FIRMWARE VERSION 1.0.3.18

PRODUCT NAME

GDS3702 (*HW Supported: 1.0A*)

GDS3705 (*HW Supported: 1.1A, 1.2A, 1.3A, 1.4A, 1.4B, 3.0A, 3.1A, 3.2A*)

CPE: **1.0.5.7**

DATE

04/15/2025

FIRMWARE FILE INFORMATION

- Firmware file name: **gds3705fw.bin**
MD5: **ba2db3d331ace3a4f25142d182e42683**
- Firmware file name: **gds3702fw.bin**
MD5: **c2f833d0fc9c0099e9cf2e46d3583d80**

SUMMARY OF UPDATE

This firmware of GDS370X is mainly for bug fixes and feature enhancement.

Factory Reset is recommended if upgrading from very old firmware, or experiencing abnormal WebUI like missing parameters in the GUI. Please backup the user data and configuration before factory reset, then import back after reset.

FIRMWARE APPLIES TO BELOW HW VERSION ONLY

HW Version	FW	Comments
GDS3705 HW1.1A	YES	
GDS3705 HW1.2A	YES	
GDS3705 HW1.3A	YES	
GDS3705 HW1.4A	YES	FW1.0.0.20 as Initial Version for this HW version, not able to downgrade
GDS3705 HW1.4B	YES	FW1.0.0.20 as Initial Version for this HW version, not able to downgrade
GDS3705 HW3.0A	YES	
GDS3705 HW3.1A	YES	FW1.0.1.17 as Initial Version for this HW version, not able to downgrade
GDS3705 HW3.2A	YES	FW1.0.1.21 as Initial Version for this HW version, not able to downgrade
GDS3702 HW1.0A	YES	FW1.0.3.10 as Initial Version for the new model

BUG FIX

- Fixed call fails when enable “Accept Calls from Proxy Only” option
- Fixed wrong “Operation Successful” prompt when click icon in webUI but DO untriggered
- Fixed Card Management web prompt is unclear when input wrong Virtual Number
- Fixed remote PIN is ignored when open door using RFC2833 only
- Fixed incorrect crypto tag response
- Fixed TR069 when deleting an account via DeleteObject, the account status will display as (null)
- Fixed exported system configuration data is not Chinese when language set as Chinese
- Fixed failed to display password of Emergency PIN in https/web even enabled the display feature
- Fixed probability of call failure when auxiliary phone calls GDS via IP or extension number
- Fixed serial hunting mode fails to take effect
- Fixed configured holiday schedule failed to work at GDS3702

ENHANCEMENT

- Enhanced security via OpenVPN
- Added ability to disable alarm using RFID card at GDS3705
- Updated CPE to version 1.0.5.7

KNOWN ISSUES

- Playing Prompt Audio from Proxy/UCM sometimes distorted.
- Dual Mic function is invalid.
- When doorbell volume set to 0 still hearing the ring back tone.
- Sending repeating registration packets to Server when receiving Terminate/Notify message.

NEW HTTP API

- **GDS3705 Only**

GET:[http/https]:// <servername>/goform/config?cmd=get&type=event

SET:[http/https]://<servername>/goform/config?cmd=set& P15598=<value>

NEW P-VALUE

P-Value	Values	Default Value	Comments
P15598 (For GDS3705 Only)	0/1/2	0	Swipe Card when Alarm Output Triggered 0: Open door only 1: Turn off Alarm Output only 2: Open door AND turn off Alarm Output

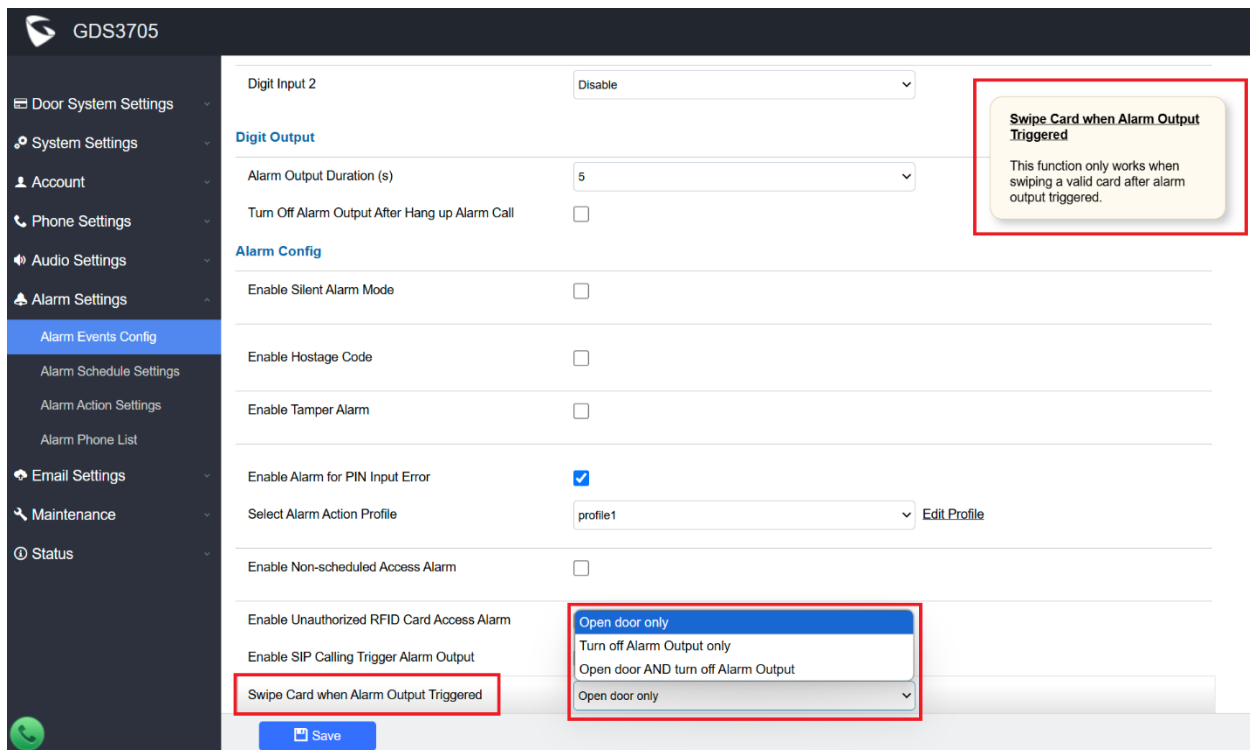

NEW FEATURES OVERVIEW

This section lists major new features or improvement and advise customers how to use them.

DISABLE ALARM VIA RFID CARD AT GDS3705

- **Web Configuration**

This option can be found under GDS3705 device web UI: Alarm Settings → Alarm Events Config:

GDS3705

Door System Settings

System Settings

Account

Phone Settings

Audio Settings

Alarm Settings

Alarm Events Config

Alarm Schedule Settings

Alarm Action Settings

Email Settings

Maintenance

Status

Digit Input 2: Disable

Digit Output

Alarm Output Duration (s): 5

Turn Off Alarm Output After Hang up Alarm Call: ☐

Alarm Config

Enable Silent Alarm Mode: ☐

Enable Hostage Code: ☐

Enable Tamper Alarm: ☐

Enable Alarm for PIN Input Error: ☒

Select Alarm Action Profile: profile1 [Edit Profile](#)

Enable Non-scheduled Access Alarm: ☐

Enable Unauthorized RFID Card Access Alarm: ☐

Enable SIP Calling Trigger Alarm Output: ☐

Swipe Card when Alarm Output Triggered

Open door only

Turn off Alarm Output only

Open door AND turn off Alarm Output

Open door only

Swipe Card when Alarm Output Triggered

This function only works when swiping a valid card after alarm output triggered.

[Save](#)

- **Functionality**

This feature enhancement is implemented based on requests from field customers.

When enabled and configured correctly, the triggered alarm can be stopped by swiping a valid RFID card at the GDS3705, based on the selected configuration from webUI.

BUG FIX

- Fixed DUT not sending Wiegand code when using GDSManager open door.
- Fixed DUT cannot detect card ID when using as Wiegand output to open door via remote PIN.
- Fixed doorbell light not light up when schedule set to 00:00 – 23:59 at first time.
- Fixed wrong email notification when open door if using Private PIN.
- Fixed no sound of opening door when using WAVE to open door.
- Fixed GDS3702 not register after reboot.
- Fixed DUT feature “Send Wiegand Code on Remote Open Door” not working.
- Fixed SMTP config not working with Office365 Exchange account.
- Fixed re-registration fails and “Re-register before Expiration” not respected.
- Fixed DUT Resync fails over SIP Notify message.
- Fixed DUT not obey Register Expire Time sent by PBX.
- Fixed DUT plays the ringback tone when SIP alarm call triggered by silent alarm or hostage code.
- Fixed after the auxiliary automatic answer, the DUT still playing the doorbell.
- Fixed the web may stall after configure the SSL in SMTP.
- Fixed DUT cannot register when using TLS.
- Fixed the virtual number only 9 digits are allowed to input for numbers greater than 2147483647.
- Fixed DUT not re-register after changing SIP transport mode.
- Fixed webUI stalls after input long characters as group name.
- Fixed security vulnerability at SSL v3.
- Fixed doorbell key in not invalid when “Press Doorbell Schedule X” is not containing current time.

ENHANCEMENT

- Added configurable “Onhook Timer after Remote Open Door”.
- Revised “Zero Config” option wording to “3CX Auto Provision”.
- Added ability to manually turn off the alarm output after the call ends or DTMF matches.
- Improve Alarm Email Subject and Text.
- Integrated new Digicert certificates in the firmware.
- Added ability to define the TLS protocol lever.
- Added the audit of admin logging information to the Event Logs.
- Added support of HTTP API request when web access set to HTTPS.
- Added support for 802.1X
- Added support for DHCP Option 2.
- Improve the syslog to be more user friendly.
- Added feature to “Enable SIP Calling Trigger Alarm Output” in “Alarm Events Config”.
- Added support for Emergency PIN to Re-enable Keep Door Open.
- Added send “event type”, “username” and “card ID” in the email event for open door.
- Added configure the “Alarm Output Duration” to last longer or unlimited.
- Optimized the web UI language and translation
- Added support for SNI extension on TLS.
- Update the CPE to 1.0.4.100
- Added sending PIN Code via Wiegand when HTTP API open door executed.
- Added “Keep Door Open” to support multiple schedules to be selected and used as per needed.
- Added initiating a normal call as alarm output.
- Added ability to on hook after API command to open door.
- Added granular Digital Output time duration.
- Added Basic Authentication to open door via HTTP API.
- Enhanced security by include "X-Content-Type-Options" header in HTTP response.
- Enhanced security by include HSTS(Strict-Transport-Security) header in HTTP response.
- Enhanced security by include "X-Xss-Protection" header in HTTP response.
- Enhanced security by fixing the vulnerabilities that might attacking the root access priviliages.
- Added option of not using “#” after PIN input so the device behaves like traditional access controller when “Disable Keypad SIP Number Dialing” enabled.
- Optimized speaker audio quality.

KNOWN ISSUES

- Playing Prompt Audio from Proxy/UCM sometimes distorted.
- Dual Mic function is invalid.
- When doorbell volume set to 0 still hearing the ring back tone.
- Sending repeating registration packets to Server when receiving Terminate/Notify message.
- Silent Alarm to SIP phone still playing siren at phone side not stopping even after pressing phone's keypad which supposedly should stop the siren audio at SIP phone side.

P15472	Door2 Emergency PIN to Disable Keep Door Open (Value: Integer; Max.Length=8)
P15586	Door2 Emergency PIN to Re-enable Keep Door Open (Value: Integer; Max.Length=8)
P15610	Enable SIP calling trigger alarm output (Value: 0/1, Default 0; 0: No, 1: Yes)

UPDATED P-VALUE

P15424	Door_System_Settings.Basic_Settings.Enable_HTTP_API_Remote_Open_Door (Value: 0/1 → 0/1/2)
P15440	Door_System_Settings.Bassic_Settinggs.Door_relay_Options (Value: 0/1/2 → 0/1/2/3)
P14341	Alarm_Settings.Alarm_Events_Config.Aarm_Output_Duration (Value: 5/10/15/20/25/30 → 1/2/3/4/5/10/15/20/25/30)

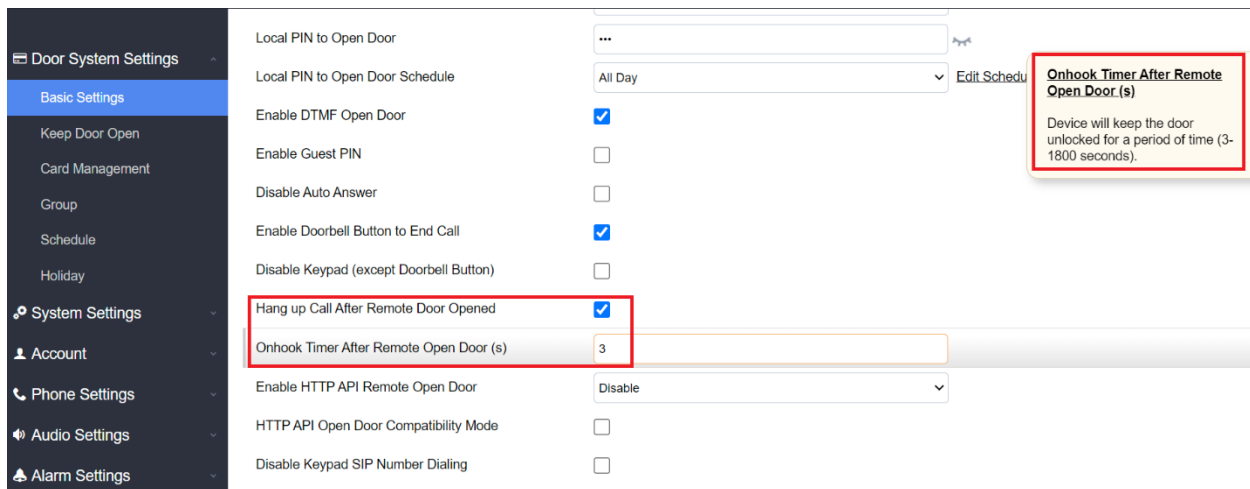

NEW FEATURES OVERVIEW

This section lists major new features or improvement and advise customers how to use them.

ONHOOK TIMER AFTER REMOTE OPEN DOOR

- **Web Configuration**

This option can be found under device web UI: Door System Settings → Basic Settings:

The screenshot displays the 'Door System Settings' menu on the left, with 'Basic Settings' selected. The main settings area includes various options for door control. Two items are highlighted with red boxes: 'Hang up Call After Remote Door Opened' (checked) and 'Onhook Timer After Remote Open Door (s)' (set to 3). A red-bordered callout box on the right explains the timer: 'Onhook Timer After Remote Open Door (s). Device will keep the door unlocked for a period of time (3-1800 seconds).' Other settings visible include Local PIN, DTMF, Guest PIN, Auto Answer, Doorbell Button, Keypad, HTTP API, and SIP Number Dialing.

- **Functionality**

This feature enhancement is implemented based on feedback from field. Customers want door opened remotely but the strike will close after configured timer (minimum value is 3 seconds)

Detailed timer can be different based on implemented scene. Like for example, the locker in Senior House might take longer holding timer than normal Office.

TURNOFF ALARM OUTPUT AFTER CALL END

- Web Configuration**

This option can be found under device web UI: Alarm Settings → Alarm Events Config:

<ul style="list-style-type: none"> Door System Settings System Settings Account Phone Settings Audio Settings Alarm Settings <ul style="list-style-type: none"> Alarm Events Config Alarm Schedule Settings Alarm Action Settings Alarm Phone List Email Settings Maintenance Status 	Digit Input 1	Disable
	Digit Input 2	Disable
	Digit Output	
	Alarm Output Duration (s)	5
	Turn Off Alarm Output After Hang up Alarm Call	<input checked="" type="checkbox"/>
	Alarm Config	
	Enable Silent Alarm Mode	<input type="checkbox"/>
	Enable Hostage Code	<input type="checkbox"/>
	Enable Tamper Alarm	<input type="checkbox"/>
	Enable Alarm for PIN Input Error	<input checked="" type="checkbox"/>
	Select Alarm Action Profile	profile1
	Enable Non-scheduled Access Alarm	<input type="checkbox"/>
	Enable Unauthorized RFID Card Access Alarm	<input type="checkbox"/>
	Enable SIP Calling Trigger Alarm Output	<input checked="" type="checkbox"/>

- Functionality**

This feature is implemented based on request from field.

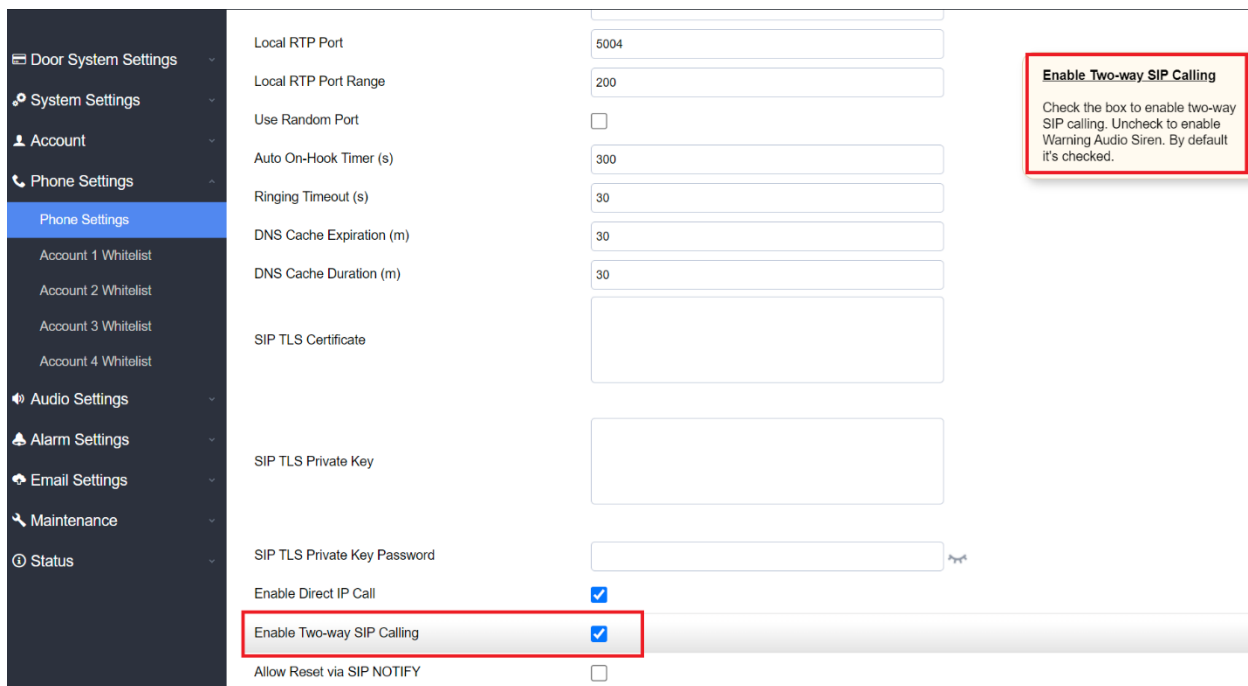

When user triggers the alarm input, the device will trigger alarm output (e.g.: 3rd party siren or flash light) and call related personal.

After the alarm event is processed, the user can stop the alarm output by hand up the Alarm Call.

For example, in Schools, Senior House or Rehab Center, when somebody press the doorbell to trigger the call, the device linked to 3rd party alarm output equipment like siren audio, flash light, etc., will take action to tell there are visitors at the door. The staff take the call and press any digit (DTMF) to stop the siren in the audio of the phone, process the call by remote open the door, and hand up the call and stop the alarm action of the 3rd party device linked to the Digit Output port of the GDS device.

NOTES:

- By default, alarm call will have siren sound when call picked up to illustrate this is an alarm call.
- Press ANY digit at callee's phone, the DTMF tone will send to GDS and the audio siren will stop, two way audio communication will then start.
- If user do NOT want the siren in the alarm call audio initially, check the "Enable Two-way SIP Calling" will allow the alarm call picked up with two-way audio started immediatley (the alarm call will behave just like normal call and user cannot tell the difference). The settings can be configured at Phone Settings like below:

Door System Settings	Local RTP Port	5004
System Settings	Local RTP Port Range	200
Account	Use Random Port	<input type="checkbox"/>
Phone Settings	Auto On-Hook Timer (s)	300
Phone Settings	Ringing Timeout (s)	30
Account 1 Whitelist	DNS Cache Expiration (m)	30
Account 2 Whitelist	DNS Cache Duration (m)	30
Account 3 Whitelist	SIP TLS Certificate	
Account 4 Whitelist	SIP TLS Private Key	
Audio Settings	SIP TLS Private Key Password	
Alarm Settings	Enable Direct IP Call	<input checked="" type="checkbox"/>
Email Settings	Enable Two-way SIP Calling	<input checked="" type="checkbox"/>
Maintenance	Allow Reset via SIP NOTIFY	<input type="checkbox"/>
Status		

Enable Two-way SIP Calling
 Check the box to enable two-way SIP calling. Uncheck to enable Warning Audio Siren. By default it's checked.

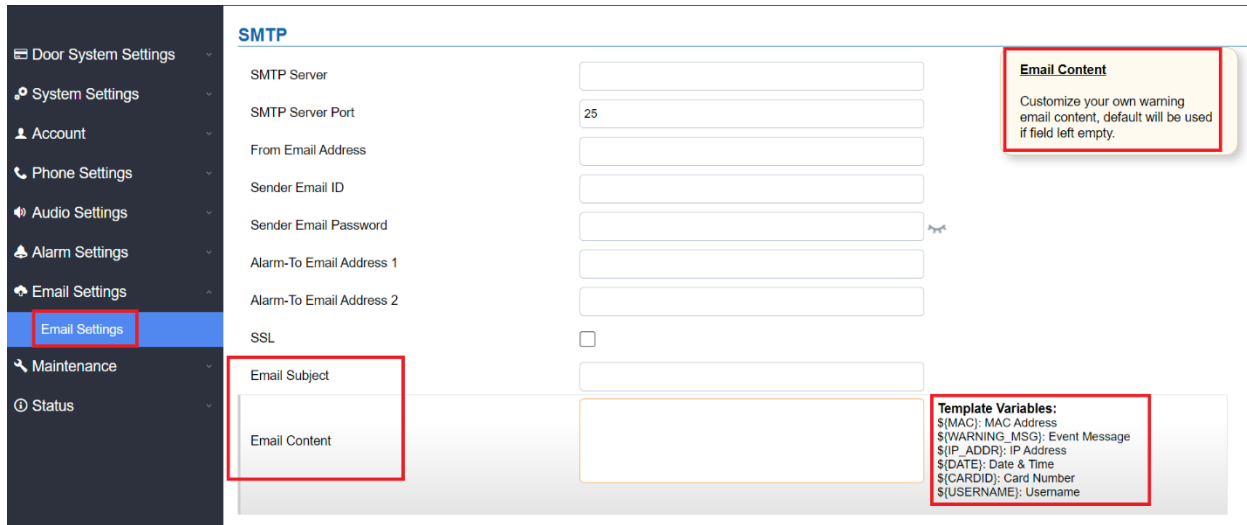

This feature is requested by customers and applicable to many application scenes like but not limited to: School, Rehab Center, Clinic, Senior House, Clubs, Workshop, Warehouse, etc.

GDS37xx linked to 3rd party device, when doorbell pressed or Digit Input linked device (like a Button) pressed, the Alarm Call will be send to pre-configured SIP phone, the Digit Output linked 3rd party device will take action (e.g.: Siren, Stroke Light, Buzz, Speaker, etc.) , and the staff take the call to process the alarm event (like input DTMF PIN to remote open door), and hang up the call to stop the action of 3rd party alarm output device.

IMPROVED ALARM EMAIL SUBJECT AND CONTENT

- **Web Configuration**

This option can be found under device web UI: Email Settings

SMTP

SMTP Server

SMTP Server Port: 25

From Email Address

Sender Email ID

Sender Email Password

Alarm-To Email Address 1

Alarm-To Email Address 2

SSL

Email Subject

Email Content

Email Content
Customize your own warning email content, default will be used if field left empty.

Template Variables:
 \${MAC}: MAC Address
 \${WARNING_MSG}: Event Message
 \${IP_ADDR}: IP Address
 \${DATE}: Date & Time
 \${CARDID}: Card Number
 \${USERNAME}: Username

- **Functionality**

This feature enhancement is implemented based on feedback from field.

Instead of default email subject and content which is very brief, customers can now input Email Subject and Email Content as they prefer, like using application scene or actions etc., or even using Template Variables, so the email received will have a lot useful information.

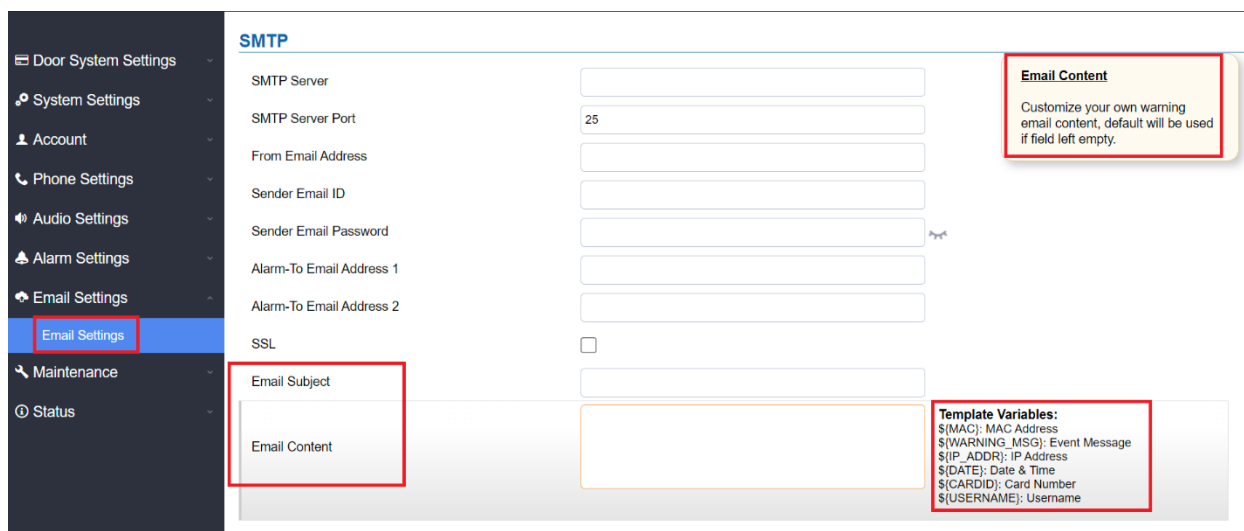

e.g.: When template used, received email will have RFID card number and username, the administrator can see it clearly in the email, or even using a script to filter out those information and generate Report.

This new feature helps to resolve customers administration requirement.

FIRMWARE VERSION 1.0.3.11

PRODUCT NAME

GDS3702 (*HW Supported: 1.0A*)

GDS3705 (*HW Supported: 1.1A, 1.2A, 1.3A, 1.4A, 1.4B, 3.0A, 3.1A, 3.2A*)

CPE: **1.0.4.4**

DATE

05/18/2022

SUMMARY OF UPDATE

This firmware of GDS370X is mainly for bug fixes, feature enhancement, and new HW support.

Factory Reset is recommended if upgrading from very old firmware, or experiencing abnormal Web UI or missing parameters in the GUI. Please backup the data and configuration before factory reset, then import back after reset.

