting Group Type ☒ Circular ☐ Linear

- Functionality**

This feature allows users to configure the Replace the beginning '+' in Caller ID with the configured string when sending the Caller ID to the analog phone.

Pvalue	Description	Value Range	Default
60083	Replace the beginning '+' in Caller ID with	String: number 0 - 9 Max length is 6 characters.	(Null)
60183			
60283			
60383

ENHANCEMENT

- Add the Ability to specify DTMF timing for InBand [Custom DTMF InBand Duration]

BUG FIX

- Fixed the device using a random sip port requires a reboot to take effect.
- Fixed No Audio on incoming transferred calls in external calls.
- Fixed device unit sends BYE with the wrong CSeq.
- Fixed Special Proceed Indication Tone is overridden by Special Condition Tone with GIBTELECOM ITSP.
- Fixed after closing SIP registration, re-open SIP registration, and the device sends two registration requests.
- Fixed device uploads too large error format configuration file without a prompt on the web.
- Fixed the Authenticate server certificate domain/chain option needs to be restarted to take effect.
- Fixed the wrong time when using DHCP option 2 for the time zone.

NEW FEATURES OVERVIEW

This section lists major new features and describes how to use them from the user's point of view.

Custom DTMF InBand Duration

User can find the configuration section in Web -> Profile-> Audio Settings.

DTMF Payload Type

101

Custom DTMF InBand Duration

Duration: 0 ms, Inter Duration: 50 ms

- Functionality**

This feature allows users to configure the Custom DTMF InBand Duration. If "Duration" is 0, the gateway will totally pass-through transfer the InBand DTMF from the analog agent side; If "Duration" is not 0, we can use this feature to customize the duration and inter-duration of InBand DTMF; The valid range of "Duration" is 0 or 40~2000ms, the valid range of "Inter-Duration" is 40~2000ms.

Pvalue	Description	Value Range	Default
28134	Custom DTMF InBand Duration: Duration	Number: 0 or 40~2000 (ms)	0
28135			
28136			
28137			
28138	Custom DTMF InBand Duration: Inter Duration	Number: 0 or 40~2000 (ms)	50

ENHANCEMENT

- Added support for the MWI Tone. [MWI Tone]
- Added support for the Special Proceed Indication Tone. [Special Proceed Indication Tone].
- Added support for the Special Condition Tone. [Special Condition Tone]
- Add the ability to ignore the alert-info header. [Ignore Alert-Info Header]
- Added support for "Extra Debug" in Syslog Level.
- Update the status page to show the HW version with the model's name.
- Added the ability to configure special features with GIBTELECOM via TR069.

BUG FIX

- Fixed the device cannot log in to the web if the password length exceeds 18 characters.
- Fixed after closing SIP registration, re-open SIP registration, and the device sends two registration requests.
- Fixed the Inbound long-duration call fails under certain configurations.
- Fixed Config Server Path does not support the "+" character.
- Fixed an off-hook delay problem that occurs when the FAX runs for a long period.
- Fixed device the off hook not detected during ringing.
- Fixed device with no dial tone when pressing Flash+4 to make a transfer.
- Fixed when the failover SIP server address is domain name plus port registration, and the sending destination port is wrong.
- Fixed device unit does not allow/send DTMF A B C D digits.
- Fixed an issue that no audio for the second call received.

- Fixed a bug in which Syslog is enabled on the HT device in the local deployment, and the content of the syslog package is empty.
- Fixed the authenticate server certificate domain/chain option needs to be restarted to take effect.
- Fixed an issue that causes DTMF data sent in disorder.
- Fixed Registration with a random port after a reboot.
- Fixed the product model display error on the status page in other languages except in English.

NEW FEATURES OVERVIEW

This section lists major new features and describes how to use them from the user's point of view.

MWI Tone

User can find the configuration section in Web -> Profile-> Call Settings.

Visual MWI Type ☒ FSK ☐ NEON

MWI Tone ☒ Default ☐ Special Proceed Indication Tone

Transfer on Conference Hangup ☒ No ☐ Yes

• Functionality

This feature allows users to configure the MWI tone for the voice mail, the device will play the MWI tone when the user picks up. The default is the Stuttgart dial tone.

Pvalue	Description	Value Range	Default
28197	MWI Tone	0 – Default	0 – Default
28198		1 – Special Proceed	
28199		Indication Tone	
28200			

Special Proceed Indication Tone

• Web Configuration

User can find the configuration section in Web -> Advanced Settings-> Ring Tones.

Conference Party Hangup Tone

Special Proceed Indication Tone

Special Condition Tone

• Functionality

This feature allows users to configure the special process indicator tone for the voice mail, the device will play the MWI tone when the user picks up. The default is the Stuttgart dial tone.