FIRMWARE APPLIES TO BELOW HW VERSION ONLY

HW Version	FW	Comments
GDS3705 HW1.1A	YES	
GDS3705 HW1.2A	YES	
GDS3705 HW1.3A	YES	
GDS3705 HW1.4A	YES	FW1.0.0.20 as Initial Version for this HW version, not able to downgrade
GDS3705 HW1.4B	YES	FW1.0.0.20 as Initial Version for this HW version, not able to downgrade
GDS3705 HW3.0A	YES	
GDS3705 HW3.1A	YES	FW1.0.1.17 as Initial Version for this HW version, not able to downgrade
GDS3705 HW3.2A	YES	FW1.0.1.21 as Initial Version for this HW version, not able to downgrade
GDS3702 HW1.0A	YES	FW1.0.3.10 as Initial Version for the new model

BUG FIX

- Fixed the format for maximum number of Login attempts is wrong.
- Fixed the related private password open door may fail after adding RFID card via HTTP API.
- Fixed the valid end date displayed blank when using HTTP API to add a RFID card.
- Fixed no key tone after reset via Weigand.
- Fixed the “Enable password display (HTTPS)” option the prompt not accurate.
- Fixed device not work when using static IP with VLAN.
- Fixed Card Management page remains in loading stage after adding a card user.
- Fixed “Event Notification” HTTP POST method using wrong Content-Type for sample template 1 & 2.

ENHANCEMENT

- Added ability to disable CFG download with password (ITSP/Telefonica).
- Added support of configure different “Number Called When Door Bell Pressed” entries depending on the time frame or schedule.

KNOWN ISSUES

- Playing Prompt Audio from Proxy/UCM sometimes distorted.
- Dual Mic function is invalid.
- When doorbell volume set to 0 still hearing the ring back tone.
- Sending repeating registration packets to Server when receiving Terminate/Notify message.
- Silent Alarm to SIP phone still playing siren at phone side not stopping even after pressing phone’s keypad which supposedly should stop the siren audio at SIP phone side.

NEW HTTP API

```

GET:[http|https]://<servername>/goform/config?cmd=get&type=door
SET:[http|https]://<servername>/goform/config?cmd=set&P15556=<value>
SET:[http|https]://<servername>/goform/config?cmd=set&P15557=<value>
SET:[http|https]://<servername>/goform/config?cmd=set&P15558=<value>
SET:[http|https]://<servername>/goform/config?cmd=set&P15559=<value>
SET:[http|https]://<servername>/goform/config?cmd=set&P15560=<value>
SET:[http|https]://<servername>/goform/config?cmd=set&P15561=<value>
  
```

NEW P-VALUE

P15557	Door_System_Settings.Basic_Settings.Press_Doorbell_Schedule_2 (Value: 0 ~ 10)
P15556	Door_System_Settings.Basic_Settings.Number_2_Called_When_Doorbell_Pressed (Value: String, Max. Length = 255)
P15559	Door_System_Settings.Basic_Settings.Press_Doorbell_Schedule_3 (Value: 0 ~ 10)
P15558	Door_System_Settings.Basic_Settings.Number_3_Called_When_Doorbell_Pressed (Value: String, Max. Length = 255)
P15561	Door_System_Settings.Basic_Settings.Press_Doorbell_Schedule_4 (Value: 0 ~ 10)
P15560	Door_System_Settings.Basic_Settings.Number_4_Called_When_Doorbell_Pressed (Value: String, Max. Length = 255)

NEW FEATURES OVERVIEW

This section lists major new features or improvement and advise customers how to use them.

DOORBELL CALL DIFFERENT NUMBERS BASED ON DIFFERENT SCHEDULE

- **Web Configuration**

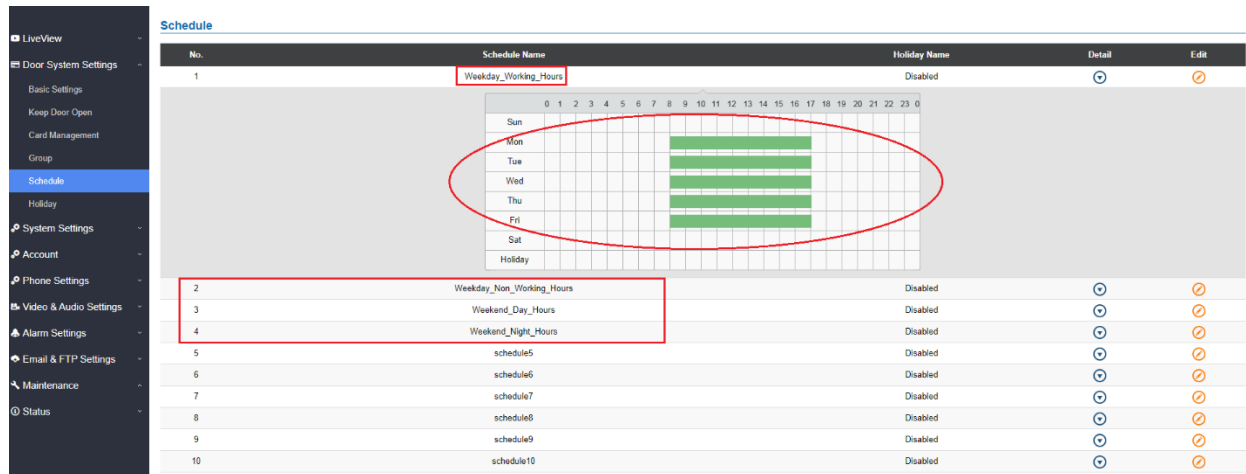

This option can be found under device web UI → Door System Settings → Basic Settings:

<div>LiveView</div> <div>Door System Settings</div> <div>Basic Settings</div> <div>Keep Door Open</div> <div>Card Management</div> <div>Group</div> <div>Schedule</div> <div>Holiday</div> <div>System Settings</div> <div>Account</div> <div>Phone Settings</div> <div>Video & Audio Settings</div> <div>Alarm Settings</div> <div>Email & FTP Settings</div> <div>Maintenance</div> <div>Status</div>	Call Mode	SIP Number	
	Doorbell Call Out Account	Auto	
	Doorbell Mode	Call Doorbell Number	
	Doorbell Call Mode	Parallel Hunting	
	Press Doorbell Schedule 1	Weekday_Working_Hours	Edit Schedule
	Number 1 Called When Doorbell Pressed	192.168.11.235:5060,	
	Press Doorbell Schedule 2	Weekday_Non_Working_Hours	Edit Schedule
	Number 2 Called When Doorbell Pressed	800	
	Press Doorbell Schedule 3	Weekend_Day_Hours	Edit Schedule
	Number 3 Called When Doorbell Pressed	805	
	Press Doorbell Schedule 4	Weekend_Night_Hours	Edit Schedule
	Number 4 Called When Doorbell Pressed	806	
	Maximum Number of Dialed Digits	0	
	No Key Input Timeout(s)	4	
	Remote PIN to Open Door 1	...	
	Remote PIN to Open Door 2	...	
	Local PIN Type	Unified PIN	
	Unified PIN Open Door Options	<input checked="" type="checkbox"/> Door 1 <input checked="" type="checkbox"/> Door 2	
Local PIN to Open Dcor	...		
Local PIN to Open Dcor Schedule	All Day	Edit Schedule	
Enable DTMF Open Door	<input checked="" type="checkbox"/>		
<div>Save</div>			

NOTES:

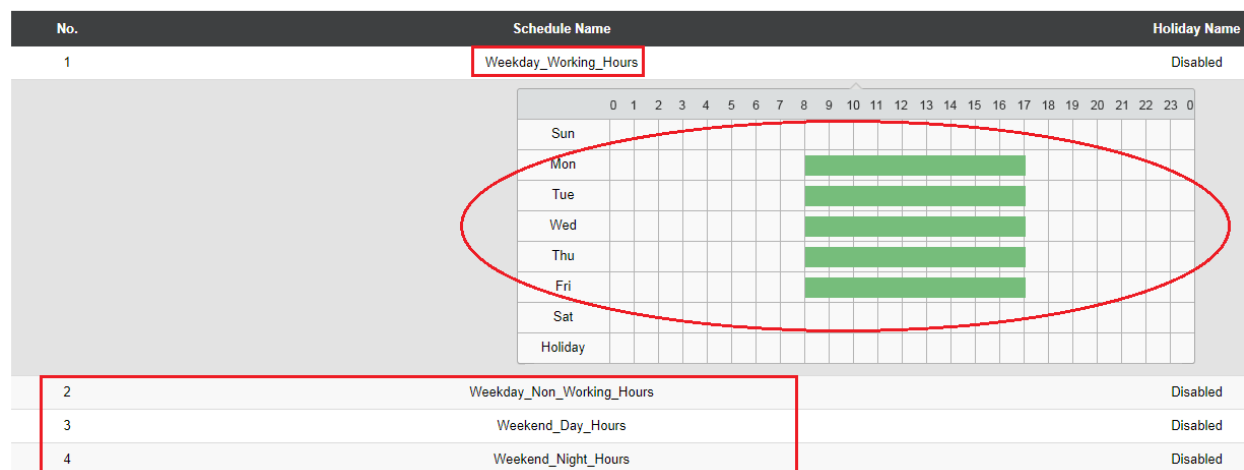

- Maximum 4 different “Schedule” can be configured.
- “Doorbell” Call Number or IP address must be configured in related “Schedule”.
- The priority order of schedule is “Schedule 1, 2, 3, 4”. The device will first check and verify current time fits in “Schedule 1”, if yes it will dial out using the configured number in Number 1; if not it will check “Schedule 2” and dial out using the configured number in Number 2 if result matched, and continue to do such checking and verification in loop till end.

For this feature to work properly, customers also need to pre-configure the “Schedule” accordingly:

No.	Schedule Name	Holiday Name	Detail	Edit
1	Weekday_Working_Hours	Disabled		
2	Weekday_Non_Working_Hours	Disabled		
3	Weekend_Day_Hours	Disabled		
4	Weekend_Night_Hours	Disabled		
5	schedule5	Disabled		
6	schedule6	Disabled		
7	schedule7	Disabled		
8	schedule8	Disabled		
9	schedule9	Disabled		
10	schedule10	Disabled		

Schedule

No.	Schedule Name	Holiday Name
1	Weekday_Working_Hours	Disabled
2	Weekday_Non_Working_Hours	Disabled
3	Weekend_Day_Hours	Disabled
4	Weekend_Night_Hours	Disabled

• Functionality

This feature enhancement is implemented based on feedback from field. Customers want doorbell call to directed to different extensions or IP address based on different time schedule.

For example, Weekly Office Hour to ring at Front Desk; Off office hour ring at person in charge, etc.

This new feature helps to resolve customers with such requirement.

GDS3705 HW3.1A	YES	FW1.0.1.21 as Initial Version for this HW version, not able to downgrade
GDS3705 HW3.2A	YES	FW1.0.1.21 as Initial Version for this HW version, not able to downgrade

BUG FIX

- Fixed system health alert enabled but device will not trigger email alert in probability after reboot.
- Fixed system health alert interval option is invalid.
- Fixed system health alert email only contains the info of sip account.
- Fixed alarm triggered but device failed to send out email.
- Fixed “Disable SIP NOTIFY Authentication” needs reboot to take effect.
- Fixed GDMS: device should not reboot during call
- Fixed the wrong prompt when device is saving data.
- Fixed default value of HTTP method is POST.
- Fixed doorbell value set to “0” cannot be saved.
- Fixed swiping legal card in unauthorized schedule will trigger both Non-scheduled Access Alarm and Non-authorized RFID Card Access Alarm (this one should not be triggered).
- Fixed login error prompt incorrect.
- Fixed DUT not sending out system health alert after revise/update SIP account information.
- Fixed non-scheduled access not logged in event log.
- Fixed when “Disable Keypad SIP Number Dialing” enabled, device cannot open door when private PIN is more than 9 digits.
- Fixed non-scheduled access alarm call can be cancelled by pressing the doorbell key.
- Fixed some parameters not able to configure successfully via GDMS.
- Fixed when set DI_1 to abnormal door control and DI_2 disabled, DI_2 still has door1/door2 displayed.
- Fixed group name more than 63 characters should be able to be chopped and saved.
- Fixed GDMS templated value not matching webUI value not updated.
- Fixed wrong default value of “Disable SIP NOTIFY Authentication”, make it consistent with all devices
- Fixed device initial response to RFID/PIN very slow after reboot or idle for a while.
- Fixed the ringing timeout P value in GDMS template is wrong.
- Fixed alarm triggered but device not sending alarm email to “Alarm-To Email Address 2”
- Fixed enable whitelist the device will lose key tone after reject the call by replying 486.
- Fixed device reboot during DTMF open door performance testing.
- Fixed device cannot apply config file via UCM Zero Config.
- Fixed using custom certificate would fail the upgrade.
- Fixed wrong prompt when configure/save a holiday name already exist.

ENHANCEMENT

- Added TR069/GDMS support

KNOWN ISSUES

- Playing Prompt Audio from Proxy/UCM sometimes distorted.
- Dual Mic function is invalid.
- When doorbell volume set to 0 still hearing the ring back tone.
- Sending repeating registration packets to Server when receiving Terminate/Notify message.
- Silent Alarm to SIP phone still playing siren at phone side not stopping even after pressing phone's keypad which supposedly should stop the siren audio at SIP phone side.

NEW HTTP API

NEW P-VALUE

- **N/A**

NEW FEATURES OVERVIEW

This section lists major new features or improvement and advise customers how to use them.

TR069/GDMS SUPPORT

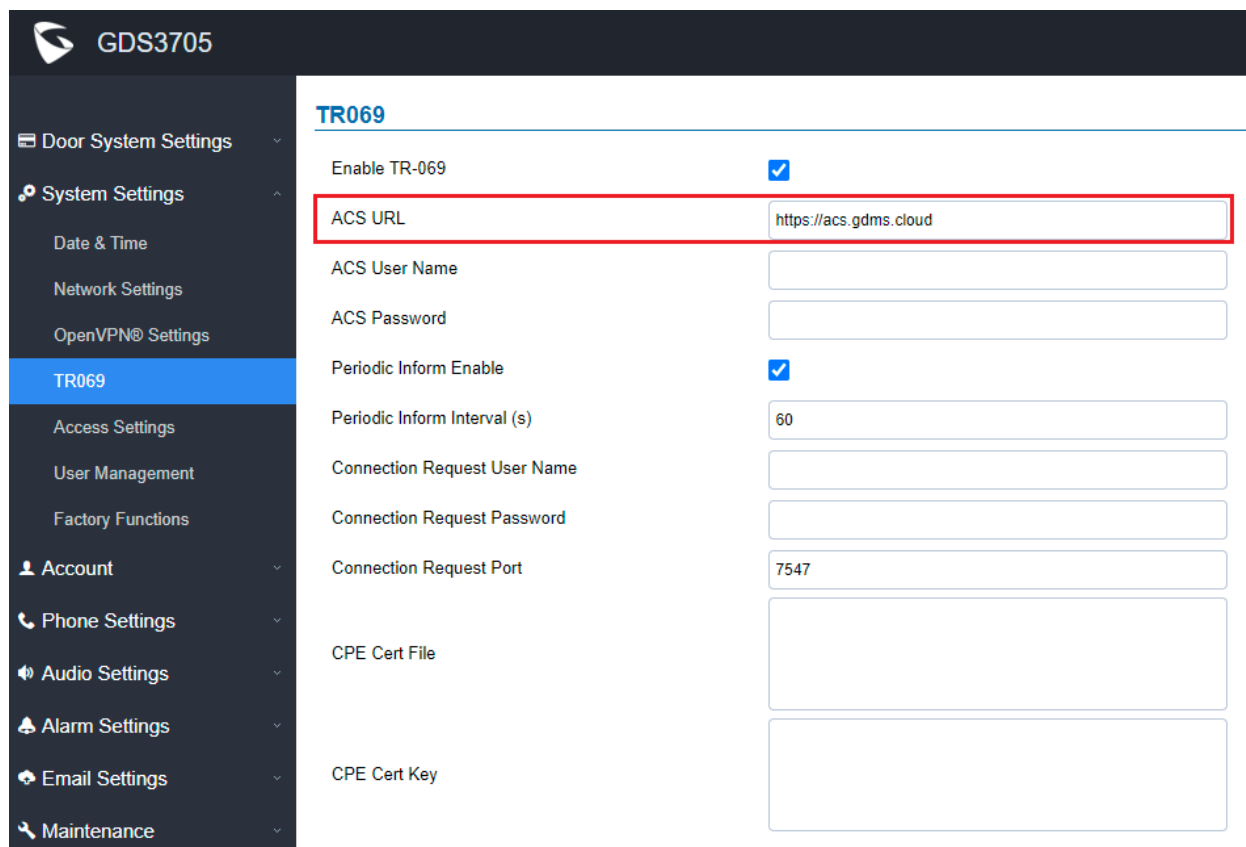

This new feature is implemented so the GDS3705 can be configured and provisioned via TR069/GDMS.

- **Functionality**

When enabled and configured, the GDS3705 will be configured and provisioned via TR069/GDMS.

- **Web Configuration**

This setup can be found under device web UI → System Settings → TR069:

The screenshot shows the GDS3705 web interface. On the left is a sidebar menu with options: Door System Settings, System Settings (expanded), Date & Time, Network Settings, OpenVPN® Settings, TR069 (selected), Access Settings, User Management, Factory Functions, Account, Phone Settings, Audio Settings, Alarm Settings, Email Settings, and Maintenance. The main content area is titled 'TR069' and contains the following settings:

- Enable TR-069: ☒
- ACS URL: (highlighted with a red box)
- ACS User Name:
- ACS Password:
- Periodic Inform Enable: ☒
- Periodic Inform Interval (s):
- Connection Request User Name:
- Connection Request Password:
- Connection Request Port:
- CPE Cert File:
- CPE Cert Key:

If service providers support TR069 provisioning, or users have account of GDMS service, the GDS3705 can be configured via using related configuration template in the TR069 server or GDMS server side, then provisioning it over the Internet (Cloud Service).

Details please check out GDMS:

FIRMWARE VERSION 1.0.1.21

PRODUCT NAME

GDS3705 (HW Supported: 1.1A, 1.2A, 1.3A, 1.4A, 1.4B, 3.0A, 3.1A)

DATE

12/10/2021

SUMMARY OF UPDATE

This firmware of GDS3705 is mainly for feature enhancement, bug fixes and new HW support.

Factory Reset is recommended if upgrading from very old firmware, or experiencing abnormal WebUI or missing parameters in the GUI. Please backup the data and configuration before factory reset, then import back after reset.

FIRMWARE APPLIES TO BELOW HW VERSION ONLY

HW Version	FW	Comments
GDS3705 HW1.1A	YES	
GDS3705 HW1.2A	YES	
GDS3705 HW1.3A	YES	
GDS3705 HW1.4A	YES	FW1.0.0.20 as Initial Version for this HW version
GDS3705 HW1.4B	YES	FW1.0.0.20 as Initial Version for this HW version
GDS3705 HW3.0A	YES	FW1.0.1.21 as Initial Version for this HW version
GDS3705 HW3.1A	YES	FW1.0.1.21 as Initial Version for this HW version

BUG FIX

- 3CX IOT: fixed not sending REGISTER to configured port in SIP Server field when using STUN
- Fixed changing access mode to HTTPS with port 80 will be saved which should not
- Fixed no alarm email when "Non-authorized RFID Card Access Alarm" enabled
- Fixed DTMF door opening performance a while will sometimes cause the device failing to send registration to server and reboot required to recover.

ENHANCEMENT

- Added HW3.0A, HW3.1A support. (**The initial firmware is 1.0.1.21 and NOT able to downgradable**)
- Cisco WebEx IOT: Added Web UI Option “SIP URI Scheme When Using TLS”
- Cisco WebEx IOT: Added Web UI Option “Support SIP Instance ID”
- Added support for configurable keypad blue light On/Off.
- Added unauthorized card swiped on wired external 3rd party Wiegand reader will also have alert message in event Log
- Increased Whitelist Number to maximum 200 in each Account
- Added prompt “Alarm Schedule Name” and “Alarm Action Profile Name” cannot be blank.
- 3CX IOT: Support “Add MAC in User-Agent”
- 3CX IOT: Added “Codec Negotiation Priority” configuration
- Added option to choose HTTP method to either GET or POST request
- Added error prompt if illegal port value is set to web access

KNOWN ISSUES

- Playing Prompt Audio from Proxy/UCM sometimes distorted.
- Dual Mic function is invalid.
- When doorbell volume set to 0 still hearing the ring back tone.
- Sending repeating registration packets to Server when receiving Terminate/Notify message.
- Silent Alarm to SIP phone still playing siren at phone side not stopping even after pressing phone's keypad which supposedly should stop the siren audio at SIP phone side.

NEW FEATURES OVERVIEW

This section lists major new features or improvement and advise customers how to use them.

CISCO WEBEX COMPATABLE

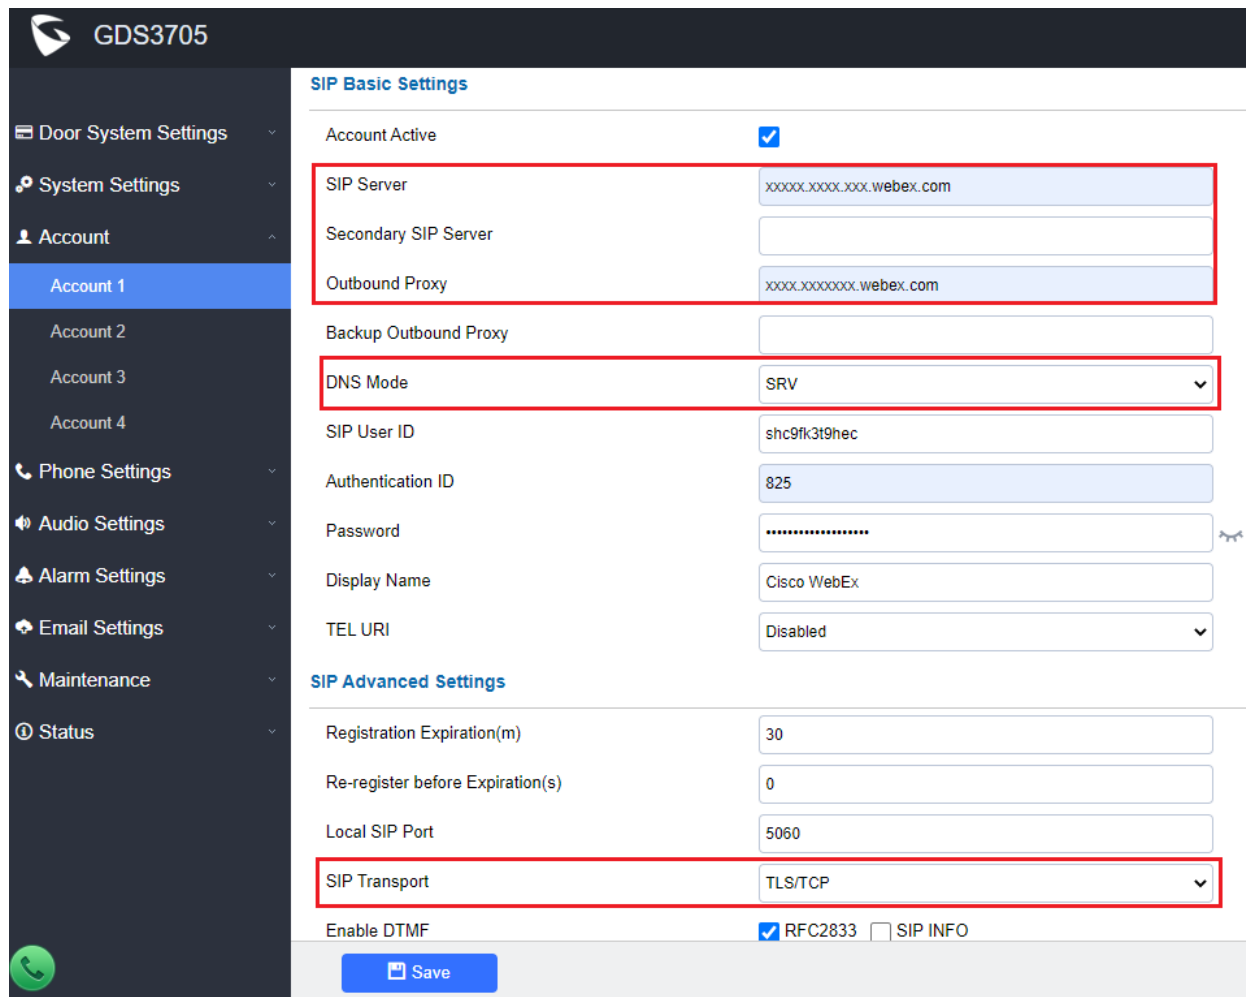

This new feature is implemented so the GDS3705 can be running in Cisco WebEx Service.

- **Functionality**

When enabled and configured this feature, the GDS3705 will register and work in Cisco WebEx Service.

- **Web Configuration**

This setup can be found under device web UI → Account → Account X:

If user has Cisco WebEx service, the GDS3705 can be configured using above screenshots as reference, so the GDS3705 can be registered and running in Cisco WebEx Service.

3CX IOT COMPATABLE

- **Web Configuration**

This option can be found under device web UI → Account → Account X:

The screenshot shows the web configuration interface for a GDS3705 device. The left sidebar contains a menu with options: Door System Settings, System Settings, Account (selected), Account 1 (selected), Account 2, Account 3, Account 4, Phone Settings, Audio Settings, Alarm Settings, Email Settings, Maintenance, and Status. The main content area displays various settings for the selected account.

General Settings:

- Enable SIP: Disabled
- Special Feature: Standard
- Outbound Proxy Mode: In Route
- Validate Incoming Messages: ☐
- Enable RTCP: Disabled
- Accept Incoming SIP from Proxy Only: ☐
- SIP URI Scheme When Using TLS: sip
- Support SIP Instance ID: ☒

Custom SIP Headers:

- Use P-Access-Network-Info Header: ☒
- Add MAC in User-Agent: ☐ (highlighted with a red box)

Vocoder Settings:

- Preferred Vocoder 1: (highlighted with a red box)
- Preferred Vocoder 2: (highlighted with a red box)
- Preferred Vocoder 3: (highlighted with a red box)
- Preferred Vocoder 4: (highlighted with a red box)
- Codec Negotiation Priority: Callee
- Voice Frames Per TX: 2

Red Circles and Highlighted Options:

- A red circle highlights the "Yes except REGISTER" option in the "Add MAC in User-Agent" dropdown menu.
- A red circle highlights the "G.722" and "G.729A/B" options in the "Preferred Vocoder" dropdown menus.

A "Save" button is located at the bottom right of the configuration area.

- **Functionality**

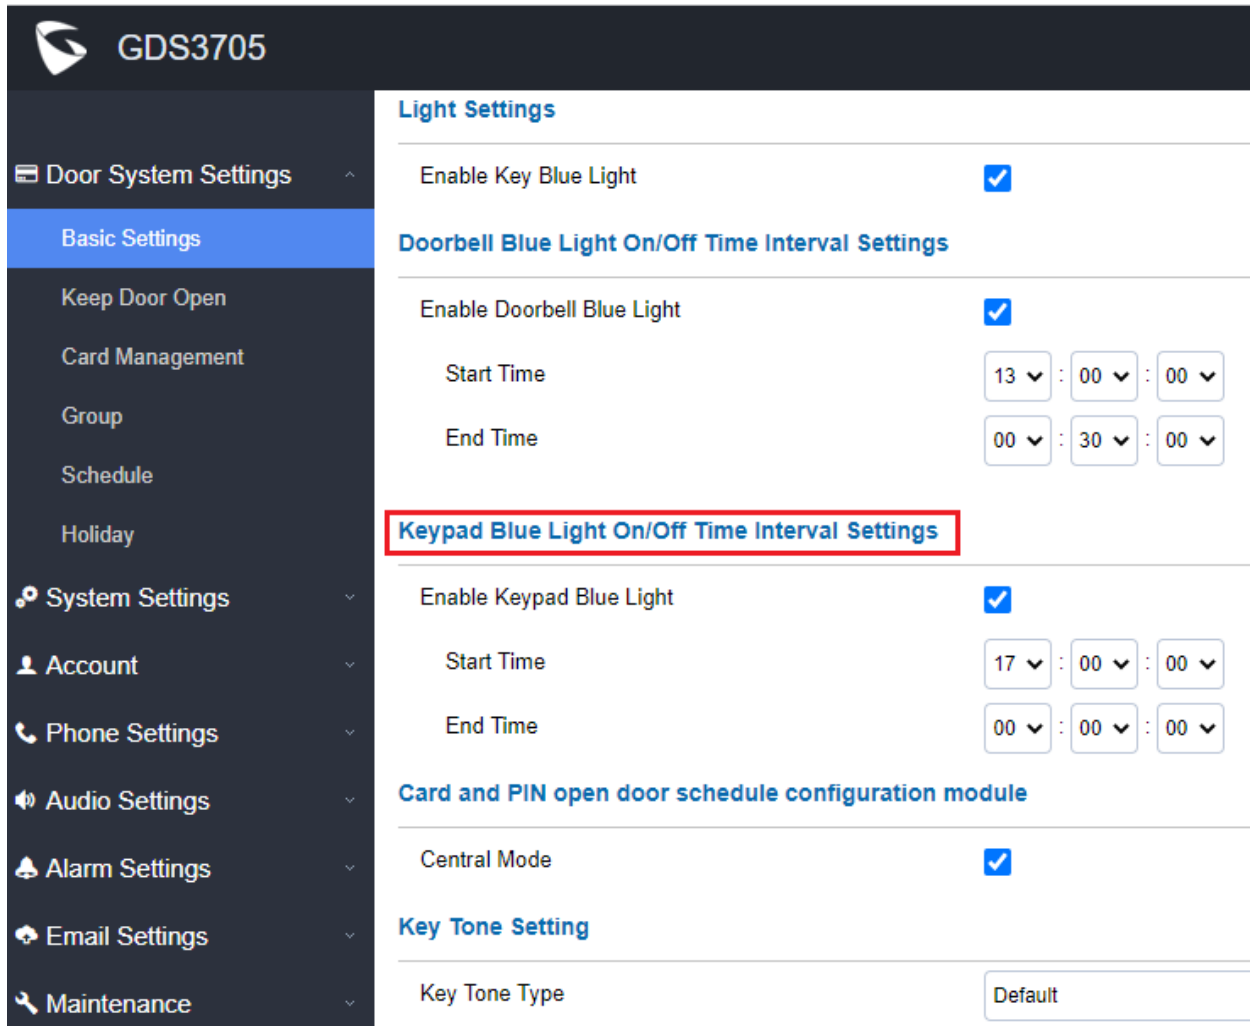

With this feature implemented, customers can conveniently select and configure related parameters so the GDS3705 can be registered and running in 3CX Solution, or be provisioned by 3CX Server.

The above screenshot of configuration is for 3CX configuration reference only.

CONFIGURABLE KEYPAD BLUE LIGHT ON/OFF

- **Web Configuration**

This option can be found under device web UI → Door System Settings → Basic Settings:

GDS3705

Key Tone Type Default

- **Functionality**

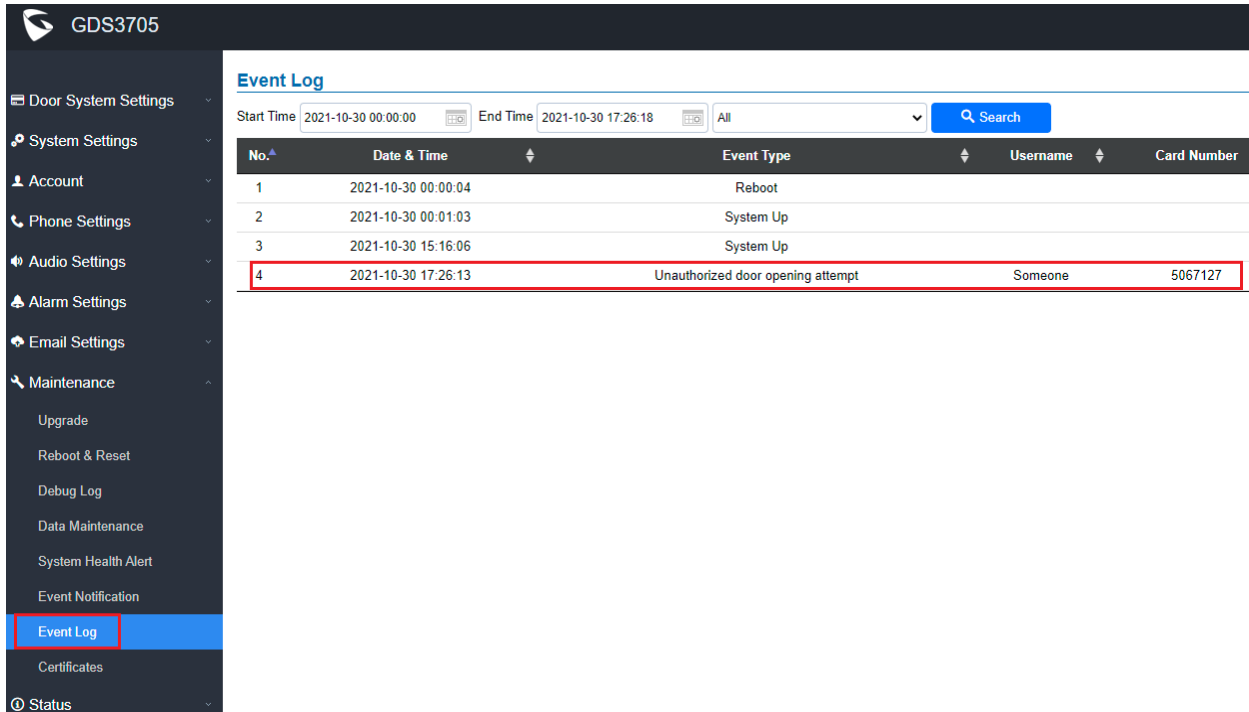

This feature enhancement is response to field request from customers.

By configure the keypad blue light ON/OFF based on specific time in a day, the GDS3705 can light up the keypad using blue LED light in the dark or night environment, so the visitors can clearly see the keypad and press the keypad to call or input PIN to open door without making mistakes.

UNAUTHORIZED CARD SWIPE (WIEGAND READER) ALERTED IN EVENT LOG

- **Web Configuration**

This option can be found under device web UI → Maintenance → Event Log:

GDS3705

Event Log

Start Time: 2021-10-30 00:00:00 End Time: 2021-10-30 17:26:18 All Search

Event Log

Certificates

① Status

- **Functionality**

This feature is implemented based on feedback from customers.

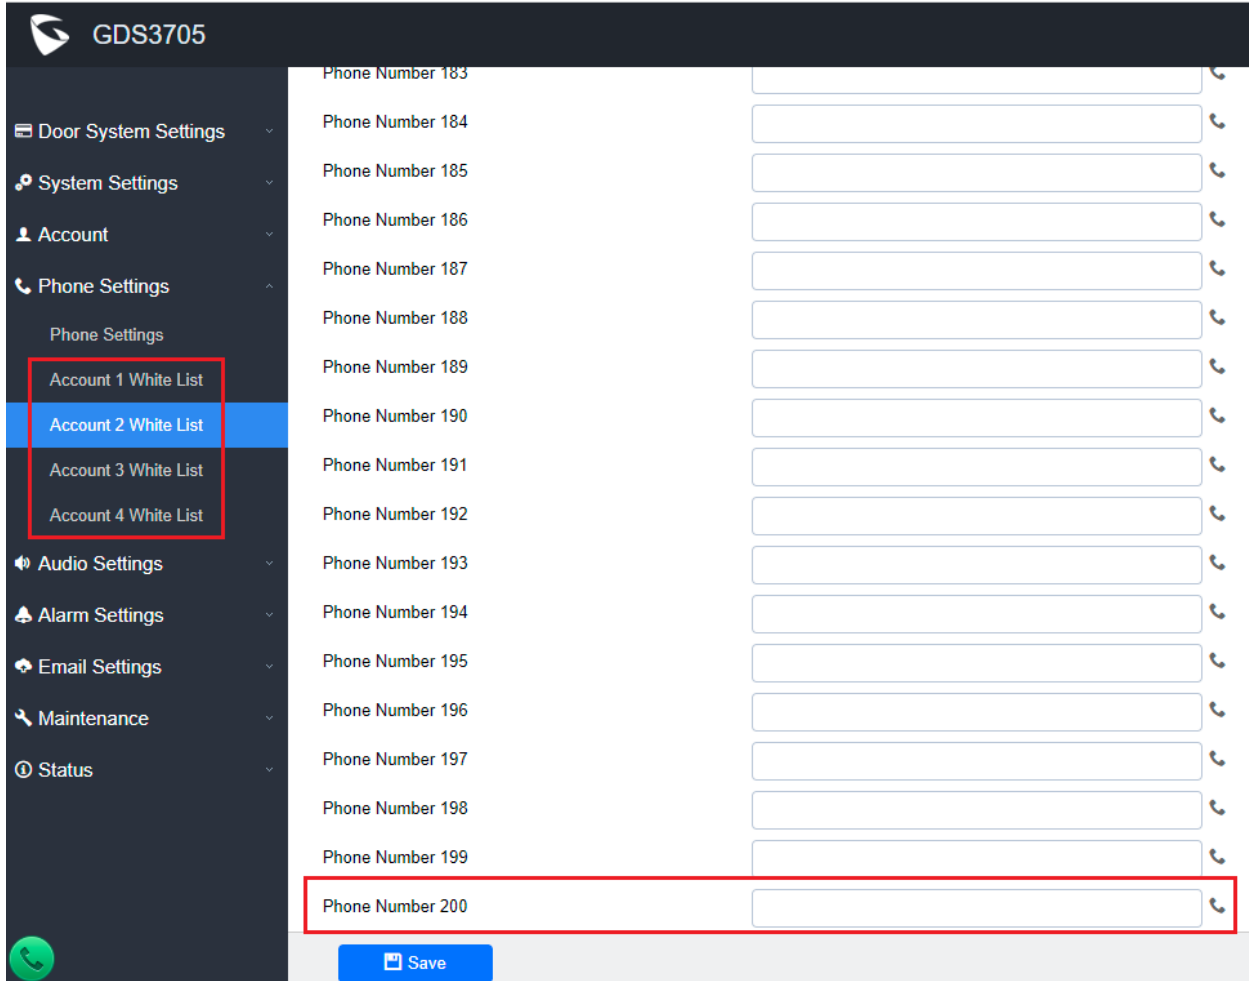

This feature previously only works when RFID card swiped at the GDS3705. If 3rd party card reader installed and wired into the Wiegand port of GDS3705, the illegal card swiped would not be able to be logged in the Event Log.

With this feature implemented, the illegal RFID card swiped via the 3rd party card reader will also be logged and alerted in the Event Log of the GDS3705, as shown in above screenshot.

INCREASED WHITELIST IN EACH ACCOUNT

- Web Configuration**

This option can be found under device web UI → Phone Settings → Account X White List:

Phone Number 199	<input type="text"/>	✕
Phone Number 200	<input type="text"/>	✕

Save

- Functionality**

This feature enhancement is based on customers from field.

Some customers integrated GDS3705 with IPPBX and interconnected with POT Lines, so the visitors can call the user's cell phone number asking remote open door if user is not at the location.

Previously the White List has limitation so the list will full very quickly if the location is an apartment building. Now the list is boosted to maximum 200 in each Account. This will solve customer's problem and make the application solution feasible.

For detailed information, please refer to User Manual and Resource Center:

- **GDS3705 User Manual:**
http://www.grandstream.com/sites/default/files/Resources/GDS3705_UserManual.pdf
- **HOW-TO Guide**
<http://www.grandstream.com/support/resources/?title=GDS3705>

FIRMWARE VERSION 1.0.1.16

PRODUCT NAME

GDS3705 (*HW Supported: 1.1A, 1.2A, 1.3A, 1.4A, 1.4B*)

DATE

03/12/2021

SUMMARY OF UPDATE

This firmware update of GDS3705 is mainly for feature enhancement and bug fixes.

Factory Reset is recommended if upgrading from very old firmware, or experiencing abnormal webUI or missing parameters in the GUI. Please backup the data and configuration before factory reset, then import back after reset.

FIRMWARE APPLIES TO BELOW HW VERSION ONLY

HW Version	FW	Comments
GDS3705 HW1.1A	YES	
GDS3705 HW1.2A	YES	
GDS3705 HW1.3A	YES	
GDS3705 HW1.4A	YES	FW1.0.0.20 as Initial Version for this HW version
GDS3705 HW1.4B	YES	FW1.0.0.20 as Initial Version for this HW version

BUG FIX

- Fixed half time zone the daylight saving time is invalid.
- Fixed unauthorized card swiped at Wiegand reader the event log not display related event.
- Fixed keypad locked if doorbell pressed or wrong PIN entered quickly too many times.
- Fixed NAPRT not used in DNS/SRV mode.
- Fixed call failure when disable key blue light with more than 6 second “no key input timeout” setting.
- Fixed doorbell audio played during the call.
- Fixed in Data Maintenance Mode, import the exported file will fail with prompt “illegal certificate”.
- Fixed error display issue when the certificate imported is valid for more than 2038.
- Fixed device reboot when import unmodified certificates in XML.
- Fixed device not check all PAI to match with whitelist number (ITSP Telefonica).
- Fixed cannot dial using Virtual Number.

ENHANCEMENT

- Added Secure Open Door with GDS37xx/GSC3570 Pairing and door lock/strike wired to GSC3570 Alarm_Out port and controlled by GSC3570 (located inside) instead of GDS37xx (located outside).
- Added pairing with GSC3570 open door without SIP call.
- Added Card Number limitation with maximum number to be **2147483647**.
- Added Web Relay ON/OFF URL configuration field for some 3rd party Web Relay Door Controlling.
- Added configurable Scheduled Auto Reboot (to keep a healthy system running).
- Added SIP Account Active feature.
- Added ability to disable P-Access-Network-Info Header for ITSP (e.g.: Telefonica).
- Added support to trigger Alarm Action when illegal card swiped.
- Added support to allow IP addresses in whitelist to call the GDS37xx and bypass the setting of "Accept Incoming SIP from Proxy Only"
- Added protection schema to prevent device reboot during a call.
- Added "GMT-3 (Argentina, Uruguay, Brasilia, San Paulo)" in time zone settings.
- Added "GMT-3:30 (Newfoundland)" in time zone settings.
- Enhanced webUI password display with security and convenience.
- Improved webUI error login prompt message.
- Enhanced Card Management / Private PIN display feature for better administration.
- Improved HTTP API Open Door by processing default value if missed in the API.
- Modified tips at Card Management Page
- Enhanced webUI password display with security and convenience.

KNOWN ISSUES

- Playing Prompt Audio from Proxy/UCM sometimes distorted.
- Dual Mic function is invalid.
- When doorbell volume set to 0 still hearing the ring back tone.
- Sending repeating registration packets to Server when receiving Terminate/Notify message.
- Silent Alarm to SIP phone still playing siren at phone side not stopping even after pressing phone's keypad which supposedly should stop the siren audio at SIP phone side.

NEW HTTP API

- **P15540/ P15541/ P15542**
GET:[http|https]://<servername>/goform/config?cmd=get&type=reset_reboot
SET:[http|https]://<servername>/goform/config?cmd=set&P15540=<value>

- P15516: Alarm_Settings.Alarm_events_config.Alarm_config.Alarm_profile
(value: 1-10: profile1-10)

NEW FEATURES OVERVIEW

This section lists major new features or improvement and advise customers how to use them.

PAIR WITH GSC3570 OPEN DOOR W/O SIP CALL

This new open door feature is a major enhancement to GDS37xx, but need to include GSC3570 paired to make it a whole solution. The GDS37xx/GSC3570 will be pairing together in LAN, and GDS37xx still controls the strike.

- **Functionality**

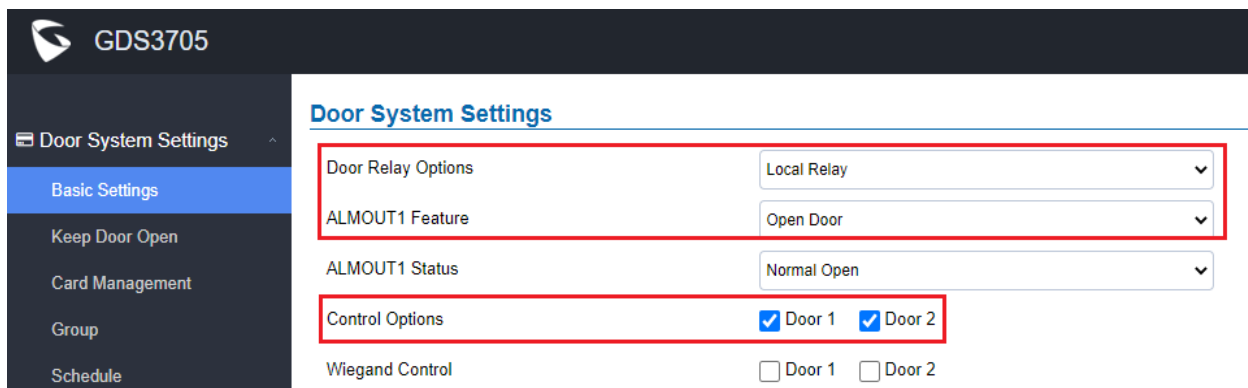

When enabled and configured this feature, the user will touch the GSC3570 and open the door directly via GDS37xx, without making SIP calls. This feature needs related matching GSC3570 firmware to work. The firmware required:

- **GSC3570: 1.0.5.9 or above**

- **Web Configuration**

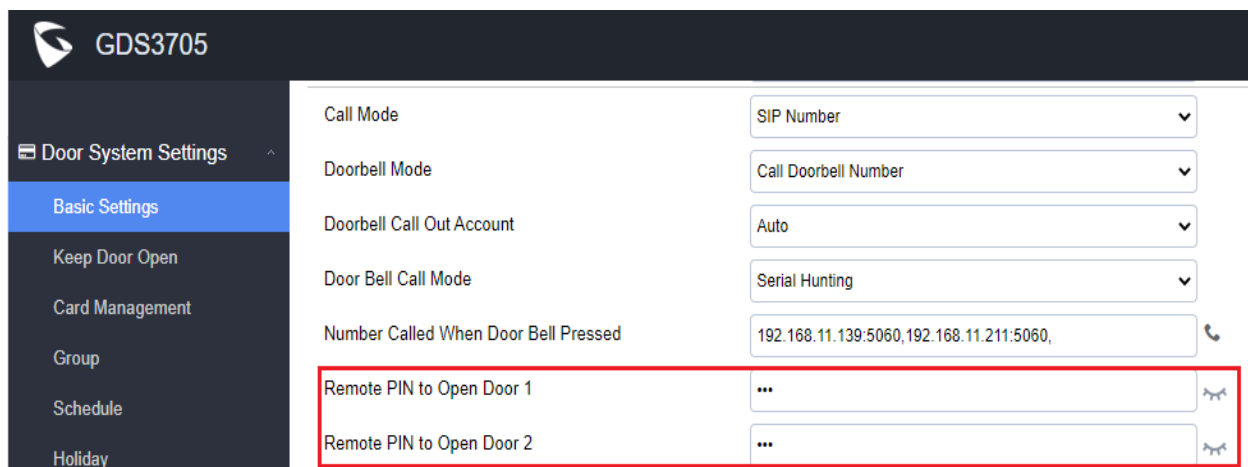

GDS3705: (FW: 1.0.1.16 or above)

This setup can be found under device web UI → Door System Settings → Basic Settings:

The screenshot shows the 'Door System Settings' page for a GDS3705 device. The left sidebar contains a menu with 'Door System Settings' expanded, showing 'Basic Settings', 'Keep Door Open', 'Card Management', 'Group', and 'Schedule'. The main content area is titled 'Door System Settings' and contains several configuration options:

- Door Relay Options:** Local Relay (dropdown)
- ALMOUT1 Feature:** Open Door (dropdown)
- ALMOUT1 Status:** Normal Open (dropdown)
- Control Options:** ☒ Door 1 ☒ Door 2
- Wiegand Control:** ☐ Door 1 ☐ Door 2

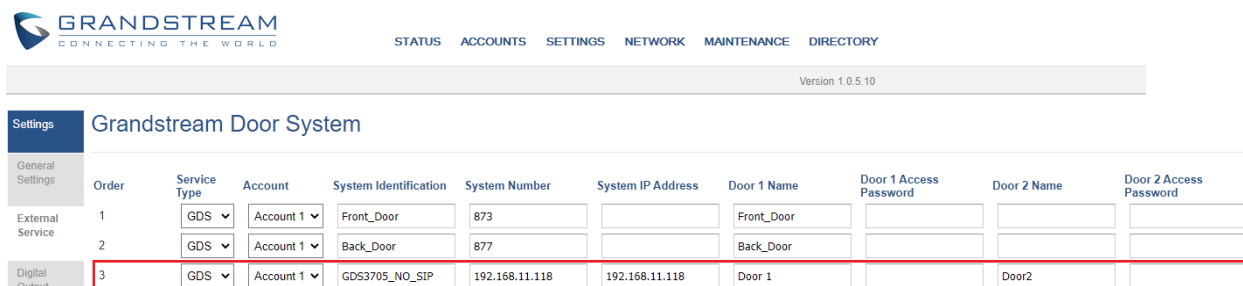

The screenshot continues the 'Door System Settings' page for a GDS3705 device. The left sidebar is the same as the previous screenshot. The main content area shows additional configuration options:

- Call Mode:** SIP Number (dropdown)
- Doorbell Mode:** Call Doorbell Number (dropdown)
- Doorbell Call Out Account:** Auto (dropdown)
- Door Bell Call Mode:** Serial Hunting (dropdown)
- Number Called When Door Bell Pressed:** 192.168.11.139:5060,192.168.11.211:5060, (text input with a call icon)
- Remote PIN to Open Door 1:** ... (text input with a lock icon)
- Remote PIN to Open Door 2:** ... (text input with a lock icon)

The GDS37xx is configured to control the relay/strike with “Door Relay Option” selected as “Local Relay”, where 1 door or 2 door used, depending on user’s configuration and installation.

GSC3570: (FW: 1.0.5.9 or above)

The GSC3570 side also need to be configured according, like below:

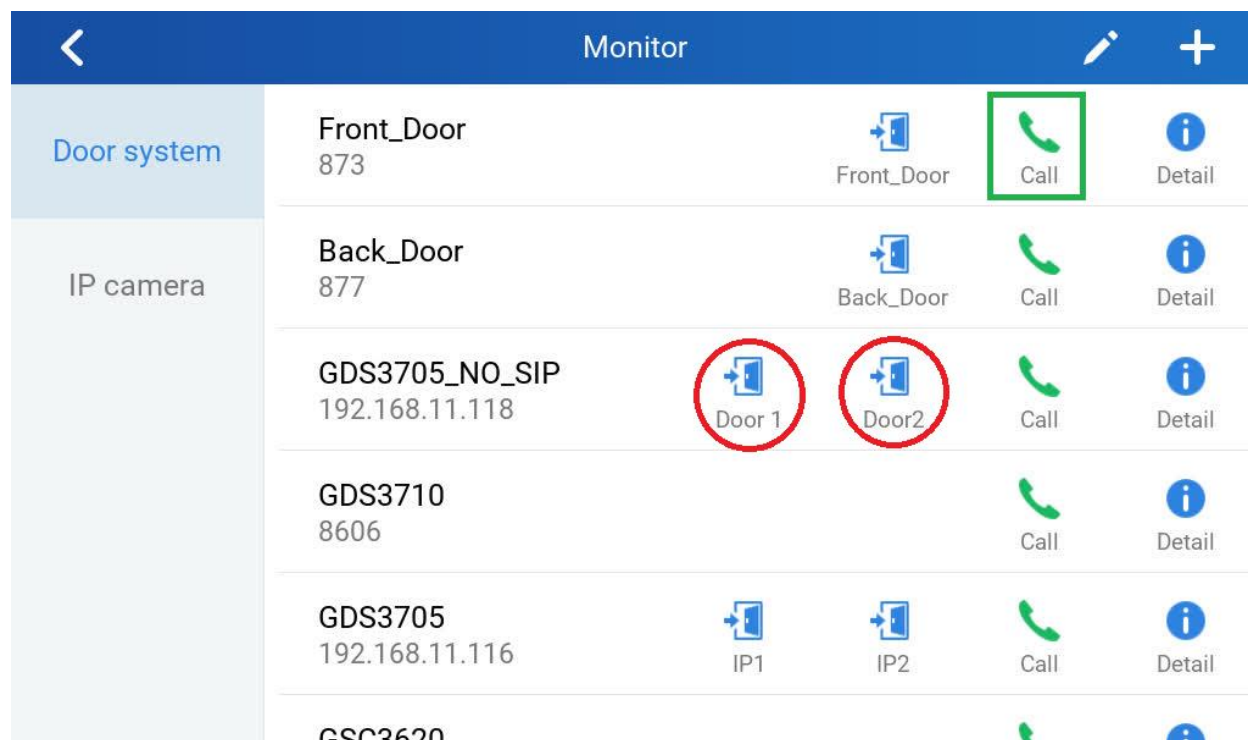

The screenshot shows the Grandstream web interface with the 'Settings' menu open. The 'Grandstream Door System' configuration page is displayed. The table below represents the data visible in the 'Digital Output' section of the interface.

Order	Service Type	Account	System Identification	System Number	System IP Address	Door 1 Name	Door 1 Access Password	Door 2 Name	Door 2 Access Password
1	GDS	Account 1	Front_Door	873		Front_Door			
2	GDS	Account 1	Back_Door	877		Back_Door			
3	GDS	Account 1	GDS3705_NO_SIP	192.168.11.118	192.168.11.118	Door 1		Door2	

In the “SETTINGS → External Service”, input the IP address of GDS37xx where the GSC3570 paired with, and input the correct PIN for open related remote doors. The PIN should match with GDS37xx related remote PIN to open door.

Once configured successfully, in the touch screen UI of GSC3570, press “Monitor”, select “Door system”, will see UI like below:

The screenshot shows the 'Monitor' screen of the GSC3570 device. The 'Door system' tab is selected. The interface displays a list of configured doors and their associated actions. The 'Call' button for 'Front_Door' is highlighted with a green box, and the 'Door 1' and 'Door2' buttons for 'GDS3705_NO_SIP' are circled in red.

Door Name	System Number	Door 1	Door 2	Call	Detail
Front_Door	873			Call	Detail
Back_Door	877			Call	Detail
GDS3705_NO_SIP	192.168.11.118	Door 1	Door2	Call	Detail
GDS3710	8606			Call	Detail
GDS3705	192.168.11.116	IP1	IP2	Call	Detail
GSC3620				Call	Detail

Select the related door where the GSC3570 controlled, in this example, the “GDS3705_NO_SIP” located at right corner of top line is the one configured. Press the icon of open door (red circled one) will pop up another UI like below when door opened successfully:

Press related “Door 1” or “Door 2” icon (two doors configured in this example), the GDS37xx will operate the strike and open the correspondent door accordingly.

If press the “Phone” icon (green square illustrated above), then the GSC3570 will make SIP phone call to the configured GDS37xx and open door remotely via SIP phone call like as before.

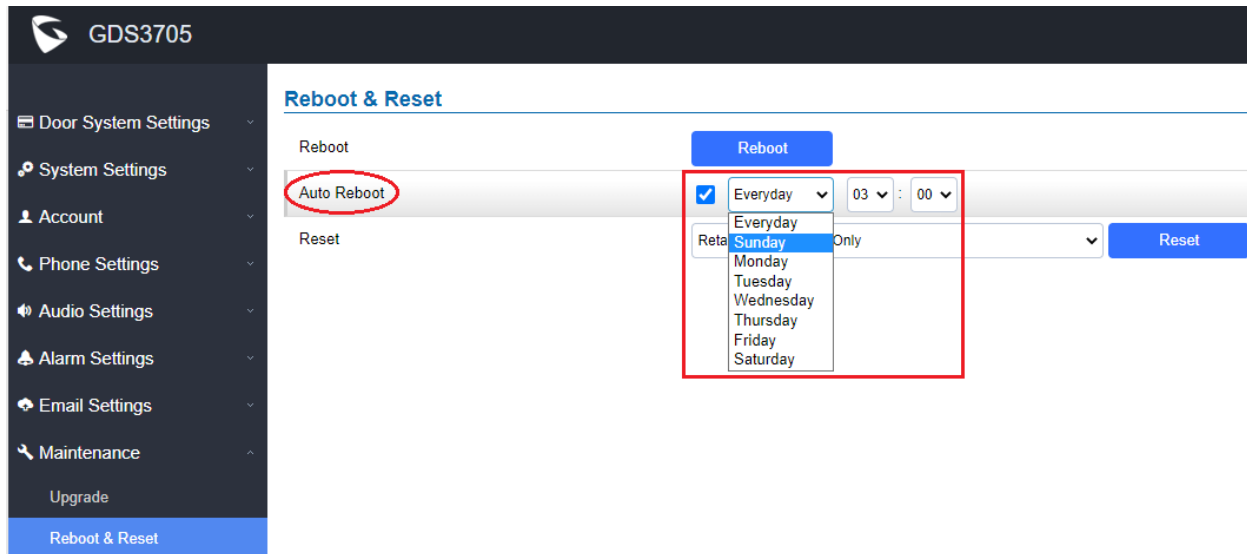

The application will help customers with installation scene where GSC3570 is located near Receptionist or related person, the user just use GSC3570 to operate GDS37xx to open door, without make a SIP phone call.