Pvalue	Description	Value Range	Default
28196	Special Proceed Indication Tone	String Max Length: 256	f1=350@-13, f2=440@-13, c=750/750-0/0;

Special Condition Tone

- Web Configuration**

User can find the configuration section in Web -> Advanced Settings-> Ring Tones.

Special Proceed Indication Tone

Special Condition Tone

- Functionality**

This feature allows users to configure the special condition tone. When a user is activated using the GIBTELECOM in the Special Feature. the SIP server sends a NOTIFY with "special-condition-tone". The "Special Condition Tone" will be played instead of the "Dial Tone".

Pvalue	Description	Value Range	Default
28211	Special Proceed Indication Tone	String Max Length: 256	f1=350@-13, f2=450@-13, c=750/750;

Ignore Alert-Info Header

User can find the configuration section in Web -> Profile-> SIP Settings-> Basic Settings

Contact with TCP/ TLS

Allow SIP Factory Reset ☒ No ☐ Yes

Ignore Alert-Info Header ☒ No ☐ Yes

SIP User-Agent

- Functionality**

This feature allows users to configure Ignore Alert-Info Header. It is configured to play the default ringtone by ignoring the Alert-Info header.

Pvalue	Description	Value Range	Default
26018	Ignore Alert-Info Header	0 – No	0 – No
26118		1 – Yes

MD5: 55a63fbf82b950774e1da645e53eceaa

ENHANCEMENT

- Added support for Download and Process All Available Config Files. [Download and Process All Available Config Files].
- Added the new voice prompt *98.
- Added the additional Flash digit events in the Special Feature Gibtelecom.
- Added support for new override config file option in "cfgMAC_override.xml".
- Added Pvalue not on WebUI:
P8615 - Disable filename in URL for config provision. (1 -Yes, 0 – No. Default is 0)
P8616 - Disable filename in URL for firmware upgrade. (1 -Yes, 0 – No. Default is 0)

BUG FIX

- Fixed the device responds with not found while configured with a non-profile1 account
- Fixed an issue that made account status under profile4 displayed incorrectly.
- Fixed device will display Registered abnormal after changing the profile ID via GDMS.
- Fixed the sip server address and port settings that do not conform to the rules can be saved.
- Fixed the Call waiting dropped by MTAS Server.
- Fixed Local RBT is not played after 180 ringing.
- Fixed the call that cannot be held the current one is valid_close SRTP_*19.
- Fixed the WebUI description error due to the Increase Password length for GXW42xx V2
- Fixed an issue that caused the FXS port test failure.
- Fixed the software stops when using the "Replace Beginning '+' with 00 in Caller ID" feature.
- Fixed DTMF Negotiation Fails Upon Transfer.

- Fixed the device cannot be started and core files are generated after several months of standby.
- Fixed Call quality data not reported after the factory reset.
- Fixed Modifying sip accounts on the web page does not report user modification.
- Fixed a bug that the device only read the first ten FXS ports' DND status.

NEW FEATURES OVERVIEW

This section lists major new features and describes how to use it from the user's point of view.

Download and Process All Available Config Files

- **Web Configuration**

User can find the configuration section in Web -> Maintenance-> Upgrade and Provisioning.

Config File Postfix

Enable using tags in URL ☒ No ☐ Yes

Download and Process All Available Config Files ☒ No ☐ Yes

Allow DHCP Option 43 and Option 66 to Override Server ☐ No ☒ Yes

- **Functionality**

This feature allows users to inverse download all config files. If set to Yes, the device will download and apply (overwrite) all available configs in the order of cfg.xml, cfgProductModel.xml, cfgMAC.xml, cfgMAC, cfgMAC_override.xml, and "DHCP option 67 bootfile".

Pvalue	Description	Value range	Default
8467	Download and Process ALL Available Config Files	0 – No 1 - Yes	0 – No

ENHANCEMENT

- Increased the Admin, User, and Viewer Password length to 30.

BUG FIX

- Fixed devices send wrong call status reports as P2P after the local three-party conference ends.
- Fixed sips TLS registration failed after filling in the Custom Certificate with the GEN 1 certificate.
- Fixed a bug that caused units to lose registration randomly.
- Fixed a ringing multiple ports behavior issue.
- Fixed devices Cannot enable the local call feature using a certain dial plan.
- Fixed the forced SRTP (*18) function is not effective when it is currently effective.
- Fixed a ringing multiple ports behavior issue.
- Fixed an issue that causes the content of the sip log file to be incomplete.
- Fixed the ACS URL does not clear up empty after reset.