This application scene is good for hospital/clinic or senior house etc., environment where open door button or switch is NOT installed or wired, customer can just add a GSC3570 to open door from inside by related person (nurse or receptionist), to give convenience to their customers to come in or get out of the office or building.

SCHEDULED AUTO REBOOT

- **Web Configuration**

This option can be found under device web UI → Maintenance → Reboot & Reset:

- **Functionality**

With this feature implemented, customers can conveniently select a schedule to let the device reboot itself, per week or per day, to make a smooth and clean system, for the access control operation as well as to make sure the device is registered to SIP Proxy.

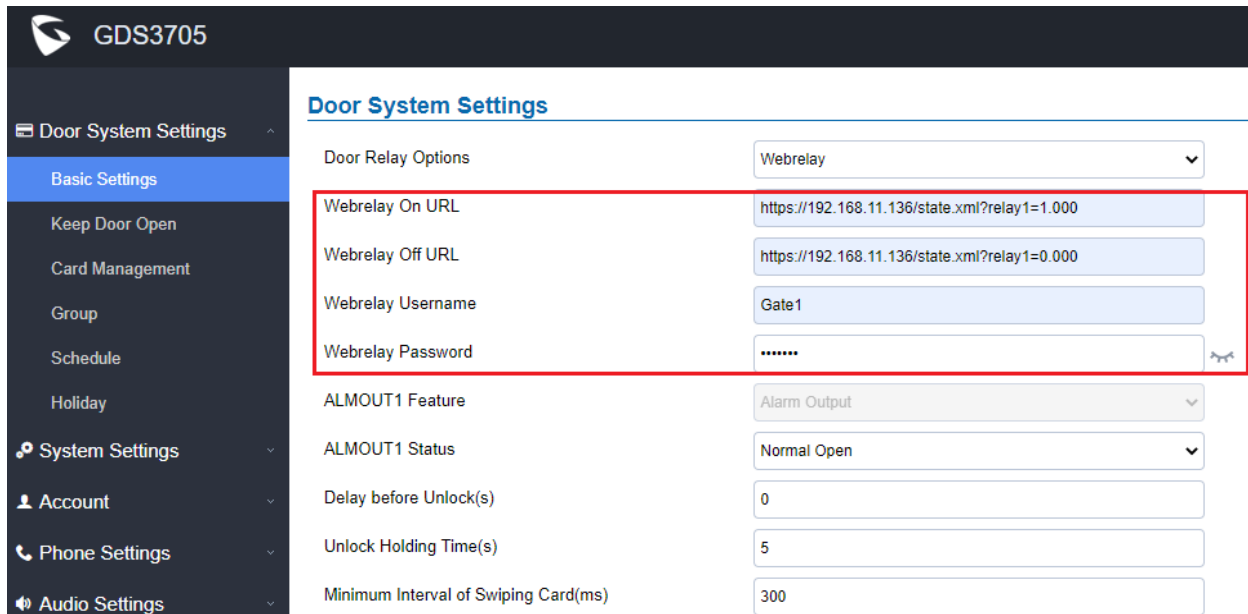

Before implement this feature, customers need to write their own scripts to reboot the device, or using SIP NOTIFY from SIP Server to reboot the device, or manually reboot the device when found the device lost registration to SIP Proxy.

Reliability is ensured by implement this new enhancement.

ENHANCED OPEN DOOR VIA 3RD PARTY WEBRELAY WITH ON/OFF URL

- Web Configuration**

This option can be found under device web UI → Door System Settings → Basic Settings:

GDS3705

Door System Settings

- Basic Settings
- Keep Door Open
- Card Management
- Group
- Schedule
- Holiday
- System Settings
- Account
- Phone Settings
- Audio Settings

Door System Settings

Door Relay Options: Webrelay

Webrelay On URL: <https://192.168.11.136/state.xml?relay1=1.000>

Webrelay Off URL: <https://192.168.11.136/state.xml?relay1=0.000>

Webrelay Username: Gate1

Webrelay Password:

ALMOUT1 Feature: Alarm Output

ALMOUT1 Status: Normal Open

Delay before Unlock(s): 0

Unlock Holding Time(s): 5

Minimum Interval of Swiping Card(ms): 300

- Functionality**

This feature enhancement is response to field request to integration with 3rd party Webrelay controller, to install the relay controller inside the build to enhance the security or apply in some industry application solution.

Now there are TWO Webrelay URL fields available, with On or Off URL command allowed or other usage URL command allowed. Also allow Username and Password configured if the 3rd party Webrelay requiring this security feature.

If some 3rd party Webrelay only support one URL command, then just leave another Off URL blank, or put whatever there as long as it is NOT a URL command.

- 3rd Party Webrelay**

When Webrelay is selected, customers need to continue configure the Webrelay IP address or domain name, together with credentials like Username and Password, as well as the URL commands used by the 3rd party Webrelay.

When legal open door event happened, the configured web relay will get the communication from GDS37xx, and will operate the strike to open door for the authenticated open door request. Or use that command to operate other industry application.

In web relay mode, the strike is wired to the web relay controller device.

The correct URL command, please refer to related 3rd party Webrelay User Manual or related documentation for details.

For more details about 3rd party Webrelay, please refer to below URL to get more information:

<https://www.controlbyweb.com/webrelay/>

(Single/Dual/Quad, etc.)

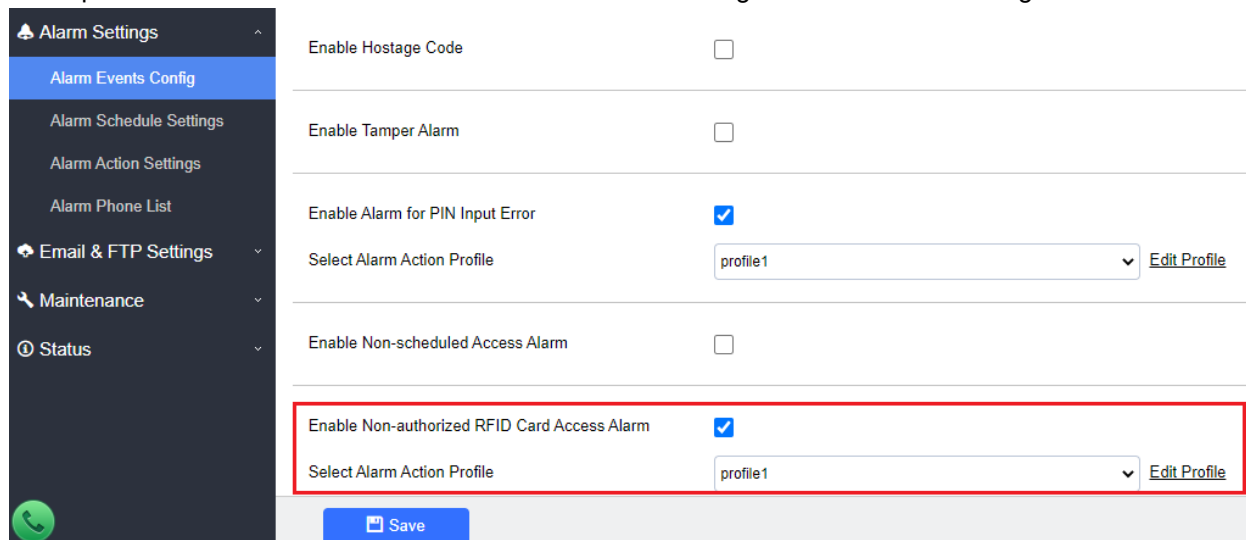

<https://www.barix.com/barionet/>

(Universal programable I/O device)

ALARM ACTION WHEN ILLEGAL CARD SWIPED

- **Web Configuration**

This option can be found under device web UI → Alarm Settings → Alarm Event Config:

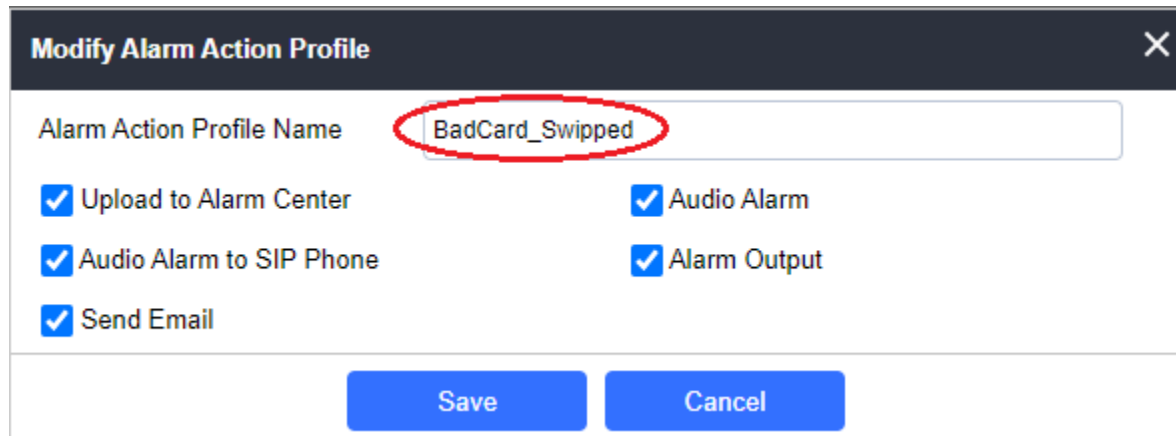

The screenshot shows the 'Alarm Settings' menu on the left with 'Alarm Events Config' selected. The main area displays several configuration options:

- Enable Hostage Code: ☐
- Enable Tamper Alarm: ☐
- Enable Alarm for PIN Input Error: ☒
- Select Alarm Action Profile: profile1 (dropdown) [Edit Profile](#)
- Enable Non-scheduled Access Alarm: ☐
- Enable Non-authorized RFID Card Access Alarm: ☒**
- Select Alarm Action Profile: profile1 (dropdown) [Edit Profile](#)**

A red box highlights the last two items. A 'Save' button is at the bottom.

- **Functionality**

This feature enhancement is requested by customers from field. By enable this feature, any illegal card swiped trying to access the door will trigger alarm based on user's configuration, like below:

The 'Modify Alarm Action Profile' dialog box shows the following configuration:

- Alarm Action Profile Name: **BadCard_Swipped** (circled in red)
- ☒ Upload to Alarm Center
- ☒ Audio Alarm
- ☒ Audio Alarm to SIP Phone
- ☒ Alarm Output
- ☒ Send Email

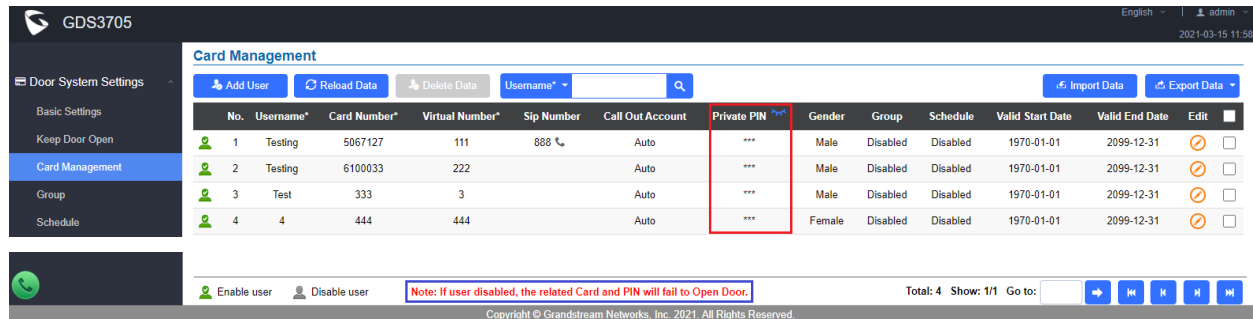

'Save' and 'Cancel' buttons are at the bottom.

User will get email, snapshot, etc., based on the Alarm Action Profile configured, to enhance the security of access control.

MODIFIED CARD MANAGEMENT PAGE

- **Web Configuration**

This option can be found under device web UI → Door System Settings → Card Management:

GDS3705 English | admin | 2021-03-15 11:58

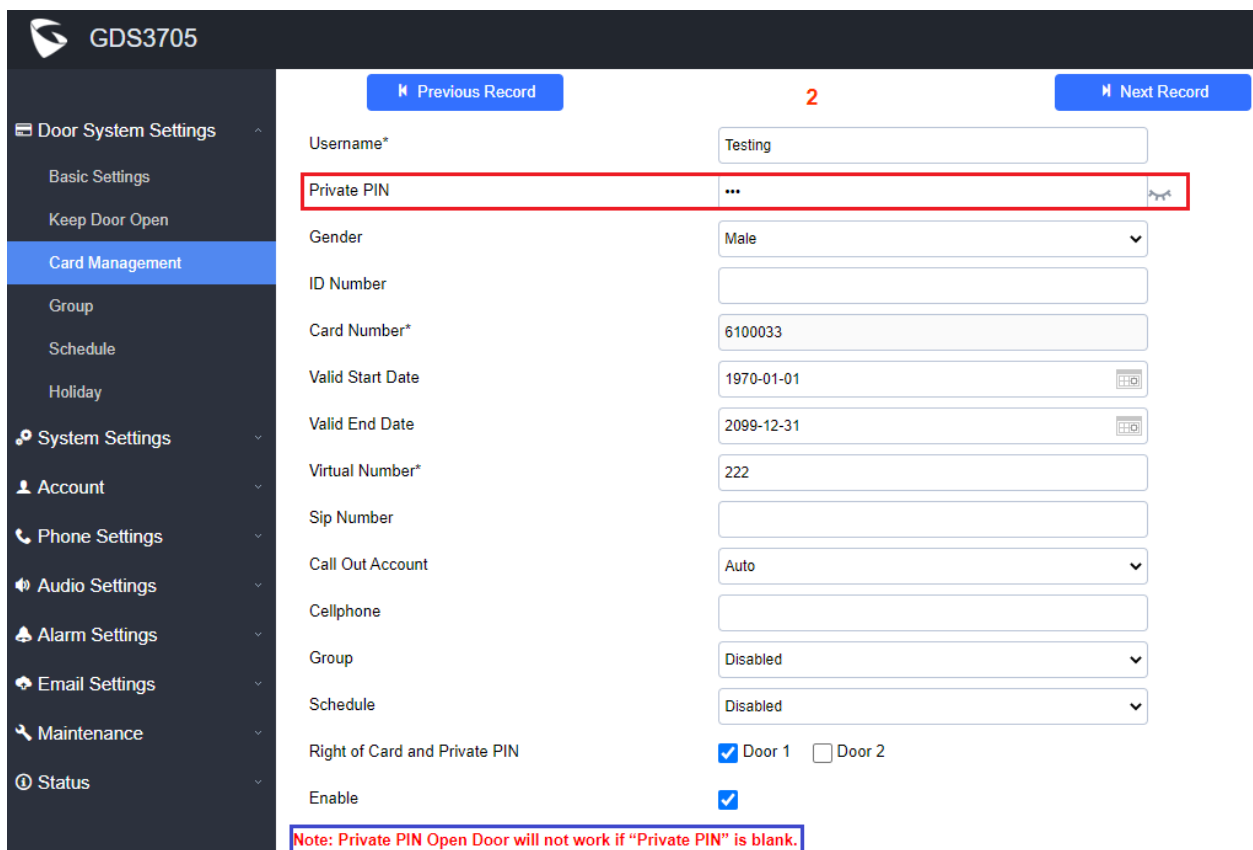

Card Management

Right of Card and Private PIN ☒ Door 1 ☐ Door 2

Enable ☒

Note: Private PIN Open Door will not work if "Private PIN" is blank.

- **Functionality**

This enhancement is based on customer's feedback to increase the usability with friendly UI. The "Private PIN" now can be viewed in same page to help administration work when enabled. This is especially helpful when GDS3705 used to replace traditional analogue access control by using "PIN#" to open door.

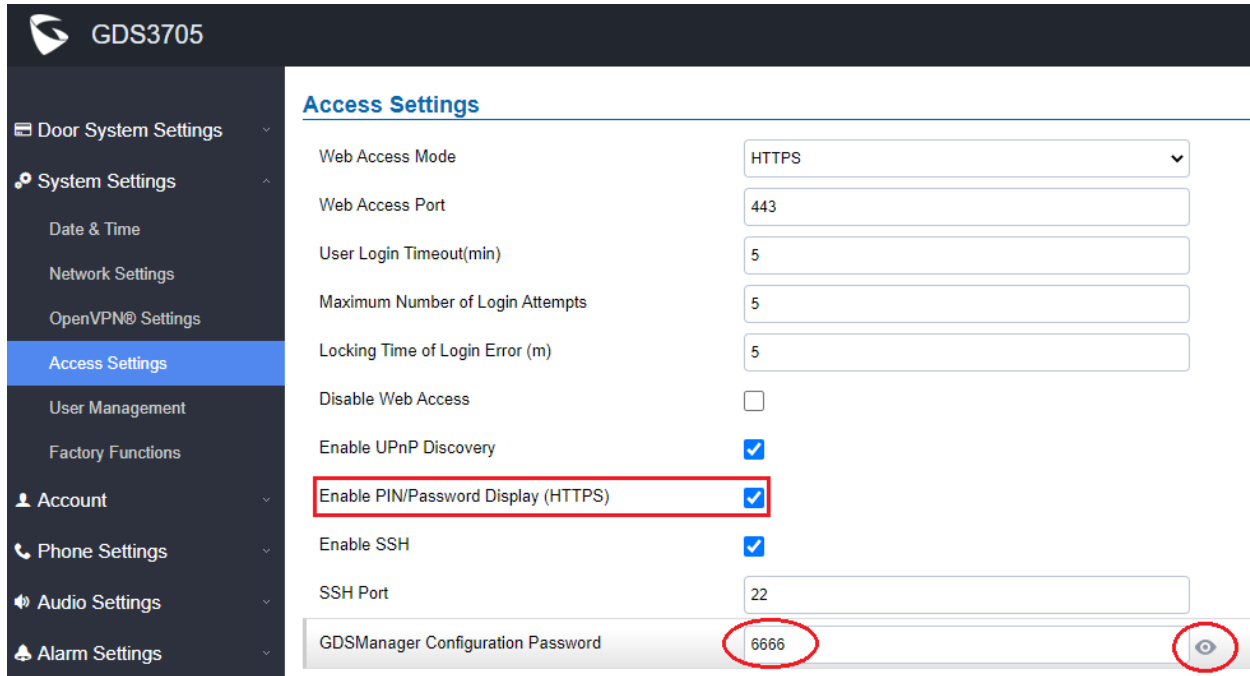

In the above screenshot, tips are added like:

- **Note: If user disabled, the related Card or PIN will fail to Open Door.**
- **Note: Private PIN Open Door will not work if "Private PIN" is blank.**

WEBUI PASSWORD DISPLAY WITH SECURITY AND CONVENIENCE

- Web Configuration**

This option can be found under device web UI → System Settings → Access Settings:

GDS3705

Access Settings

Web Access Mode	HTTPS
Web Access Port	443
User Login Timeout(min)	5
Maximum Number of Login Attempts	5
Locking Time of Login Error (m)	5
Disable Web Access	<input type="checkbox"/>
Enable UPnP Discovery	<input checked="" type="checkbox"/>
Enable PIN/Password Display (HTTPS)	<input checked="" type="checkbox"/>
Enable SSH	<input checked="" type="checkbox"/>
SSH Port	22
GDSManager Configuration Password	6666 

- Functionality**

This feature enhancement is a compromised solution to response the feedback from system integrators as well as the request from ITSP customers.

ITSP customer provisioning device and do not want end user to mess around the device, therefore requesting NO password should be displayed in webUI.

System integrators have different application scenes, therefore requesting password to be displayed once logged in as admin, just for configuration and management convenience.

This feature is enhanced to meet both requirements.

By default, the “Enable PIN/Password Display (HTTPS)” is disabled for ITSP customer. Service provider customers are using Configuration Template to provision the device, they can change related P values to change the configuration of the provisioned device.

System integrators can check and enable the PIN/Password Display in the “Access Setting”. Once enabled, there will be an “eye” icon displayed in the webUI, putting mouse cursor to the “eye” icon, the related password or PIN will be displayed at the webUI. Once mouse cursor moved away, the PIN/Password will be displayed as dot “.” as usual.

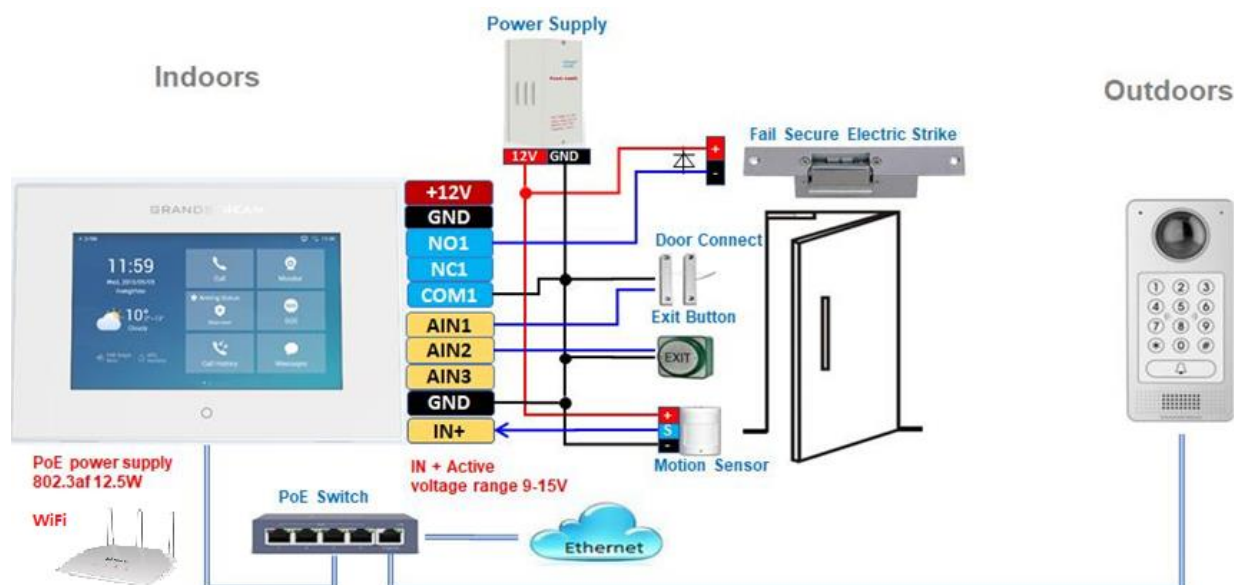

This feature ONLY works in HTTPS mode. Due to the insecurity of HTTP, PIN/Password will NOT be displayed. PIN/Password can ONLY be displayed in HTTPS mode.

GSC3570 SECURE OPEN DOOR BY PAIRING WITH GDS37XX

This secure open door new feature is a major enhancement to GDS37xx, but need to include GSC3570 to make it a whole solution. The GDS37xx/GSC3570 will be pairing together in LAN/WAN via IP/SIP, the door lock/strike will be wired to GSC3570 Alarm_Out port and controlled by GSC3570 (located inside) instead of GDS37xx (located outside). This way the strike control is inside the building with enhanced security.

- **Functionality**

This application scene will be similar like below:

Minimum firmware required for this to work:

- **Outdoor Device:** **GDS3710 (FW1.0.7.19) / GDS3705 (FW1.0.1.16)**
- **Indoor Device:** **GSC3570 (FW1.0.5.2)**

The GDS37xx can be powered via PoE; the GSC3570 can connect to same network via PoE or Wi-Fi.

For open door combination with GSC3570 and GDS37xx, if GSC3570 needs to control multiple GDS37xx, it has to use SIP and the related GDS37xx will control the strike/lock. The different GDS37xx doorbell call will have "One Button Open Door" displayed when in "Preview" (early media support) or when call established. The GSC3570 user will press the virtual button on touch screen to remotely open the door controlled by the related GDS37xx. There is no door limitation for such usage but only ONE DOOR can be opened at one time. It is just a SIP call open door application, but strike/lock control circuit is located outdoor.

For “Secure Open Door”, the GSC3570 is pairing with GDS37xx. The GSC3570 controlling the relay/strike/lock from inside the building (Unlike GDS37xx installed outside), but only ONE door can be controlled because GSC3570 only has one Relay Control circuit build in.

This pairing can be via LAN/WAN but LAN is recommended and actually most of the application scene are in LAN environment because most likely the GSC3570 and GDS37xx are in the same building.

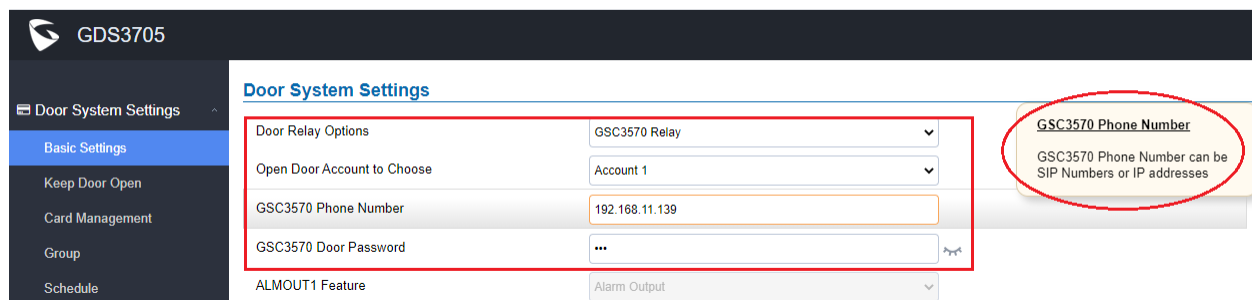

Although SIP/UCM over Internet/WAN also works, it is recommended to use static IP if the GSC3570 (inside) and GDS37xx (outside) are at same location in the same LAN. This setup is much simple and reliable in case there is network outage like Internet/UCM is down.

For the GSC3570 and GDS37xx pairing, it can be used via SIP only (Cloud or UCM); IP only (No SIP proxy or UCM but static IP address) and Mixed (SIP and fallback to IP if Proxy failed).

- **Web Configuration**

GDS3705: (FW: 1.0.1.16 or above)

This setup can be found under device web UI → Door System Settings → Basic Settings:

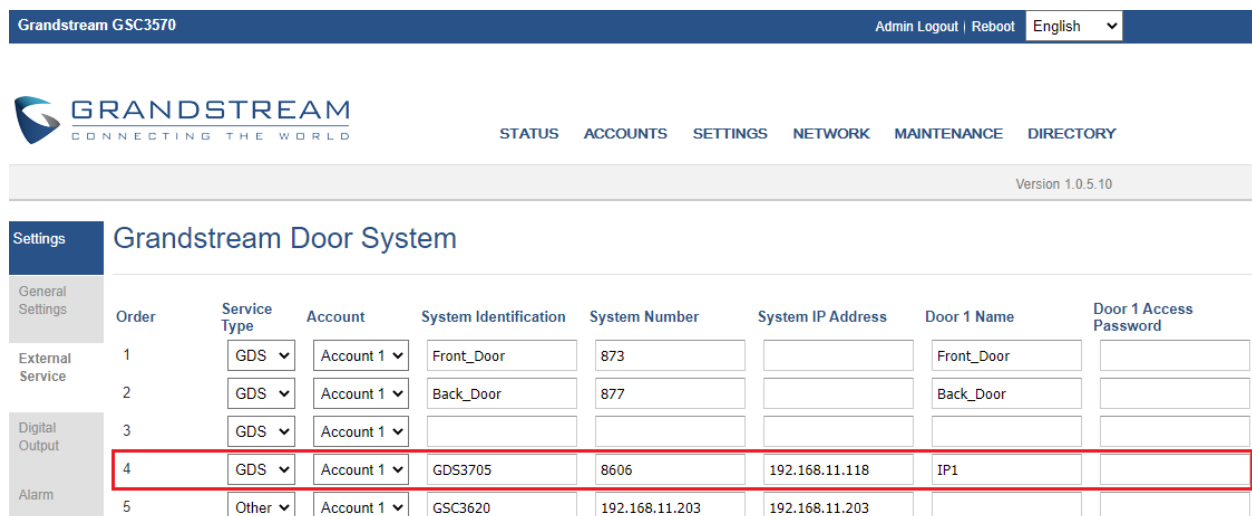

The screenshot shows the 'Basic Settings' page for the GDS3705. A red box highlights the 'Door Relay Options' section, which includes:

- Door Relay Options: GSC3570 Relay
- Open Door Account to Choose: Account 1
- GSC3570 Phone Number: 192.168.11.139
- GSC3570 Door Password: ...
- ALMOUT1 Feature: Alarm Output

A red circle highlights the 'GSC3570 Phone Number' field with a note: "GSC3570 Phone Number can be SIP Numbers or IP addresses".

GSC3570: (FW: 1.0.5.2 or above)

The GSC3570 side also need to be configured according, like below:

The screenshot shows the 'Grandstream GSC3570' settings page. The 'Settings' tab is selected, and the 'Grandstream Door System' section is expanded. A table lists the door system configurations:

Order	Service Type	Account	System Identification	System Number	System IP Address	Door 1 Name	Door 1 Access Password
1	GDS	Account 1	Front_Door	873		Front_Door	
2	GDS	Account 1	Back_Door	877		Back_Door	
3	GDS	Account 1					
4	GDS	Account 1	GDS3705	8606	192.168.11.118	IP1	
5	Other	Account 1	GSC3620	192.168.11.203	192.168.11.203		

A red box highlights the row for Order 4, which is the configuration for the GSC3570.

Settings

Digital Output	To door ▼
Account	Account 1 ▼
System Number	8606
System IP Address	192.168.11.123
Password	...
Unlock holding time	3

replace SIP extension with IP address
if no SIP proxy

Save Save and Apply Reset

If the solution/integration is using static IP address without SIP Proxy, all the devices involved (GDS/GSC/IP Phone) should choose “NAT Traversal” to “No” and should NOT “Use Random Port”, otherwise will have problem of ghost call (SIP signaling working but NO media).

Accounts

- Account 1
- Account 2
- General Settings
- Dialplan

Copyright © Grandstream Networks, Inc. 2021. All Rights Reserved.

- Functionality**

This feature enhancement is based on request and feedback from customers in field.

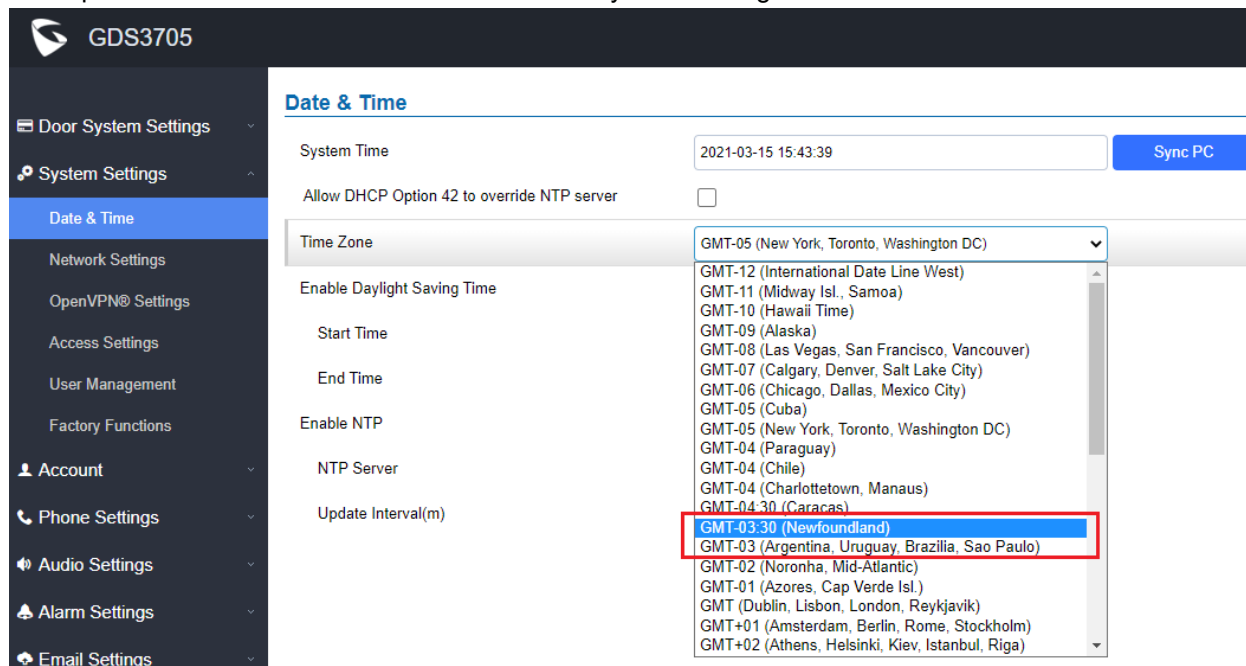

With this feature, the GDS3705 will behave and function the same as Grandstream IP Audio Phone.

When enable Account Active, but without configure SIP Server or User ID (leave those field blank), this feature will allow GDS3705 to receive calls via IP with different Account via different Port specified.

ADD "GMT-3:30" TIME ZONE SUPPORT

- **Web Configuration**

This option can be found under device web UI → System Settings → Date & Time:

GDS3705

<http://www.grandstream.com/support/resources/?title=GDS3705>

FIRMWARE VERSION 1.0.1.11

PRODUCT NAME

GDS3705 (*HW Supported: 1.1A, 1.2A, 1.3A, 1.4A, 1.4B*)

DATE

07/01/2020

SUMMARY OF UPDATE

This firmware update of GDS3705 is mainly for feature enhancement and bug fixes.

Factory Reset is recommended if upgrading from very old firmware, or experiencing abnormal webUI or missing parameters in the GUI. Please backup the data and configuration before factory reset, then import back after reset.

FIRMWARE APPLIES TO BELOW HW VERSION ONLY

HW Version	FW	Comments
GDS3705 HW1.1A	YES	
GDS3705 HW1.2A	YES	
GDS3705 HW1.3A	YES	
GDS3705 HW1.4A	YES	FW1.0.0.20 as Initial Version for this HW version
GDS3705 HW1.4B	YES	FW1.0.0.20 as Initial Version for this HW version

BUG FIX

- Fixed doorbell parallel hunting call one users reject the call will stop other group member ringing.
- Fixed Event Notification Logs still sending out when disabled or unauthorized card used to open door.
- Fixed device cannot be provisioned with general configuration file without MAC header of the unit
- Fixed doorbell call serial hunting will not move to next one if the first number rejected the call

ENHANCEMENT

- Added forcing user to change default password once default password used to log in
- Added WebRelay Open Door Feature
- Added OpenVPN support
- Added call termination button in the webUI
- Add configurable option to specify the cache time/refresh of DNS entries [Telefonica ITSP]
- Add ability to provision Card Management users [Telefonica ITSP]
- Added support for failover mechanism based on DNS SRV [Telefonica ITSP]
- Increased Unlock Holding Time to 30 minutes [Netia ITSP]
- Changed SIP Account Name to Display Name
- Added GDS37XX reboot/resync via SIP Notify
- Added ability in Event Log to display the attempts of unauthorized cards to open door
- Added support of User Name in HTTP Event Notification

KNOWN ISSUES

- Playing Prompt Audio from Proxy/UCM sometimes distorted.
- Dual Mic function is invalid.
- When doorbell volume set to 0 still hearing the ring back tone.
- Sending repeating registration packets to Server when receiving Terminate/Notify message.
- Silent Alarm to SIP phone still playing siren at phone side not stopping even after pressing phone's keypad which supposedly should stop the siren audio at SIP phone side.

NEW HTTP API

- P4208
- P28160
 - GET:[http|https]://<servername>/goform/config?cmd=get&type=sip
 - SET:[http|https]://<servername>/goform/config?cmd=set&Pxxx=<value>

- P15442: Door_System_Settings.Basic_Settings. Webrelay_Username. (Type: string; Max.length = 128)
- P15443: Door_System_Settings.Basic_Settings. Webrelay_Password. (Type: string; Max.length=128)
- P7050: System_Settings. OpenVPN® Settings.Openvpn_Enable. (value: 0: Disable; 1: Enable)
- P7051: System_Settings. OpenVPN® Settings.Openvpn_Server_Address. (Type: string. Max.length=256)
- P7052: System_Settings. OpenVPN® Settings.Openvpn_Port (value range: 0 ~ 65535)
- P2912: System_Settings. OpenVPN® Settings.Openvpn_Transport (value: 0: UDP; 1: TCP)
- P9902: System_Settings. OpenVPN® Settings.Openvpn_CA (Type: string; Max length = 8192)
- P9903: System_Settings. OpenVPN® Settings.Openvpn_Client_Certificate (Type: string; Max length = 8192)
- P9904: System_Settings. OpenVPN® Settings.Openvpn_Client_Key (Type: string; Max length = 8192)
- P8396: System_Settings. OpenVPN® Settings.Openvpn_Cipher_Method
(value: 0: Blowfish; 1:AES-128; 2:AES-256; 3:Triple-DES)
- P8394: System_Settings. OpenVPN® Settings.Openvpn_Username (Type: string; Max.length=256)
- P8395: System_Settings. OpenVPN® Settings.Openvpn_Password (Type: string; Max length is 256)
- P8460: System_Settings. OpenVPN® Settings. Additional_Options (Type: string; Max.length=1024)
- P4428: Maintenance.Upgrade.Disable_SIP_NOTIFY_Authentication (value: 0: disable; 1:enable)

MODIFIED P-VALUE

- P14101: Unlock Action Holding Time (*value range updated from: 0 ~ 20 to 0 ~ 1800*)
- P15466: Door 2 Unlock Action Holding Time (*value range updated from: 0 ~ 20 to 0 ~ 1800*)

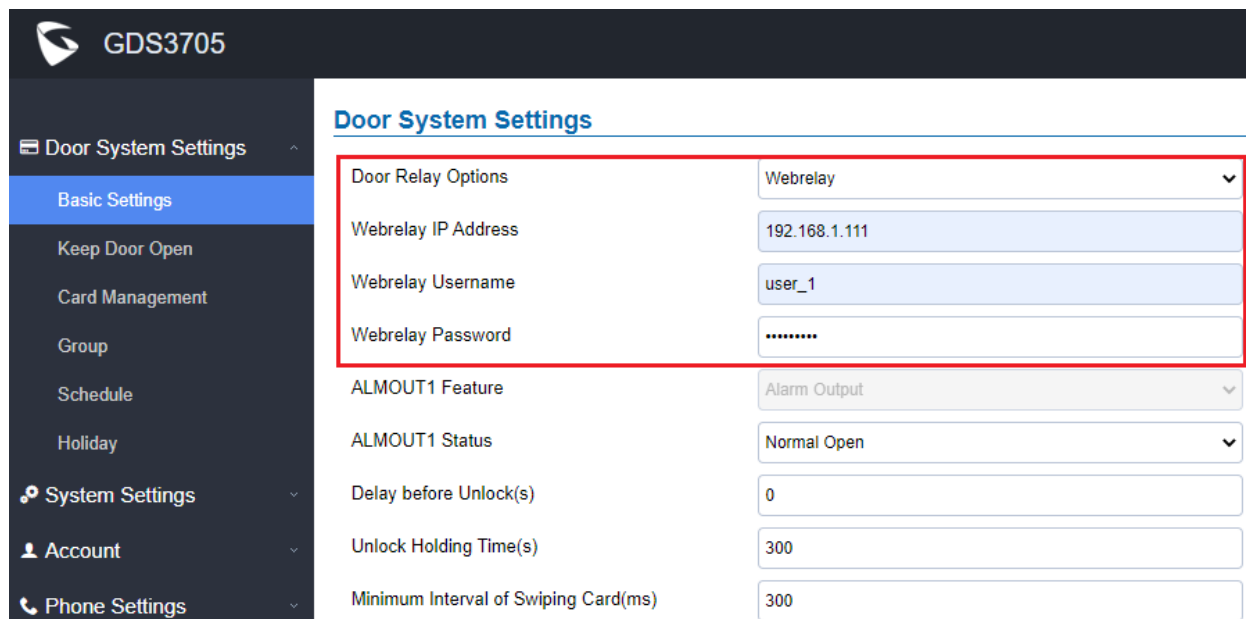

NEW FEATURES OVERVIEW

This section lists major new features or improvement and describes how to use them from the user's point of view.

SUPPORT WEBRELAY OPEN DOOR

- **Web Configuration**

This option can be found under device web UI → Door System Settings → Basic Settings → Door Relay Options: Pull down UI has two choices, Local Relay or Webrelay

Door System Settings	
Door Relay Options	Webrelay
Webrelay IP Address	192.168.1.111
Webrelay Username	user_1
Webrelay Password	*****
ALMOUT1 Feature	Alarm Output
ALMOUT1 Status	Normal Open
Delay before Unlock(s)	0
Unlock Holding Time(s)	300
Minimum Interval of Swiping Card(ms)	300

- **Functionality**

This is a major feature enhancement based on feedback from field. This feature allow customers to integrate GDS37XX with 3rd party webrelay to control door open over network, via script or other applications, to meet real application scene and enhance security.

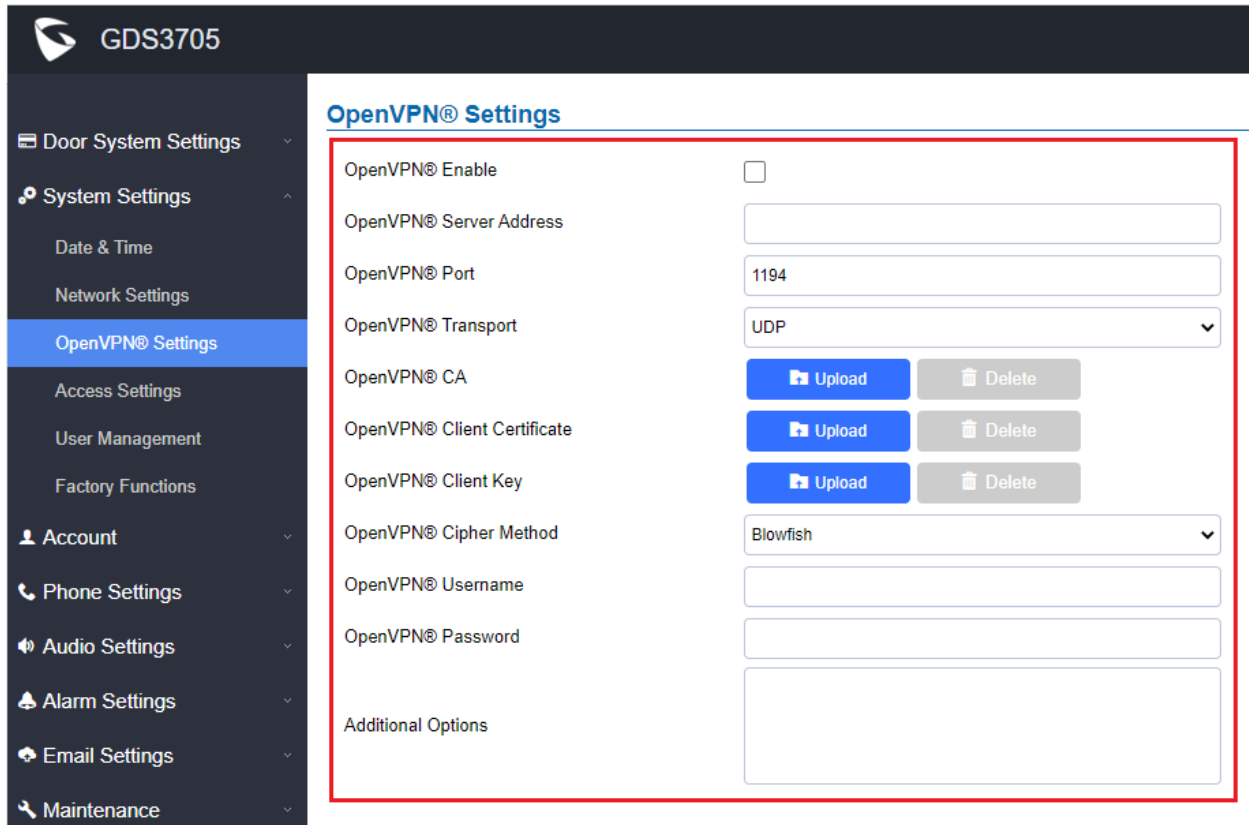

Users need to input webrelay IP address or domain name, as well as authentication information, to make this to work.

For details please refer to GDS37XX user manual, as well as the [webrelay technical document and user manual](#).

SUPPORT OPEN VPN

- **Web Configuration**

This option can be found under device web UI → System Settings → OpenVPN Settings:

GDS3705

OpenVPN® Settings

OpenVPN® Enable	<input type="checkbox"/>
OpenVPN® Server Address	<input type="text"/>
OpenVPN® Port	1194
OpenVPN® Transport	UDP
OpenVPN® CA	<input type="button" value="Upload"/> <input type="button" value="Delete"/>
OpenVPN® Client Certificate	<input type="button" value="Upload"/> <input type="button" value="Delete"/>
OpenVPN® Client Key	<input type="button" value="Upload"/> <input type="button" value="Delete"/>
OpenVPN® Cipher Method	Blowfish
OpenVPN® Username	<input type="text"/>
OpenVPN® Password	<input type="text"/>
Additional Options	<input type="text"/>

- **Functionality**

This is a major security enhancement for GDS37xx (GDS3705/3710). With OpenVPN supporting, customer can link GDS37xx over VPN network, operating and controlling it.

For detailed information, please refer to User Manual and Resource Center:

- GDS3705 User Manual:
http://www.grandstream.com/sites/default/files/Resources/GDS3705_UserManual.pdf
- HOW-TO Guide
<http://www.grandstream.com/support/resources/?title=GDS3705>

ADDED CALL TERMINATION BUTTON IN WEBUI

- **Web Configuration**

This option can be found when log in to the webUI, displayed at lower left corner of the UI:

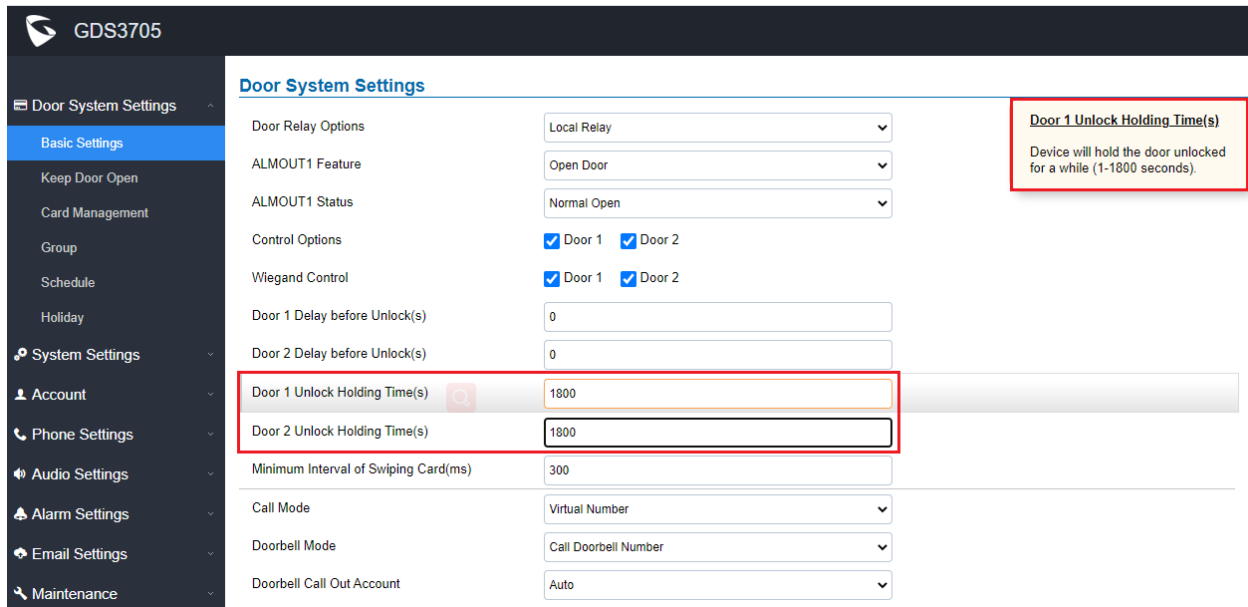

- **Functionality**

This feature allows user to make calls by input extension number or IP address, and terminate the calls from webUI, for user's convenience, like testing or verification.

INCREASED UNLOCK HOLDING TIME TO 30 MINUTES

- Web Configuration**

This option can be found under device web UI → Door System Settings → Basic Settings:

GDS3705

Door System Settings

- Basic Settings
- Keep Door Open
- Card Management
- Group
- Schedule
- Holiday
- System Settings
- Account
- Phone Settings
- Audio Settings
- Alarm Settings
- Email Settings
- Maintenance

Door System Settings

Door Relay Options	Local Relay
ALMOUT1 Feature	Open Door
ALMOUT1 Status	Normal Open
Control Options	<input checked="" type="checkbox"/> Door 1 <input checked="" type="checkbox"/> Door 2
Wiegand Control	<input checked="" type="checkbox"/> Door 1 <input checked="" type="checkbox"/> Door 2
Door 1 Delay before Unlock(s)	0
Door 2 Delay before Unlock(s)	0
Door 1 Unlock Holding Time(s)	1800
Door 2 Unlock Holding Time(s)	1800
Minimum Interval of Swiping Card(ms)	300
Call Mode	Virtual Number
Doorbell Mode	Call Doorbell Number
Doorbell Call Out Account	Auto

Door 1 Unlock Holding Time(s)
Device will hold the door unlocked for a while (1-1800 seconds).

- Functionality**

This feature enhancement is based on request and feedback from customers in field.

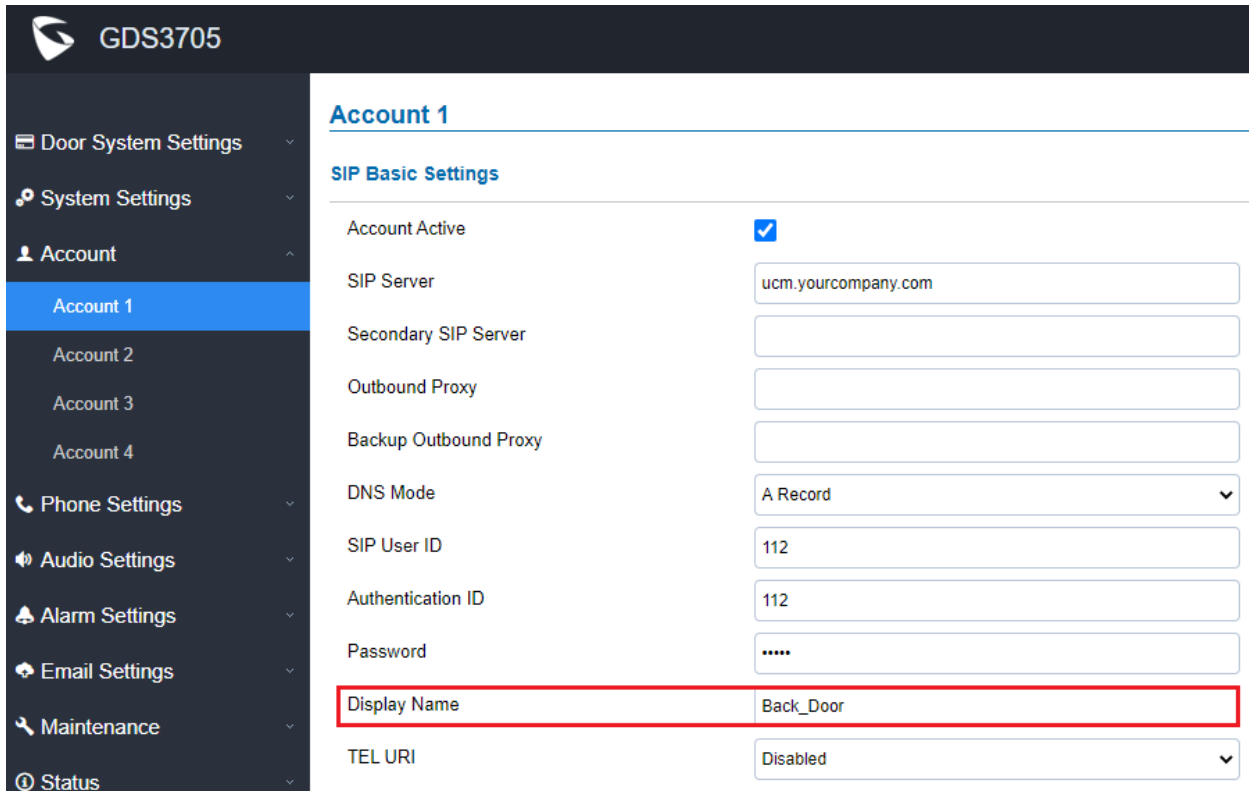

The Unlock Holding Time maximum value is increased from 20 seconds to 1800 seconds (or 30 minutes).

The request is raised by customers using GDS37XX in scenes like Senior House. This is special useful during COVID-19 pandemic period where Senior House is forbidden outside people visiting. Increase the unlock holding time so the people in wheelchair can push button to unlock the door, get outside to do some activities like pickup online ordering stuff, dropping trash, etc., and coming back, without other person involved. This will reduce human contract, and minimize the risk of COVID-19.

CHANGED SIP ACCOUNT NAME TO DISPLAY NAME

- **Web Configuration**

This option can be found under device web UI → Account → Account X:

The screenshot shows the web configuration interface for a GDS3705 device. The left sidebar contains a menu with options: Door System Settings, System Settings, Account, Account 1 (selected), Account 2, Account 3, Account 4, Phone Settings, Audio Settings, Alarm Settings, Email Settings, Maintenance, and Status. The main content area is titled 'Account 1' and 'SIP Basic Settings'. It includes fields for Account Active (checked), SIP Server (ucm.yourcompany.com), Secondary SIP Server, Outbound Proxy, Backup Outbound Proxy, DNS Mode (A Record), SIP User ID (112), Authentication ID (112), Password (masked), Display Name (Back_Door, highlighted with a red border), and TEL URI (Disabled).

- **Functionality**

The GDS3705 is an audio only device, unlike GDS3710, user cannot see who in at the door.

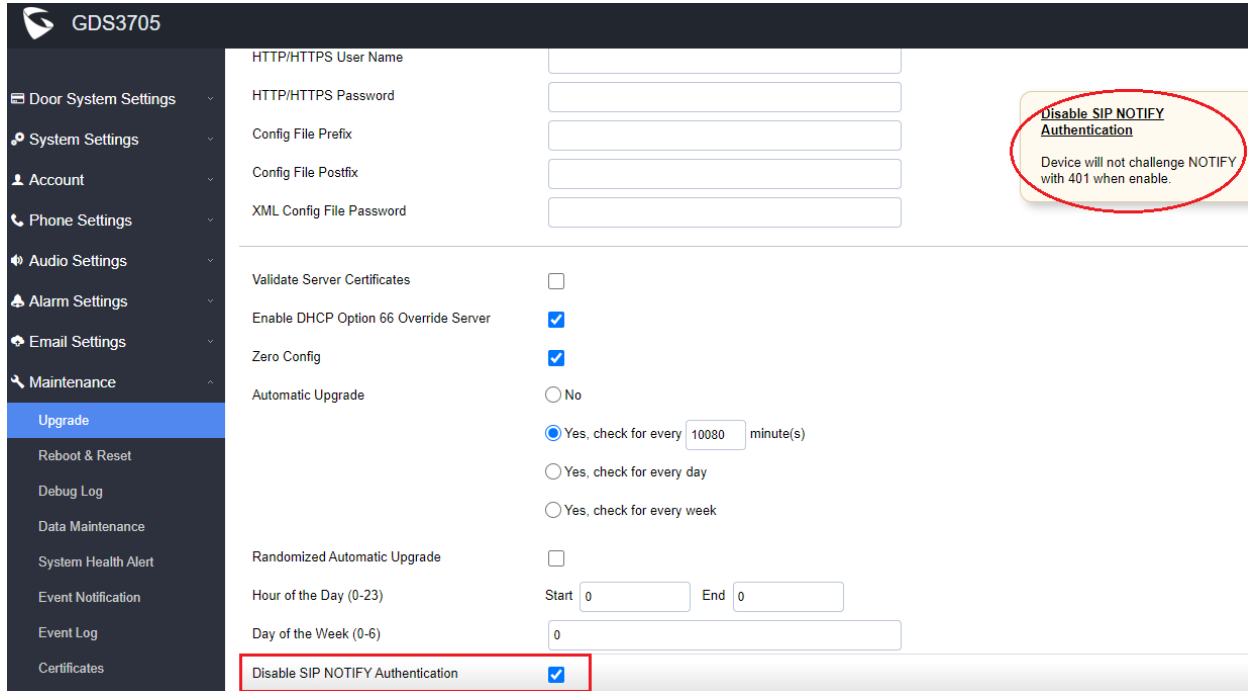

Adding this “Display Name” will also allow user receiving calls from GDS3705 knowing where the call is coming from (e.g.: which door or extension the call is made), improve user experience when user is using an IP phone with LCD display.