FIRMWARE VERSION 1.0.7.2

ENHANCEMENT

- Added support to Define the Preferred Provisioning Method. [Configuration File Types Allowed]
- Added support of DHCP Option 150. [Additional Override DHCP Option]
- Added support for SRTP Key Length. [SRTP Key Length]
- Added support for SSL Key Log File. [With Secret Key Information]
- Added support for Security Controls for SSH Access. [Security Controls for SSH Access]
- Added support for Enable using tags in URL. [Enable using tags in URL]
- Updated Syslog to make user reading more friendly.

BUG FIX

- Fixed the device's no audio and randomly reboot issues after the upgrade.
- Fixed a ringing multiple ports behavior issue.
- Fixed devices Cannot enable the local call feature using a certain dial plan.
- Fixed a device upgrade failed issue due to out of memory.
- Fixed a fax transmission issue between GXW42xx devices.
- Fixed device ACS URL not set to "https://acs.gdms.cloud" by default.
- Fixed a bug that caused the call is abnormal after the participant transfers the call.
- Fixed device some vulnerabilities appear while scanning.
- Fixed device the status light is abnormal after the FTP upgrade fails.
- Fixed a wrong error prompt in uploading the configuration file.
- Fixed a bug that causes the device will turn off the LCD screen Led after 5 minutes.
- Fixed Uptime on French mode display abnormal on Web UI.

- Fixed a bug that causes fax T.38 always to fail with SPA112.
- Fixed device always sends DTMF event # after using # as the dial key.
- Fixed the MAC on the device info page is not fully displayed.
- Fixed VLAN name and management address identification is missing in the reporting information at startup.

NEW FEATURES OVERVIEW

This section lists major new features and describes how to use them from the user's point of view.

Configuration File Types Allowed

- **Web Configuration**

User can find the configuration in Web UI -> Maintenance-> Upgrade and Provisioning.

Authenticate Conf File ☒ No ☐ Yes

Firmware Key

Configuration File Types Allowed

- **Functionality**

This feature allows users to choose Allowed Configuration File Types, All or XML Only.

- **New P Values**

Pvalue	Description	Value range	Default
P8601	Configuration File Types Allowed	47 – All 46 – XML Only	47 – All

Additional Override DHCP Option

- **Web Configuration**

User can find the configuration in Web UI -> Maintenance-> Upgrade and Provisioning.

Allow DHCP Option 43 and Option 66 to Override Server ☐ No ☒ Yes

Additional Override DHCP Option

3CX Auto Provision ☐ No ☒ Yes

- **Functionality**

This feature allows users to configure additional DHCP Option to be used for the firmware server instead of the configured firmware server or the server from DHCP Option 43 and 66.

- **New P Values**

Pvalue	Description	Value range	Default
P8337	Additional Override DHCP Option	0 – None 1 – Option 150	0 – None

SRTP Key Length

User can find the configuration in Web UI -> Profile-> Audio Settings.

SRTP Mode Enabled But Not Forced ▾
SRTP Key Length AES 128&256 bit ▾
Crypto Life Time ☐ No ☒ Yes

- **Functionality**

This feature allows users to configure the cipher method or key length if SRTP is enabled.

- **New P Values**

Pvalue	Description	Value range	Default
P2383	SRTP Key Length	0 – AES 128&256 bit	0 - AES 128&256 bit
P2483		1 – AES 128 bit	
P2583		2 – AES 256 bit	
P2683			

With Secret Key Information

- **Web Configuration**

User can find the configuration in Web UI -> Maintenance-> Ethernet Capture.

With Secret Key Information ☐ No ☒ Yes

Status STOPPED

- **Functionality**

This feature allows users to configure whether the packet capture file contains secret key information or not.

- **New P Values**

Pvalue	Description	Value range	Default
P22419	With Secret Key Information	0 – No 1 – Yes	1 – Yes

Security Controls for SSH Access

- Web Configuration**

User can find the configuration in Web UI -> Maintenance-> Web/SSH Access.

SSH Port

Security Controls for SSH Access

Web Session Timeout

- Functionality**

This feature allows users to configure security privileges.

- New P Values**

Pvalue	Description	Value range	Default
P28210	Security Controls for SSH Access	0 – Only allow SSH private IP users to set system Pvalue 1 – Allow all SSH users to set system Pvalue 2 – Allow all SSH users to set any Pvalue 4 – Prohibit setting Pvalue	2 – Allow all SSH users to set any Pvalue

Enable using tags in URL

- Web Configuration**

User can find the configuration section in Web -> Maintenance-> Upgrade and Provisioning.