This feature enhancement is also in response to customer’s feedback from field.

ADDED REBOOT/RESYNC VIA SIP NOTIFY

- Web Configuration**

This option can be found under device web UI → Maintenance → Upgrade:

GDS3705

- Door System Settings
- System Settings
- Account
- Phone Settings
- Audio Settings
- Alarm Settings
- Email Settings

 - Data Maintenance
 - System Health Alert
 - Event Notification
 - Event Log
 - Certificates

HTTP/HTTPS User Name	<input type="text"/>
HTTP/HTTPS Password	<input type="password"/>
Config File Prefix	<input type="text"/>
Config File Postfix	<input type="text"/>
XML Config File Password	<input type="password"/>
Validate Server Certificates	<input type="checkbox"/>
Enable DHCP Option 66 Override Server	<input checked="" type="checkbox"/>
Zero Config	<input checked="" type="checkbox"/>
Automatic Upgrade	<input type="radio"/> No <input checked="" type="radio"/> Yes, check for every <input type="text" value="10080"/> minute(s) <input type="radio"/> Yes, check for every day <input type="radio"/> Yes, check for every week
Randomized Automatic Upgrade	<input type="checkbox"/>
Hour of the Day (0-23)	Start <input type="text" value="0"/> End <input type="text" value="0"/>
Day of the Week (0-6)	<input type="text" value="0"/>
Disable SIP NOTIFY Authentication	<input checked="" type="checkbox"/>

Disable SIP NOTIFY Authentication
 Device will not challenge NOTIFY with 401 when enable.

- Functionality**

This feature is disabled with security authentication previously based on request from ITSP customers, but lots of system integrators or system administrators still want to use this feature to remote reboot the GDS37xx for maintenance, firmware upgrade, re-provisioning, etc.

Based on feedback from customers in field, this feature is added back by a switch. By Default this feature is disabled with 401 Challenge NOTIFY.

Customer who need this feature to reboot device need manually check “Disable SIP NOTIFY Authentication” option (with understanding of potential security risk), then the device will response to the related SIP NOTIFY message to reboot the device (at some particular time with the control scripts from server), to do routine maintenance, firmware upgrade, etc., for the convenience of system administrator.

FIRMWARE VERSION 1.0.1.6

PRODUCT NAME

GDS3705 (*HW Supported: 1.1A, 1.2A, 1.3A, 1.4A, 1.4B*)

DATE

12/28/2019

SUMMARY OF UPDATE

This is a major feature update for GDS3705 as well as bug fixes, mainly for ITSP customers.

Factory Reset is recommended if upgrading from very old firmware, or experiencing abnormal webUI or missing parameters in the GUI. Please backup the data and configuration before factory reset, then import back after reset.

FIRMWARE APPLIES TO BELOW HW VERSION ONLY

HW Version	FW	Comments
GDS3705 HW1.1A	YES	
GDS3705 HW1.2A	YES	
GDS3705 HW1.3A	YES	
GDS3705 HW1.4A	YES	FW1.0.0.20 as Initial Version for this HW version
GDS3705 HW1.4B	YES	FW1.0.0.20 as Initial Version for this HW version

BUG FIX

- Fixed abnormal open door sometimes alarm may not trigger issue
- Fixed virtual number peering call not working between GDS and SIP phone
- Fixed device cannot be re-provisioned when CFG file includes firmware upgrade and provisioning parameters
- Fixed rejecting call did not send 486 busy here (3CX IOT)
- Fixed 200 OK SDP out of order (3CX IOT)
- Fixed not recognizing DTMF input (3CX IOT)

ENHANCEMENT

- Added support for failover mechanism based on DNS SRV
- Added siren alarming function when door opened abnormally (special wiring required)
- Added including Holidays at Keep Door Open schedule
- Added reset/restore factory default password via special keypad combination operations

KNOWN ISSUES

- Playing Prompt Audio from Proxy/UCM sometimes distorted.
- Dual Mic function is invalid.
- When doorbell volume set to 0 still hearing the ring back tone.
- Sending repeating registration packets to Server when receiving Terminate/Notify message.
- Silent Alarm to SIP phone still playing siren at phone side not stopping even after pressing phone's keypad which supposedly should stop the siren audio at SIP phone side.

NEW HTTP API

NEW FEATURES OVERVIEW

This section lists major new features or improvement and describes how to use them from the user's point of view.

SUPPORT FAILOVER MECHANISM ON DNS SRV

- **Web Configuration**

This option can be found under device web UI → Account → Account X (X=1, 2, 3, and 4):

GDS3705

- Door System Settings
- System Settings
- Account
 - Account 1**
 - Account 2
 - Account 3
 - Account 4
- Phone Settings
- Audio Settings
- Alarm Settings
- Email Settings
- Maintenance
- Status

Account 1

SIP Basic Settings

Account Active	<input checked="" type="checkbox"/>
Account Name	DNS.SRV
SIP Server	sip.server.com
Secondary SIP Server	backup_sip.server.com
Outbound Proxy	primary.proxy.com
Backup Outbound Proxy	backup.proxy.com
DNS Mode	SRV ▼
SIP User ID	12345678
Authentication ID	87654321
Password
TEL URI	Disabled ▼

- **Functionality**

This is a major feature enhancement for Service Provider, via DNS SRV (mainly for BroadSoft certified Soft Switch for major Internet Telephony Service Providers). Service providers can use this feature to provider smooth service transition backup in case service down.

GDS3705

- Door System Settings
- System Settings
- Account

Outbound Proxy Mode	<input type="text" value=""/>
Validate Incoming Messages	<input type="checkbox"/>

Outbound Proxy Mode

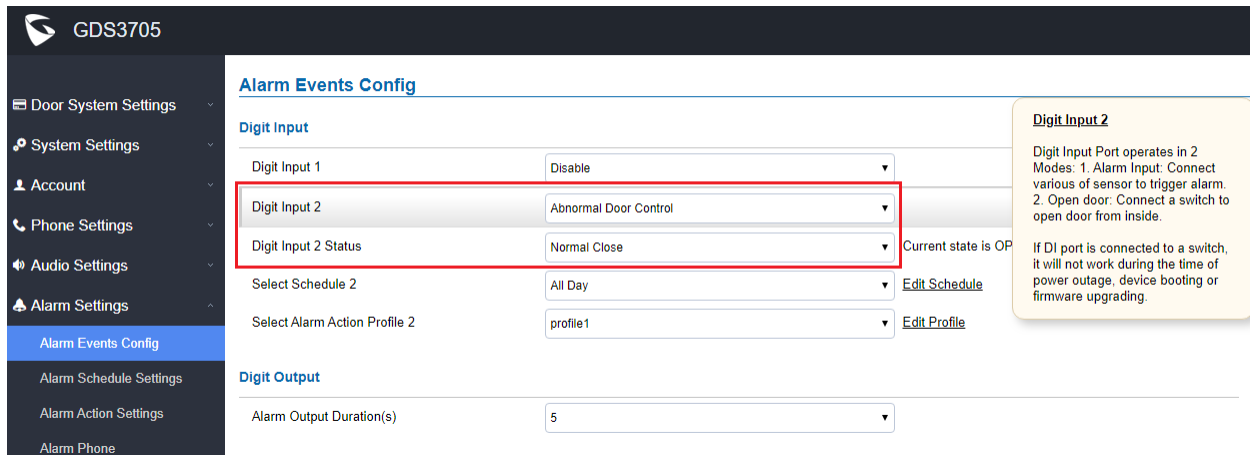

Outbound proxy mode is to place in route header in sending SIP messages, or they can be always sent to outbound proxy.

In the device web UI → Account X (X=1, 2, 3, and 4) → SIP Advanced Settings → Special Feature:
 There is a new feature specially designed for Telefonica Spain to match the service provided by Telefonica to their customers. Just need to enable this feature via either WebUI or Provisioning.

SIREN ALARMING WHEN DOOR OPENED ABNORMALLY (SPECIAL WIRING REQUIRED)

- **Web Configuration**

This option can be found under device web UI → Alarm Settings → Alarm Events Config → Digit Input:

GDS3705

Alarm Events Config

Digit Input

Digit Input 1	Disable	
Digit Input 2	Abnormal Door Control	
Digit Input 2 Status	Normal Close	Current state is OP
Select Schedule 2	All Day	Edit Schedule
Select Alarm Action Profile 2	profile1	Edit Profile

Digit Input 2

Digit Input Port operates in 2 Modes. 1. Alarm Input: Connect various of sensor to trigger alarm. 2. Open door: Connect a switch to open door from inside.

If DI port is connected to a switch, it will not work during the time of power outage, device booting or firmware upgrading.

Digit Output

Alarm Output Duration(s)	5
--------------------------	---

- **Functionality**

This is a major security enhancement for GDS37xx (GDS3705/3710) when device be tampered to open the door abnormally.

When this feature enabled (**special wiring required, see below wiring diagram**), abnormal open door will be detected by DI port (Alarm_In2 or IN2 in below diagram showed) if wired correctly (connecting the COMx port to DIx port) therefore trigger **siren alarm**. Once abnormal open door alarm triggered, the **siren** will sound non-stop, until manually override by related person.

There are several ways to stop and disable the alarm:

- 1) Power cycle the GDS37xx
- 2) Pick up the Alarm Phone Call (if configured)
- 3) Open Door using PIN (either public PIN or private PIN)

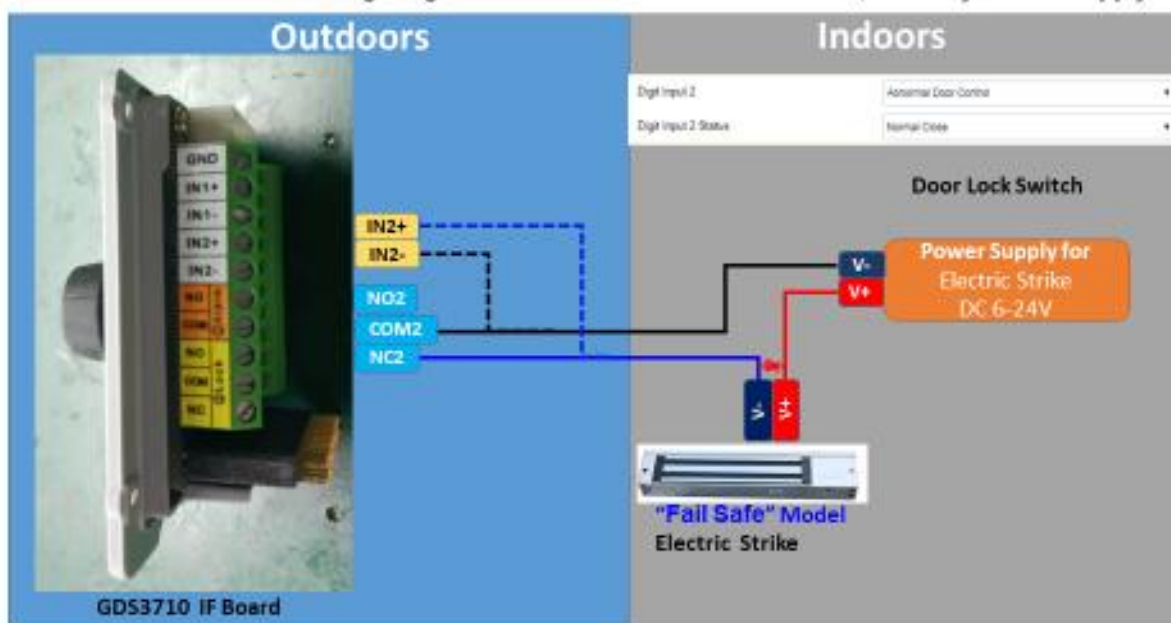

Once alarm triggered, the GDS3705 will play **siren** sound, send email to administrator (if configured SMTP); call the configured alarm SIP phone, send the alarm output (if connected). User will only be able to disable the siren using the 3 methods mentioned above.

Detailed action information please refer to GDS37xx User Manual, “Alarm Action Settings” configuration. Below are some diagrams showing the correct wiring to enable this new security enhancement feature.

NOTE:

- GDS3705 and GDS3710 sharing the **SAME interface backboard**. For convenience, the below diagrams are using GDS3710 as example.
- GDS3705 is exactly the same as GDS3710 in wiring for this feature. This means the interface backboard can be shared between GDS3705/3710. **Swap the device does NOT need to rewire.**

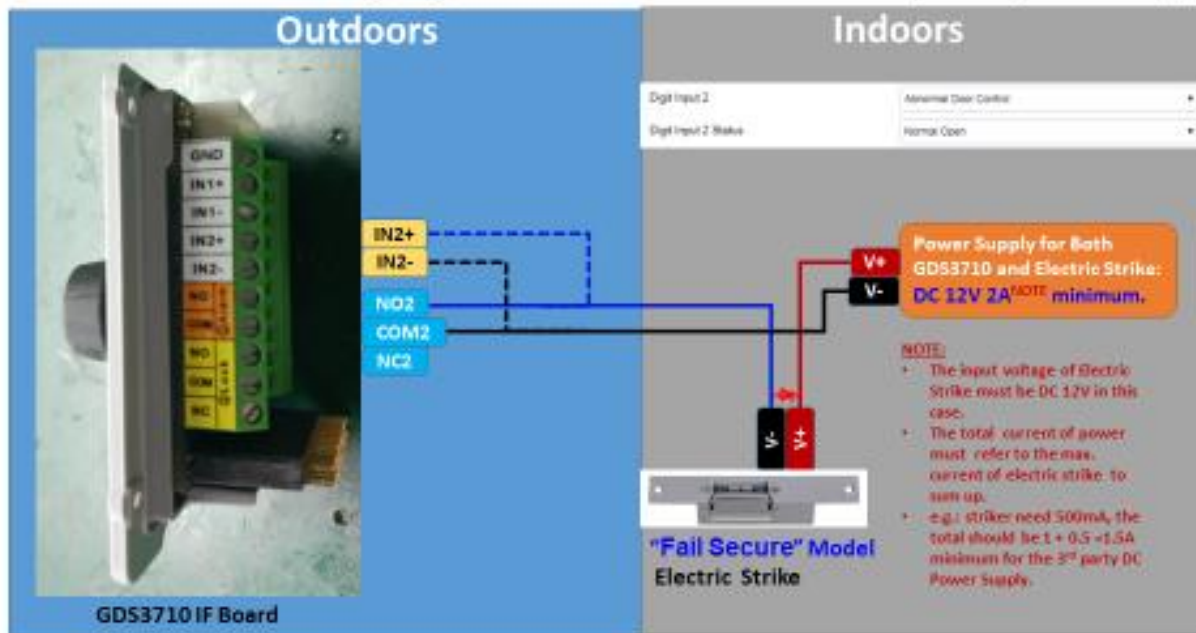

GDS3710 Connection & Wiring Diagrams ---- "Fail Safe" Electric Strike, 3rd Party Power Supply

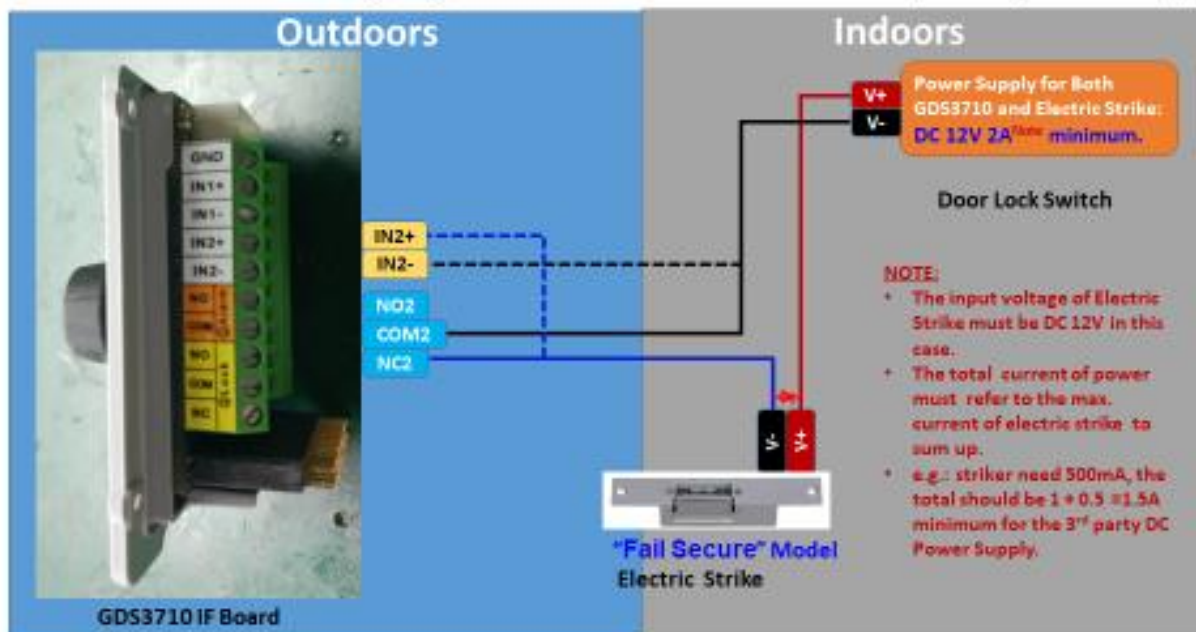

GDS3710 Connection & Wiring Diagrams ---- "Fail Safe" Electric Strike, 3rd Party Power Supply

GDS3710 Connection & Wiring Diagrams ---- "Fail Secure" Electric Strike, 3rd Party Power Supply

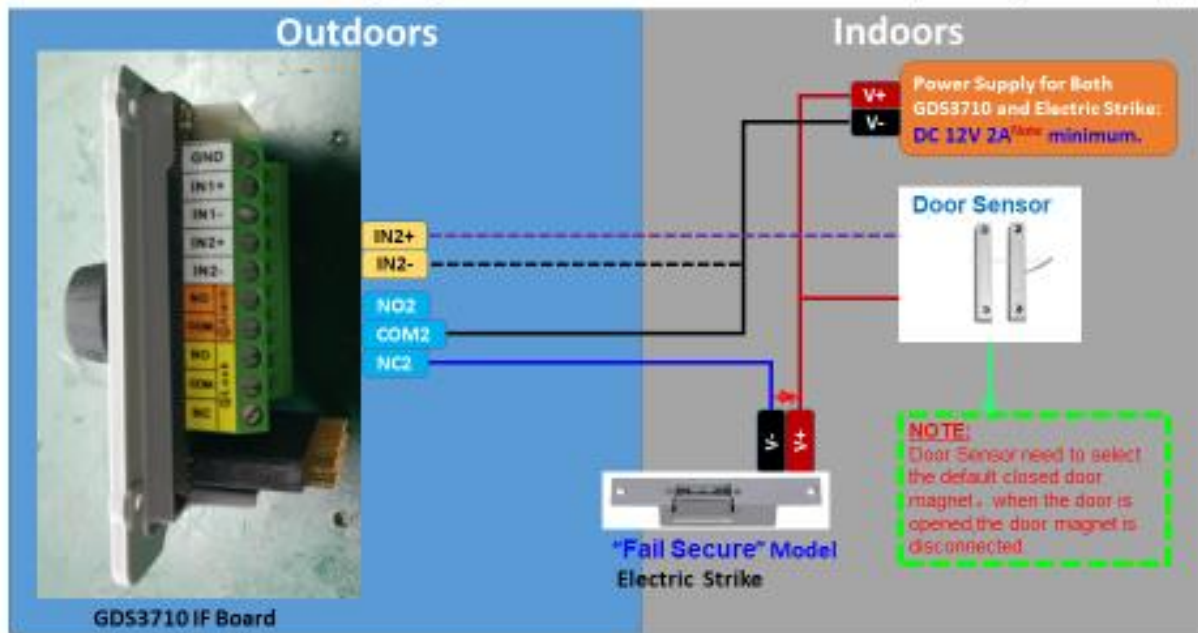

GDS3710 Connection & Wiring Diagrams ---- "Fail Secure" Electric Strike, 3rd Party Power Supply

If 3rd party door sensor installed, customer could wire the door sensor signal directly into the DI port (DI2 in below example) to trigger the alarm if the door opened abnormal. See below diagram:

GDS3710 Connection & Wiring Diagrams ---- "Fail Secure" Electric Strike, 3rd Party Power Supply

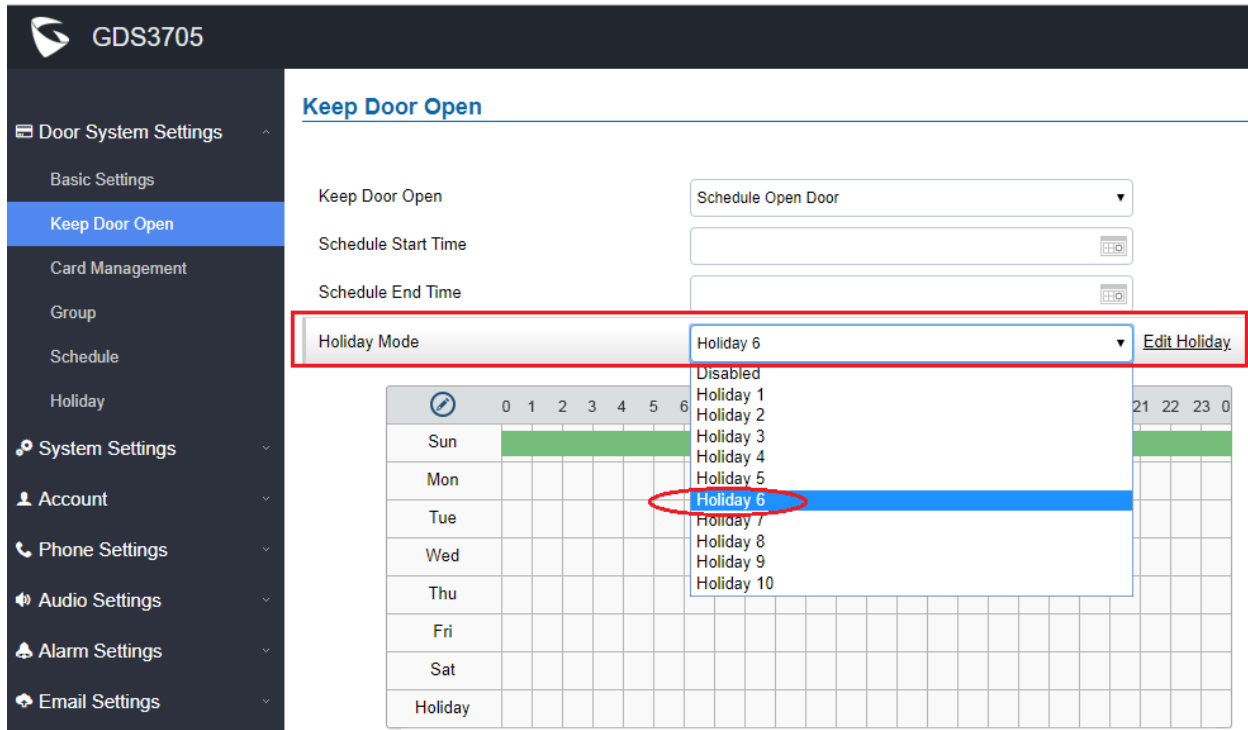

For detailed information, please refer to User Manual and Resource Center:

- GDS3705 User Manual:

- **Functionality**

This feature is implemented based on field customer feedback either.

When configure Keep Door Open schedule, customers now can also specify which Holiday Schedule to be included into the Keep Door Open schedule, therefore make the GDS37xx more user friendly in such application scene configuration.

RESET FACTORY PASSWORD VIA SPECIAL KEY COMBINATION OPERATION

- **Functionality**

This is a new enhancement feature requested by ITSP service providers as well as lots of system integrators from Forum. This feature allows customers to reset the device administrator password to factory default via keypad operation through some special key combination.

When performing this operation, ONLY password will be reset back to factory default. All other setting or parameters will NOT be changed and will remain the same. This feature is specially designed for field engineers or technicians when dispatched in field but for some reason the administrator password is not available therefore not able to access the GDS37xx device to do the related maintenance.

Here are the steps to do such password reset operation via keypad:

Encoding Rules:

- Alphabet A – Z mapping to digit 1 – 26 respectively, no difference in lower or up case.

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26

NOTE:

- Suggest decoding the MAC and Password and write on paper before doing the reset operation.

Prerequisite condition:

- 1) MAC address of the GDS37xx (check the sticker at back of the device)
- 2) Default password of the GDS37xx (check the sticker at the back of the device)
- 3) Correct decoding the last 6 MAC address into digits (refer to encoding rule)
- 4) Correct decoding the default password into digits (refer to encoding rule)
- 5) Finish keypad input within 1 minute

Operation Steps:

- 1) When device is idle, input the special keypad combination with format: *****last_6_MAC**#**
- 2) Device will reach restore mode after correct digits in Step 1) entered. The backlight of keypad will flash quickly to tell operator the device is now in password reset/restore mode.
- 3) Operator will enter the correct decoded default password ending with # with format:
default_password_code# via the keypad within 60 seconds.
- 4) If wrong code combination entered, the GDS37xx will beep with error sound (three short beeps) then exit the password reset mode, and the backlight will stop flashing.
- 5) If the correct default password decode entered within 60 seconds, GDS37xx will play a long beep sound (advising correct operation), the device will reboot itself automatically.
- 6) If keypad entry time out (not finish the input within 60 seconds), the device will exit this password reset mode automatically and stop the backlight flashing.

After successful password reset, operator will then be able to log into the GDS37xx webUI with default password, all the configuration inside the device will be the same and will NOT be changed.

For example:

Decoding the string into digits and write to paper before doing the operation:

<i>Device with last 6 MAC address:</i>	33DDDD
<i>Decoding the last 6 MAC to digits would be:</i>	334444
<i>Default password is:</i>	xwpxz6AA
<i>Decoding the default password to digits would be:</i>	2423162426611

- 1) Enter *****334444**#** via keypad, get into the password reset mode, the keypad backlight will flash quickly.
- 2) Within 60 seconds, enter **2423162426611#**, the device will play one long beep then reboot itself.
- 3) Wait the device finishing boot up, log in the webUI using the default password, **xwpxz6AA**

FIRMWARE VERSION 1.0.1.3

PRODUCT NAME

GDS3705 (*HW Supported: 1.1A, 1.2A, 1.3A, 1.4A, 1.4B*)

DATE

07/30/2019

SUMMARY OF UPDATE

This is a major feature update for GDS3705 as well as bug fixes, mainly for the ITSP features.

Factory Reset is recommended if upgrading from very old firmware, or experiencing abnormal webUI or missing parameters in the GUI. Please backup the data and configuration before factory reset, then import back after reset.

FIRMWARE APPLIES TO BELOW HW VERSION ONLY

HW Version	FW	Comments
GDS3705 HW1.1A	YES	
GDS3705 HW1.2A	YES	
GDS3705 HW1.3A	YES	
GDS3705 HW1.4A	YES	FW1.0.0.20 as Initial Version for this HW version
GDS3705 HW1.4B	YES	FW1.0.0.20 as Initial Version for this HW version

BUG FIX

- Fixed audio setting customize ringtone has prompt in Chinese.
- Fixed reboot required to take effect when enable/disable DHCP Option 42.

ENHANCEMENT

- Added ITSP support: re-registration before expiration.
- Added “Only accept incoming SIP call from proxy server” to enhance security and prevent ghost calls.
- Added support for DHCP Option 42.
- Added support for Voice Frame Per TX at audio settings.
- Added support of separated webUI credentials for GDSManager.
- Added ability to enable multiple audio codecs simultaneously and specify priority of codecs.
- Added support for failover mechanism based on DNS SRV.
- Added support for schedule firmware upgrade/provisioning.
- Added support for G.729 audio codec.

KNOWN ISSUES

- Playing Prompt Audio from Proxy/UCM sometimes distorted.
- Dual Mic function is invalid.
- When doorbell volume set to 0 still hearing the ring back tone.
- Sending repeating registration packets to Server when receiving Terminate/Notify message.
- Silent Alarm to SIP phone still playing siren at phone side not stopping after pressing phone's keypad.

NEW FEATURES OVERVIEW

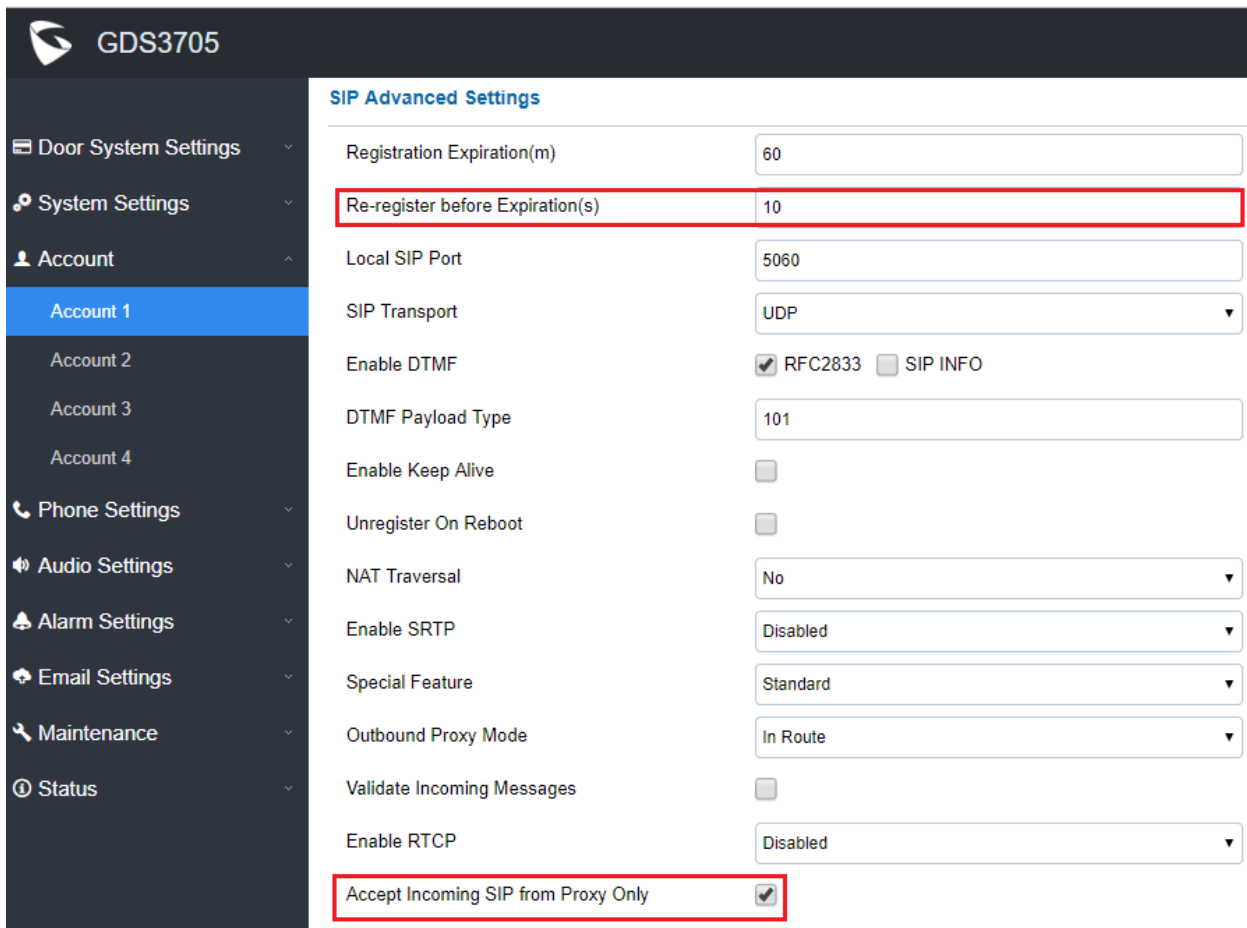

This section lists major new features and describes how to use them from the user's point of view.

Advanced SIP Settings for ITSPs: Re-register & Accept incoming calls from Proxy Only

- Web Configuration**

New feature added in SIP Advanced Settings allows server providers (ITSP) to provide specified service to the customers.

This option can be found under device web UI: Account → Account X (X = 1, 2, 3 and 4):

The screenshot shows the web configuration interface for a Grandstream GDS3705 device. The left sidebar contains a menu with categories like Door System Settings, System Settings, Account, Phone Settings, Audio Settings, Alarm Settings, Email Settings, Maintenance, and Status. Under the 'Account' category, 'Account 1' is selected. The main content area displays the 'SIP Advanced Settings' for Account 1. The settings include fields for Registration Expiration (60m), Re-register before Expiration (10s), Local SIP Port (5060), SIP Transport (UDP), Enable DTMF (RFC2833), DTMF Payload Type (101), Enable Keep Alive, Unregister On Reboot, NAT Traversal (No), Enable SRTP (Disabled), Special Feature (Standard), Outbound Proxy Mode (In Route), Validate Incoming Messages, and Enable RTCP (Disabled). Two settings are highlighted with red boxes: 'Re-register before Expiration(s)' set to 10, and 'Accept Incoming SIP from Proxy Only' which is checked.

SIP Advanced Settings	
Registration Expiration(m)	60
Re-register before Expiration(s)	10
Local SIP Port	5060
SIP Transport	UDP
Enable DTMF	<input checked="" type="checkbox"/> RFC2833 <input type="checkbox"/> SIP INFO
DTMF Payload Type	101
Enable Keep Alive	<input type="checkbox"/>
Unregister On Reboot	<input type="checkbox"/>
NAT Traversal	No
Enable SRTP	Disabled
Special Feature	Standard
Outbound Proxy Mode	In Route
Validate Incoming Messages	<input type="checkbox"/>
Enable RTCP	Disabled
Accept Incoming SIP from Proxy Only	<input checked="" type="checkbox"/>

- Functionality**

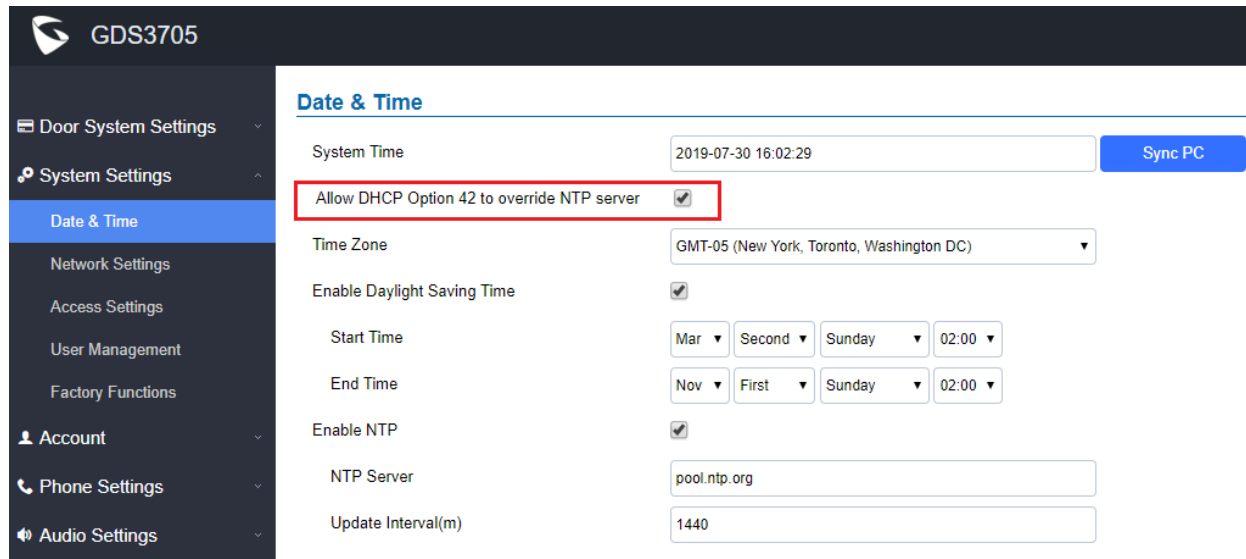

This feature is added to meet the requirement of ITSP customers. Service provider (ITSP) customers can configure the device to the customers.

DHCP Option 42

- **Web Configuration**

This feature is added to allow service providers (ITSPs) to configure system time based on DHCP server configuration.

The option of this webUI can be found: System Settings → Date & Time:

GDS3705

Date & Time

System Time: 2019-07-30 16:02:29 Sync PC

Allow DHCP Option 42 to override NTP server ☒

Time Zone: GMT-05 (New York, Toronto, Washington DC) ▼

Enable Daylight Saving Time ☒

Start Time: Mar ▼ Second ▼ Sunday ▼ 02:00 ▼

End Time: Nov ▼ First ▼ Sunday ▼ 02:00 ▼

Enable NTP ☒

NTP Server: pool.ntp.org

Update Interval(m): 1440

- **Functionality**

This feature is added to allow service provider customer to control system time via DHCP server.

NOTE:

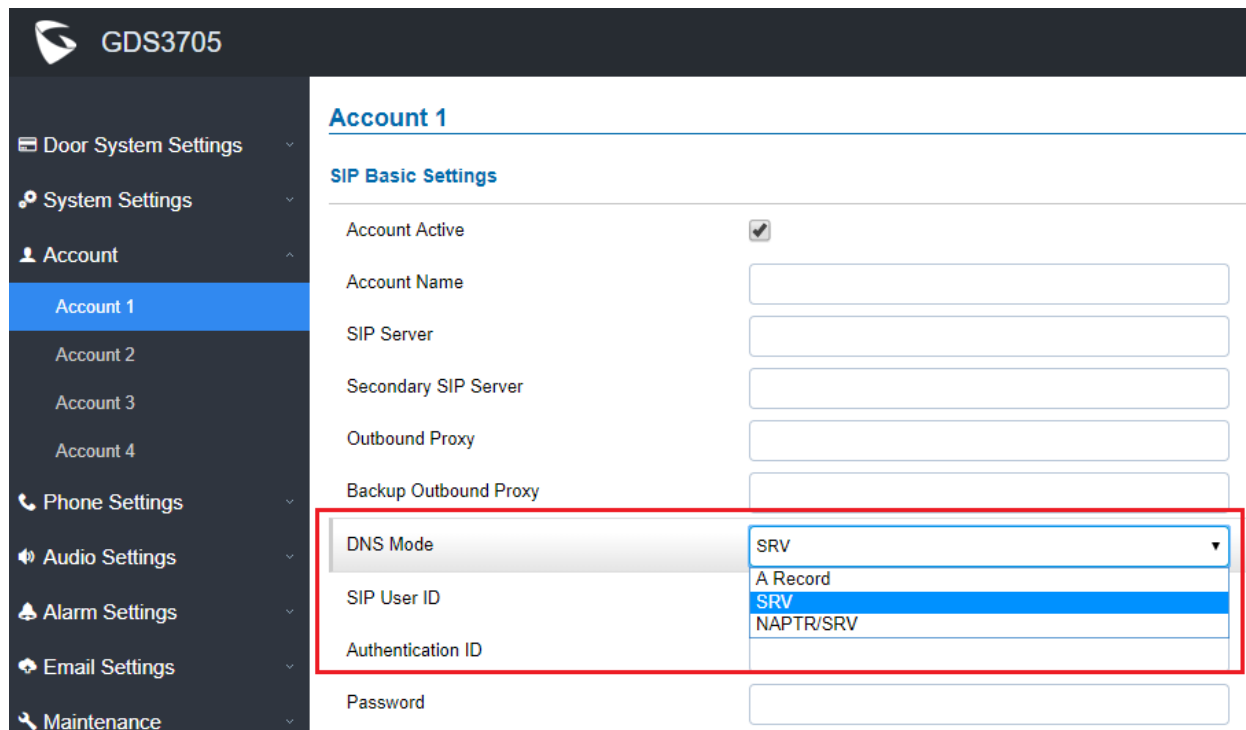

- This feature is designed for Service Provider, or Service Technician or Installers.
- End users without necessary knowledge are strongly discouraged to use it, avoiding incorrect system time caused by misconfiguration.

DNS SRV Support

- **Web Configuration**

This feature is added to allow service provider customers (ITSP) provide backup service in case there is an interruption. This is more like IP Phone feature from ITSPs.

The option of this webUI can be found: Account → Account X (X = 1, 2, 3 and 4)

The screenshot displays the web configuration interface for a Grandstream GDS3705 device. The left sidebar shows the navigation menu with 'Account' selected, and 'Account 1' is the active sub-menu. The main content area is titled 'Account 1' and 'SIP Basic Settings'. It contains several configuration fields: 'Account Active' (checked), 'Account Name', 'SIP Server', 'Secondary SIP Server', 'Outbound Proxy', 'Backup Outbound Proxy', 'DNS Mode' (a dropdown menu with 'SRV' selected and options 'A Record', 'SRV', and 'NAPTR/SRV' visible), 'SIP User ID', 'Authentication ID', and 'Password'. A red rectangle highlights the 'DNS Mode' dropdown menu.

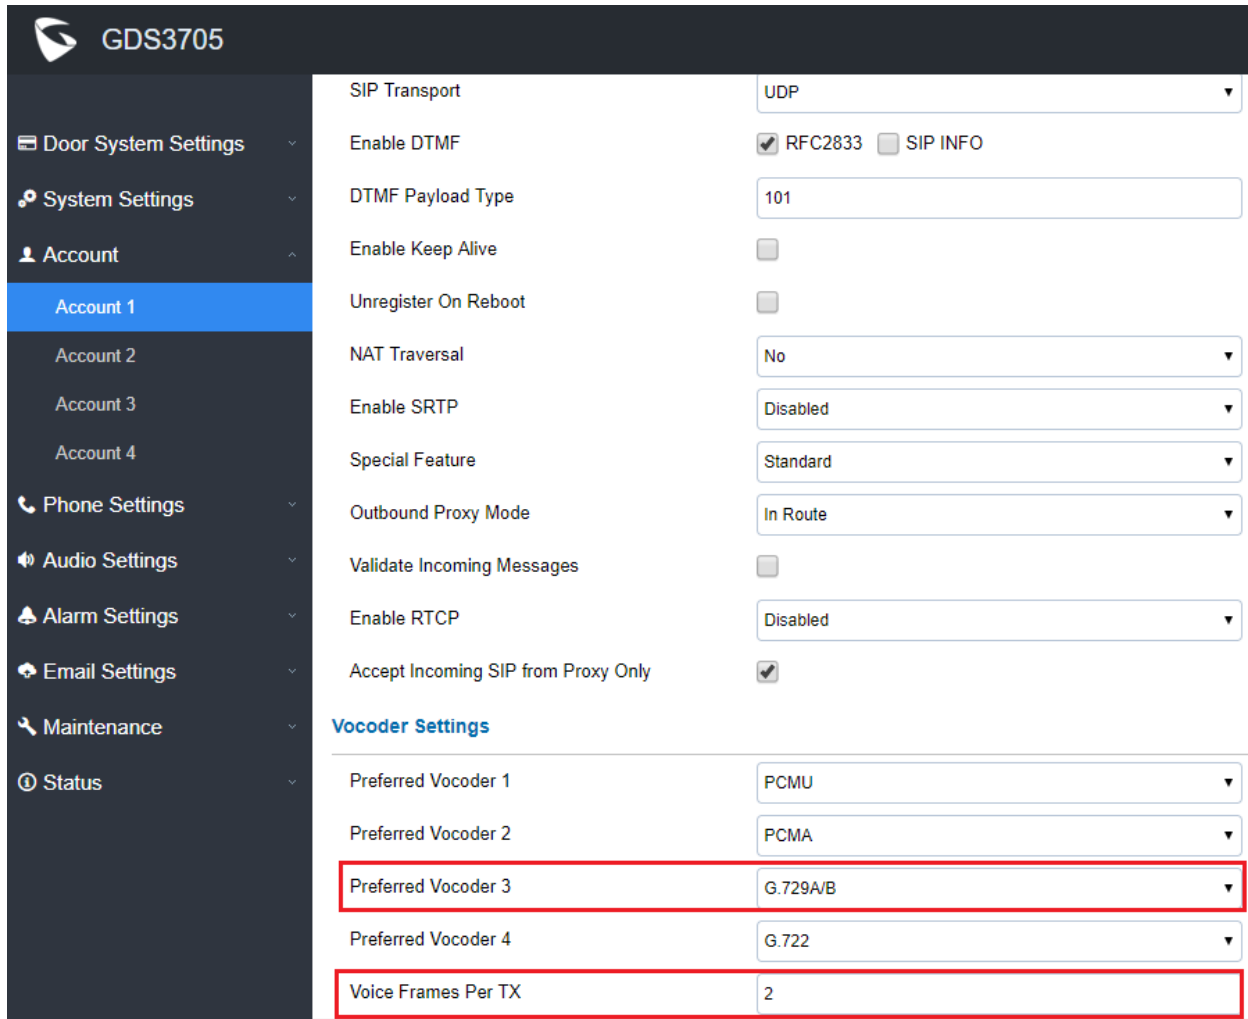

- **Functionality**

This is an enhancement for ITSP customers to support network backup service.

Multiple Audio Codecs and Voice Frame Per TX Support

- Web Configuration**

The option can be found under device webUI: Account → Account X (X = 1, 2, 3 and 4):

GDS3705	
Door System Settings	SIP Transport: UDP
System Settings	Enable DTMF: <input checked="" type="checkbox"/> RFC2833 <input type="checkbox"/> SIP INFO
Account	DTMF Payload Type: 101
Account 1	Enable Keep Alive: <input type="checkbox"/>
Account 2	Unregister On Reboot: <input type="checkbox"/>
Account 3	NAT Traversal: No
Account 4	Enable SRTP: Disabled
Phone Settings	Special Feature: Standard
Audio Settings	Outbound Proxy Mode: In Route
Alarm Settings	Validate Incoming Messages: <input type="checkbox"/>
Email Settings	Enable RTCP: Disabled
Maintenance	Accept Incoming SIP from Proxy Only: <input checked="" type="checkbox"/>
Status	Vocoder Settings
Preferred Vocoder 1	PCMU
Preferred Vocoder 2	PCMA
Preferred Vocoder 3	G.729AB
Preferred Vocoder 4	G.722
Voice Frames Per TX	2

- Functionality**

This is an enhancement for an existing features after feedbacks from customers and installers, especially ITSP customers.

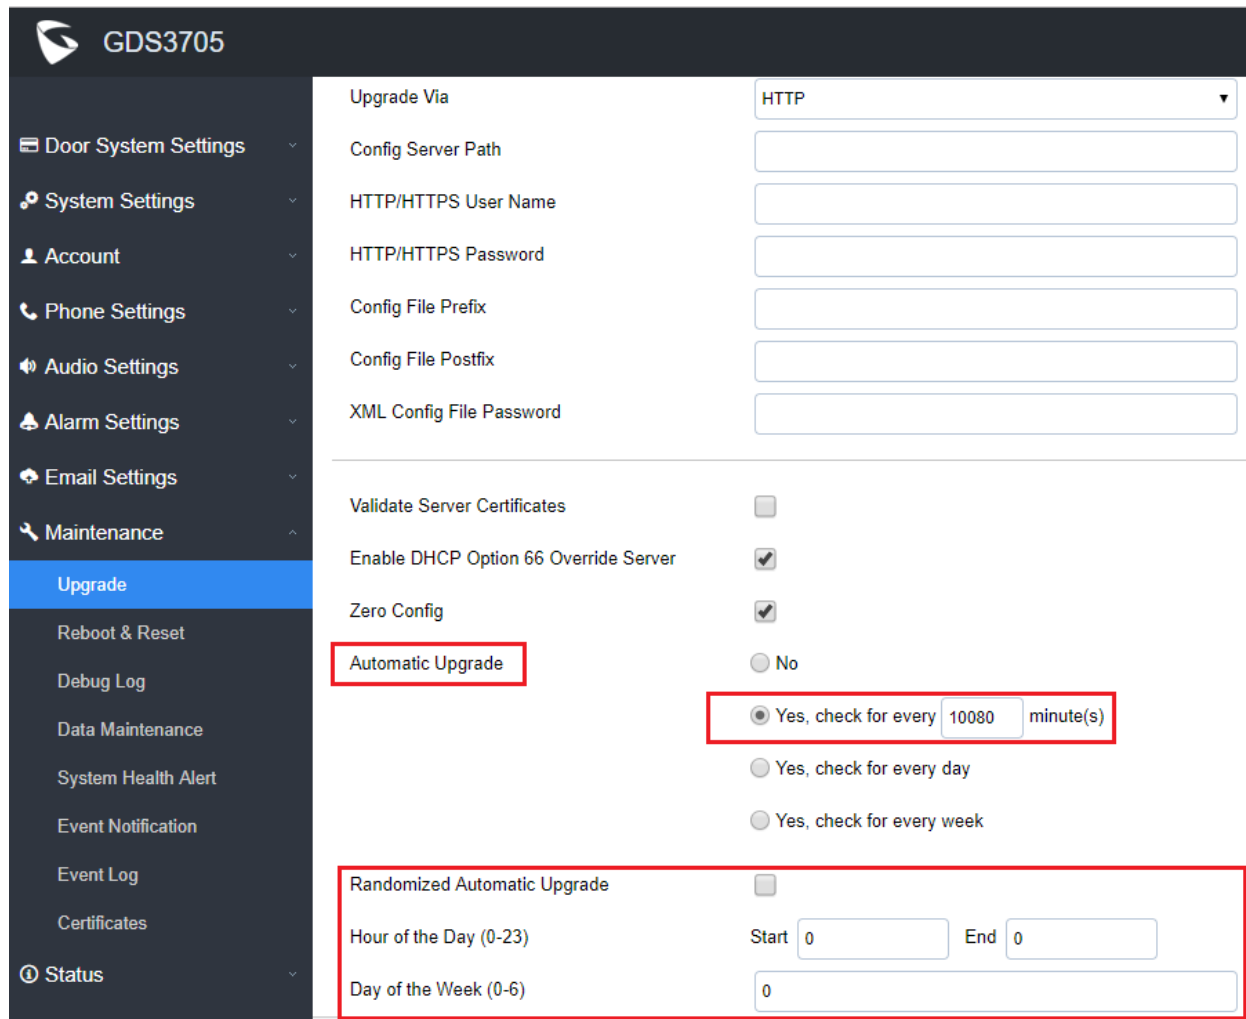

Added “Voice Frame Per TX” to allow ISTP customers configure the VoIP more efficiently.

Added G.729 audio codec support as well as multiple audio codecs simultaneously with specified priority.

Set Schedule for Upgrade/Provisioning

- Web Configuration**

The option can be found under device webUI: Maintenance → Upgrade:

GDS3705

Upgrade Via: HTTP

Config Server Path:

HTTP/HTTPS User Name:

HTTP/HTTPS Password:

Config File Prefix:

Config File Postfix:

XML Config File Password:

Validate Server Certificates: ☐

Enable DHCP Option 66 Override Server: ☒

Zero Config: ☒

Automatic Upgrade: ☐ No

☒ Yes, check for every minute(s)

☐ Yes, check for every day

☐ Yes, check for every week

Randomized Automatic Upgrade: ☐

Hour of the Day (0-23): Start End

Day of the Week (0-6):

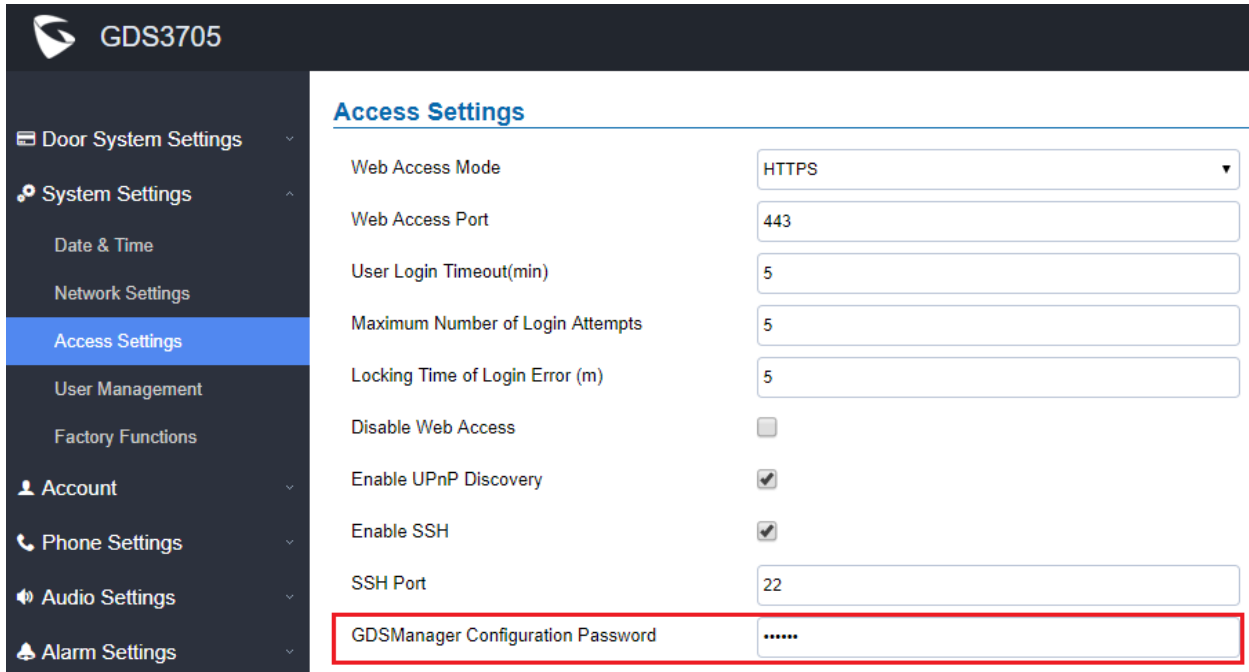

- Functionality**

This is an enhancement for ITSP customers so scheduled or preconfigured firmware upgrade or configuration provisioning can be provided to the customers.

Separate Credentials for GDSManager

- **Web Configuration**

This option can be found under device web UI → System Settings → Access Settings:

The screenshot shows the web UI for a GDS3705 device. The left sidebar contains a menu with the following items: Door System Settings, System Settings (expanded), Date & Time, Network Settings, Access Settings (highlighted), User Management, Factory Functions, Account, Phone Settings, Audio Settings, and Alarm Settings. The main content area is titled 'Access Settings' and contains the following configuration options:

Setting	Value
Web Access Mode	HTTPS
Web Access Port	443
User Login Timeout(min)	5
Maximum Number of Login Attempts	5
Locking Time of Login Error (m)	5
Disable Web Access	<input type="checkbox"/>
Enable UPnP Discovery	<input checked="" type="checkbox"/>
Enable SSH	<input checked="" type="checkbox"/>
SSH Port	22
GDSManager Configuration Password	*****

The 'GDSManager Configuration Password' field is highlighted with a red border.

- **Functionality**

This feature is implemented based on field customer feedback. Now separate credentials can be configured and used in GDSManager to communicate with GDS3705, instead of using GDS3705 webUI administrator's credentials. System administrators keep the admin password and use another password for GDSManager where usually operated by HR or other company staffs.