Config File Postfix

Enable using tags in URL ☒ No ☐ Yes

Allow DHCP Option 43 and Option 66 to Override Server ☐ No ☒ Yes

- Functionality**

This feature allows users to enable using tags in Config Server Path.

- New P Values**

Pvalue	Description	Value range	Default
P8609	Enable using tags in URL	0 – No 1 – Yes	1 – Yes

FIRMWARE VERSION 1.0.5.4

ENHANCEMENT

- Added support to send SNMP traffic through Management Interface. [Enable SNMP Through Management Interface]
- Added support to send Syslog traffic through Management Interface. [Enable Syslog Through Management Interface]

BUG FIX

- Fixed a bug that causes the core file to be generated after the device is turned on.
- Fixed download function of the page is display incorrect when accessing in User/Viewer account.
- Fixed device the log server domain name resolution order is incorrect.
- Fixed the copyright not translated into Russian on the Русский page.
- Fixed device will not send provision required when path contains the % character.
- Fixed the bug that causes IVR code reading is failed.
- Fixed an issue causes sometimes only one-way audio or no audio on both sides in the call.
- Fixed an issue that causes device faxes may not be sent and received normally.
- Fixed a WebUI error that causes the "Viewer Logout" button displayed as "XXXXX" in Chinese/Spanish/French language.
- Fixed an issue that causes the ATA device crash after it calls to itself.
- Fixed Dublin and Ireland are displayed incorrectly in Chinese in Time Zone.
- Fixed a bug that causes Call Waiting Tone syntax error.
- Fixed the incorrect description of 802.1X Mode.
- Fixed device the Syslog list will not be displayed when the system log level is EXTRA DEBUG.

- Fixed device cannot access the page and establish a call after unplugging and plugging the network cable on PPPoE and OpenVPN network.
- Fixed the web page lock time after the login error exceeds the limit will be timed again after clicking login again.

NEW FEATURES OVERVIEW

This section lists major new features and describes how to use them from the user's point of view.

Enable SNMP Through Management Interface

- **Web Configuration**

User can find the configuration in Web UI -> Maintenance-> Network Settings.

Management access

Management interface only

Enable SNMP Through Management Interface

☐ Enabled
 ☒ Disabled

Enable Syslog Through Management Interface

☐ Enabled
 ☒ Disabled

- **Functionality**

This feature allows users to choose whether to route the Syslog packets through management interface.

- **New P Values**

Pvalue	Description	Value range	Default
P28209	Enable SNMP Through Management Interface	1 – Enabled 0 – Disabled	0 – Disabled

Enable Syslog Through Management Interface

- **Web Configuration**

User can find the configuration in Web UI -> Maintenance-> Network Settings.

Enable SNMP Through Management Interface

☐ Enabled
 ☒ Disabled

Enable Syslog Through Management Interface

☐ Enabled
 ☒ Disabled

IP Address Mode for Management Interface

☒ DHCP
 ☐ Static IP

- **Functionality**

This feature allows users to choose whether to route the Syslog packets through management interface

- **New P Values**

Pvalue	Description	Value range	Default
P8610	Enable Syslog Through Management Interface	1 – Enabled 0 – Disabled	0 – Disabled

FIRMWARE VERSION 1.0.3.9

PRODUCT NAME

GXW4216 V2, GXW4224 V2, GXW4232 V2, GXW4248 V2

DATE

08/08/2022

FIRMWARE FILE INFORMATION

MD5: 96ae11e4682caacb20bd5ff59a8aa252

BUG FIX

- Fixed a bug that causes the device will ring with DND enabled.
- Fixed GXW4224V2 plays Priority Alert Call Waiting Tone incorrectly.
- Fixed GXW4224V2 plays Alternate Number Call Waiting Tone incorrectly.
- Fixed device cannot enable local call feature using a certain dial plan.
- Fixed the Firmware Server Path and the Config Server Path cannot save in "port/filename" format.
- Fixed the device does not prompt invalid input while entering illegal values in some parameters.
- Fixed a bug that caused the Syslog list information will not be cleared after hard key recovery.
- Fixed device off-hook LED status is wrong when LED Pattern config to A and existing voice mail.
- Fixed DTMF data sent in disorder.
- Fixed pressing flash +2 will hang up the other party's call after enabling flash digital control.
- Fixed a bug causes Second Register to have no auth header by default.
- Fixed REGISTER/INVITE failover retries are not the configured number.
- Fixed device does not prompt error "Max allow length 190" in local DNS.
- Fixed TIA-Inventory-Serial Number field is wrong in MAC address instead of Serial Number while captured in LLDP Wireshark trace file.