Make sure the correspondent password is configured in GDSManager like below:

NOTE:

- The password must match the password configured in the GDS3705 at above screenshot.
- This feature requires both GDS37xx and GDSManager to make it work.
- GDS37xx has to be configured in “Central Mode”
- GDSManager Version 1.0.1.1 or above is required to support this feature.

FIRMWARE VERSION 1.0.0.41

PRODUCT NAME

GDS3705 (*HW Supported: 1.1A, 1.2A, 1.3A, 1.4A, 1.4B*)

DATE

06/06/2019

SUMMARY OF UPDATE

This is a major feature update for GDS3705 as well as bug fixes. Two doors can be controlled starting from this version.

Factory Reset is recommended if upgrading from very old firmware, or experiencing abnormal webUI or missing parameters in the GUI. Please backup the configuration and data before factory reset, then import back after reset.

FIRMWARE APPLIES TO BELOW HW VERSION ONLY

HW Version	FW	Comments
GDS3705 HW1.1A	YES	
GDS3705 HW1.2A	YES	
GDS3705 HW1.3A	YES	
GDS3705 HW1.4A	YES	FW1.0.0.20 as Initial Version for this HW version
GDS3705 HW1.4B	YES	FW1.0.0.20 as Initial Version for this HW version

BUG FIX

- Fixed only the 1st doorbell number can answer the call normally in Door Bell Call Mode.
- Fixed cannot answer the call after uploading an empty custom doorbell ringtone.
- Fixed GDSManager cannot open door2 via the remote PIN.
- Fixed Digit Input will not open Door1 when disable ALMOUT1 open door feature.
- Fixed alarm not activated even wrong private PIN inputted many times.
- Fixed no error prompt when saving "Door2 Unlock Holding Times(s)" to "0".
- Fixed API cannot open Door2 remotely.
- Fixed cannot end the call by pressing doorbell button if the doorbell schedule not include current time
- Fixed Silent Alarm triggered the GDS3705 side has audio not muting on phone side.
- Fixed Digit Input 1 can only control open door1 when ALMOUT1 set as Open Door.
- Fixed wrong email theme used when testing alarm action.
- Fixed email failed to send out when non-schedule access alarm triggered.

- Fixed anyone knowing the DTMF PIN can open the door remotely if caller is GDS37xx, added the security limitation that only callees in the whitelist can open door remotely.
- Fixed if Hostage Alarm triggered the GDS3705 not sending audio but still sending alarm siren when far side phone pressed keypad to stop the siren.
- Fixed “Keep Door Open” by configured Schedule fail to work when Daylight Saving Time kicked in.
- Fixed pressing doorbell calling the 2nd callee in the list will not ring if the first number user rejected the open door request call (which supposedly should not happen like receptionist should not reject call)
- Fixed and forbidden user to upload custom doorbell ringtone with empty ring.bin audio.
- Fixed issue with decoding DNS (mDNS).
- Fixed Account Active not taking effect on Account1
- Fixed Event Log the SIP account number displayed incorrectly.
- Fixed no error prompt when saving SIP and RTP port with same number.
- Fixed clicking webUI to make doorbell call only the 1st number will be called.
- Fixed new uploaded certificate will not overwrite the previous certificate file.

ENHANCEMENT

- Synchronized Digit Input Status with GDS3710.
- Enhanced syslog messages and removed unnecessary details from the logs.
- Added sending System Health Alerts via email.
- Removed “SIP Proxy Compatibility Mode” as GDS3705 not support video.
- Added feature to Enable/Disable Web Access.
- Added feature option to configure “No Key Entry Timeout”
- Added feature to use Digits Only as Private PIN.
- Added option to set “schedule” for “Local PIN to Open Door”.
- Added ability to configure “Keep Door Open” action from “Device Config” of GDSManager (Version: 1.0.1.1) and synchronize with GDS37xx, or vice versa from GDS37xx to GDSManager.
- Added option to set DTMF Payload value.
- Added RTCP/TRCP-XR support.
- Added reuse ALMOUT1 for Open Door function and interface.
- Added Digit Output support Normal Open or Normal Close setting.
- Added “Boot Version” displayed in “System Info” of “Status” UI page.

KNOWN ISSUES

- Playing Prompt Audio from Proxy/UCM sometimes distorted.
- Dual Mic function is invalid.
- When doorbell volume set to 0 still hearing the ring back tone.
- Sending repeating registration packets to Server when receiving Terminate/Notify message.
- Silent Alarm to SIP phone still playing siren at phone side not stopping after pressing phone's keypad.

NEW FEATURES OVERVIEW

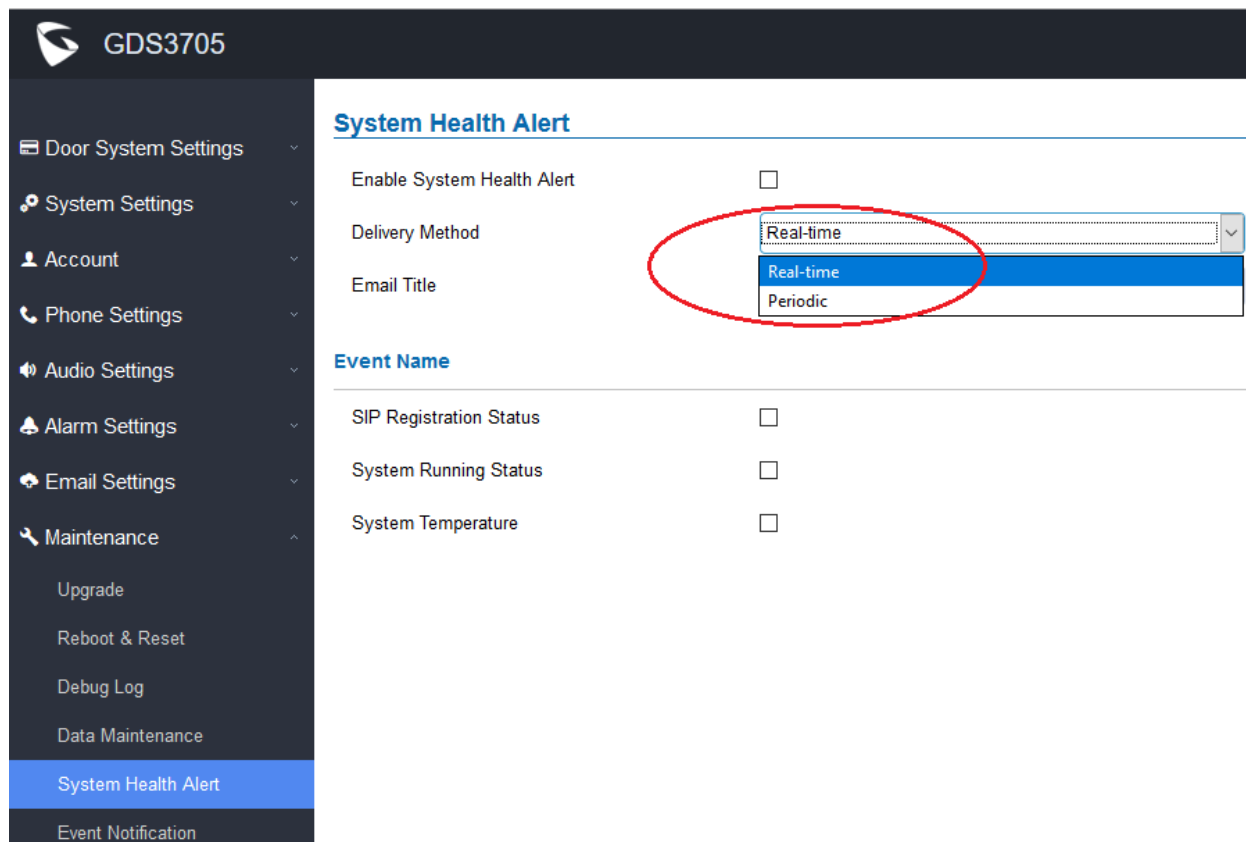

This section lists major new features and describes how to use them from the user's point of view.

SYSTEM HEALTH ALERT

- **Web Configuration**

New feature allows users to configure the device to send email report about system health information, like: Registration Status, Running Status, and Temperature. Email title can be written by users and also the sending frequency can be selected as either real-time or in period.

This option can be found under device web UI: Maintenance → System Health Alert:

- **Functionality**

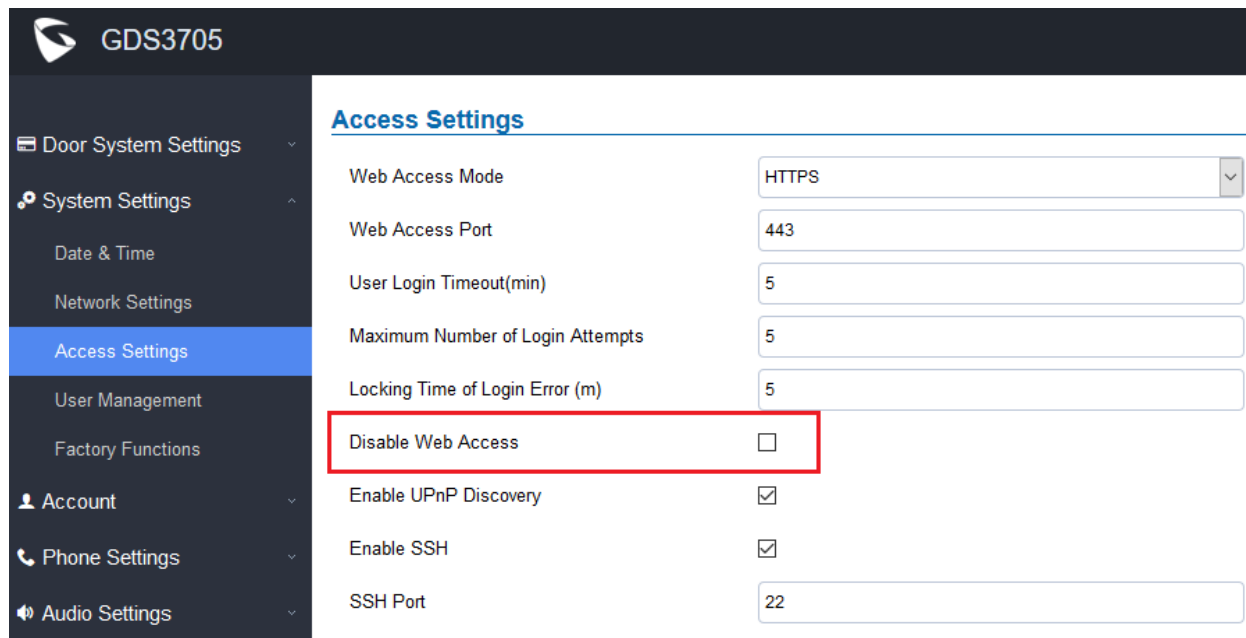

This feature is added to meet the requirement of ITSP customers. Service provider (ITSP) customers can configure the device to send out system health report to monitor the system health of the device to improve the service.

ENABLE/DISABLE WEB ACCESS

- Web Configuration**

This feature is added to allow service provider to disable web access to enhance the security of the device.

The option of this webUI can be found: System Settings → Access Settings:

The screenshot shows the webUI for a GDS3705 device. The left sidebar contains a menu with options: Door System Settings, System Settings (expanded), Date & Time, Network Settings, Access Settings (highlighted), User Management, Factory Functions, Account, Phone Settings, and Audio Settings. The main content area is titled 'Access Settings' and contains the following configuration items:

Setting	Value
Web Access Mode	HTTPS
Web Access Port	443
User Login Timeout(min)	5
Maximum Number of Login Attempts	5
Locking Time of Login Error (m)	5
Disable Web Access	<input type="checkbox"/>
Enable UPnP Discovery	<input checked="" type="checkbox"/>
Enable SSH	<input checked="" type="checkbox"/>
SSH Port	22

- Functionality**

This feature is added to allow service provider customer to disable webUI for end users and improve the security of the device. By default is enabled.

NOTE:

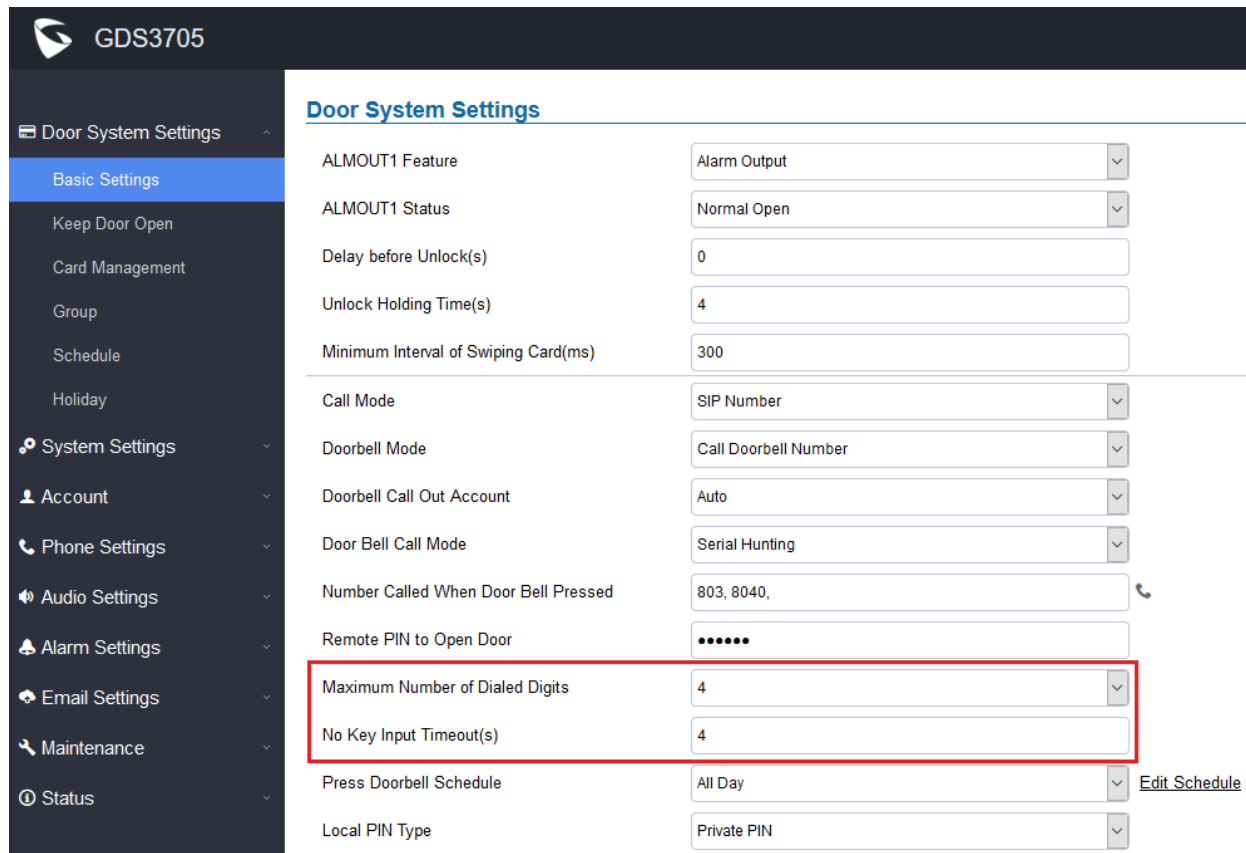

- This feature is designed for Service Provider, or Service Technician or Installers.
- End users without necessary knowledge are strongly discouraged to use it, avoiding lost access to the UI of the device.
- Once the webUI access is disabled, the UI can only be enabled again by either Provisioning, SSH (if enabled) or Factory Reset. This feature is NOT suggested to use by end users.
- If both Web Access and SSH are disabled, users will LOST access to the device. Only way to recover is re-provisioning the device, or HARD factory reset. Be very careful about disable BOTH, unless the device can be provisioned by configuration server.

NO KEY INPUT TIMEOUT

- **Web Configuration**

This feature is added to allow GDS3705 calling out automatically without pressing # key if stop input digits after the configured timer. This is more like IP Phone feature.

The option of this webUI can be found: Door System Settings → Basic Settings:

The screenshot shows the GDS3705 webUI interface. On the left is a sidebar menu with options: Door System Settings (expanded), Basic Settings (selected), Keep Door Open, Card Management, Group, Schedule, Holiday, System Settings, Account, Phone Settings, Audio Settings, Alarm Settings, Email Settings, Maintenance, and Status. The main content area is titled 'Door System Settings' and contains various configuration fields. A red rectangle highlights the 'Maximum Number of Dialed Digits' and 'No Key Input Timeout(s)' fields, both set to 4.

Door System Settings	
ALMOUT1 Feature	Alarm Output
ALMOUT1 Status	Normal Open
Delay before Unlock(s)	0
Unlock Holding Time(s)	4
Minimum Interval of Swiping Card(ms)	300
Call Mode	SIP Number
Doorbell Mode	Call Doorbell Number
Doorbell Call Out Account	Auto
Door Bell Call Mode	Serial Hunting
Number Called When Door Bell Pressed	803, 8040, 
Remote PIN to Open Door
Maximum Number of Dialed Digits	4
No Key Input Timeout(s)	4
Press Doorbell Schedule	All Day Edit Schedule
Local PIN Type	Private PIN

- **Functionality**

This is an enhancement for an existing features after feedbacks from customers.

This setting allows user to configure the timeout (in second) when no key input then sending out the SIP call automatically without press the “#” key. User can customize this parameter based on the environment this door phone installed.

For example in above screenshot:

“Maximum Number of Dialed Digits” is set to be “4”:

This is good for an installation allowing the door phone call ONLY the internal extensions to open door.

The setting is 4, means once user input 4 digit to the GDS3705, it will immediately dial out (saying the internal extension is using 4 digits)

“No Key Input Timeout(s)” is set to be “4” (second).

This means if user input the digits (less than 4 digit in above example), then wait and not more key strike, after 4 seconds (this can be customized by user or installer in the installation scene), the SIP call will automatically dial out without the “#” pressed.

Same as above screenshot example, if user input less than 4 digits, say input only 1 digit (“0” for example), then followed by the “#” key, then the GDS3705 door phone will immediately dial out “0” to establish the call. (“0” can be Operator or IVR depending on the IPPBX system configured)

This timer is in seconds, if no new digit input by user, the call will automatically be sending out and no “#” required to end the input.

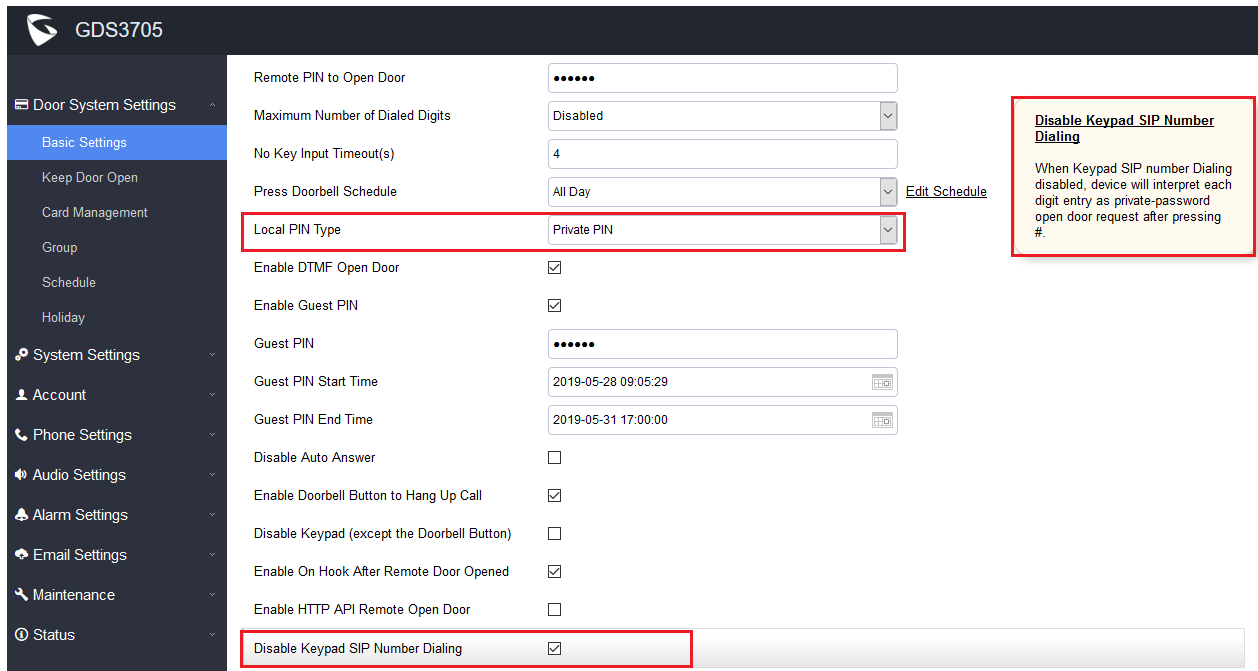

This is more a phone feature allowing users to simulate the traditional analogue phone dialing method.

Appropriate timer has to be configured to meet users’ calling habit.

OPEN DOOR VIA DIGITS ONLY PRIVATE PIN

- **Web Configuration**

Enable HTTP API Remote Open Door: ☐

Disable Keypad SIP Number Dialing: ☒

Disable Keypad SIP Number Dialing

When Keypad SIP number Dialing disabled, device will interpret each digit entry as private-password open door request after pressing #.

- **Functionality**

This is an enhancement for an existing features after feedbacks from customers and installers.

This setting allows user to use DIGIT ONLY private PIN to open door, with the cost of NOT be able to make any SIP calls (except for doorbell button call).

User just input “**PrivatePIN#**” to open door, more like traditional door access system. The PIN format is shorter and different with SIP call enabled mode (which PIN format is “**VirtualNumber*PrivatePIN#*”).

This makes the GDS3705 more like traditional access device.

NOTE:

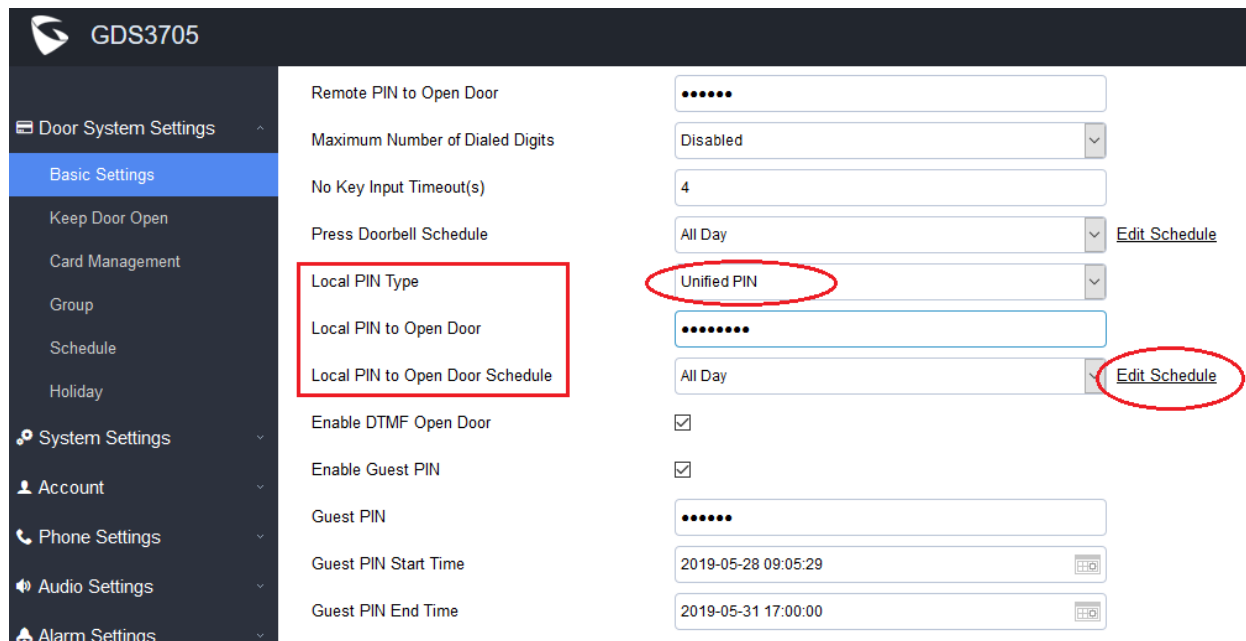

Following settings are required to make this feature working:

- “Disable Keypad SIP Number Calling” should be checked to enable this feature
- “Local PIN Type” should choose “Private PIN”
- Dial keypad to make SIP call will NOT work when above selected.
- PrivatePIN must be **UNIQUE** among users, otherwise the door will still open but log will NOT tell who opened the door due to duplicated PIN and whoever user last matched in the database with the PrivatePIN will be shown in the log.

SET SCHEDULE FOR LOCAL PIN OPEN DOOR

- **Web Configuration**

The option can be found under device webUI: Door System Settings → Access Settings:

The screenshot shows the GDS3705 web configuration interface. On the left is a sidebar menu with options: Door System Settings, Basic Settings, Keep Door Open, Card Management, Group, Schedule, Holiday, System Settings, Account, Phone Settings, Audio Settings, and Alarm Settings. The 'Door System Settings' section is expanded, showing 'Local PIN Type' (highlighted with a red box) and 'Local PIN to Open Door Schedule' (also highlighted with a red box). The 'Local PIN Type' dropdown is set to 'Unified PIN' (circled in red). Below it, the 'Local PIN to Open Door Schedule' is set to 'All Day' (circled in red), with an 'Edit Schedule' link next to it. Other settings visible include 'Remote PIN to Open Door' (masked with dots), 'Maximum Number of Dialed Digits' (Disabled), 'No Key Input Timeout(s)' (4), 'Press Doorbell Schedule' (All Day), 'Enable DTMF Open Door' (checked), 'Enable Guest PIN' (checked), 'Guest PIN' (masked with dots), 'Guest PIN Start Time' (2019-05-28 09:05:29), and 'Guest PIN End Time' (2019-05-31 17:00:00).

- **Functionality**

This is an enhancement for “Unified PIN” access feature after feedbacks from customers. Currently, using Private PIN or RFID card, user can configure schedule in the “Card Management” database to control the time door can be accessed. But there is no schedule in the “Unified PIN”.

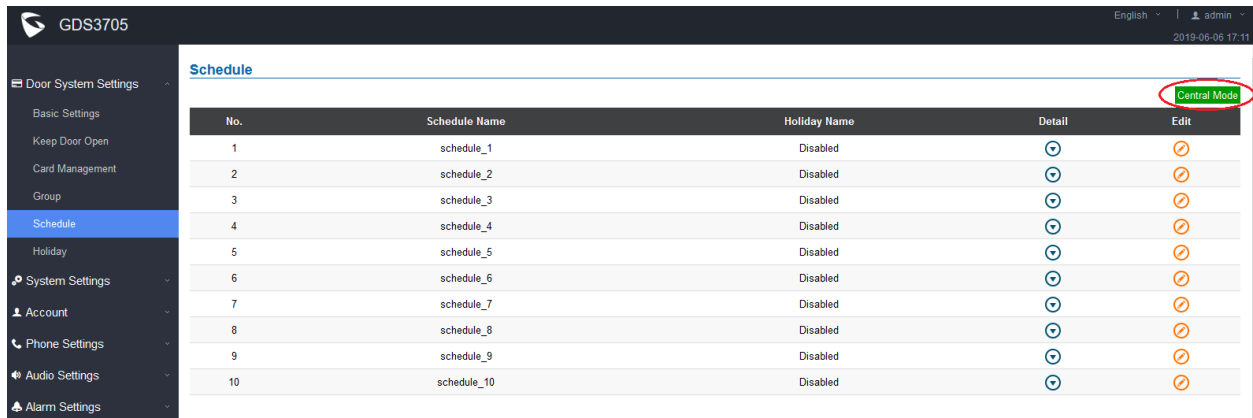

With this enhancement, users can now configure the “Schedule” to the “Unified PIN” so that the universal PIN also can be controlled by the Schedule, therefore door access can be controlled accordingly in the preconfigured time schedule.

The settings will appear only when “Unified PIN” selected in the “Local PIN Type”. User can click the “Edit Schedule” to get into schedule programming UI:

NOTE:

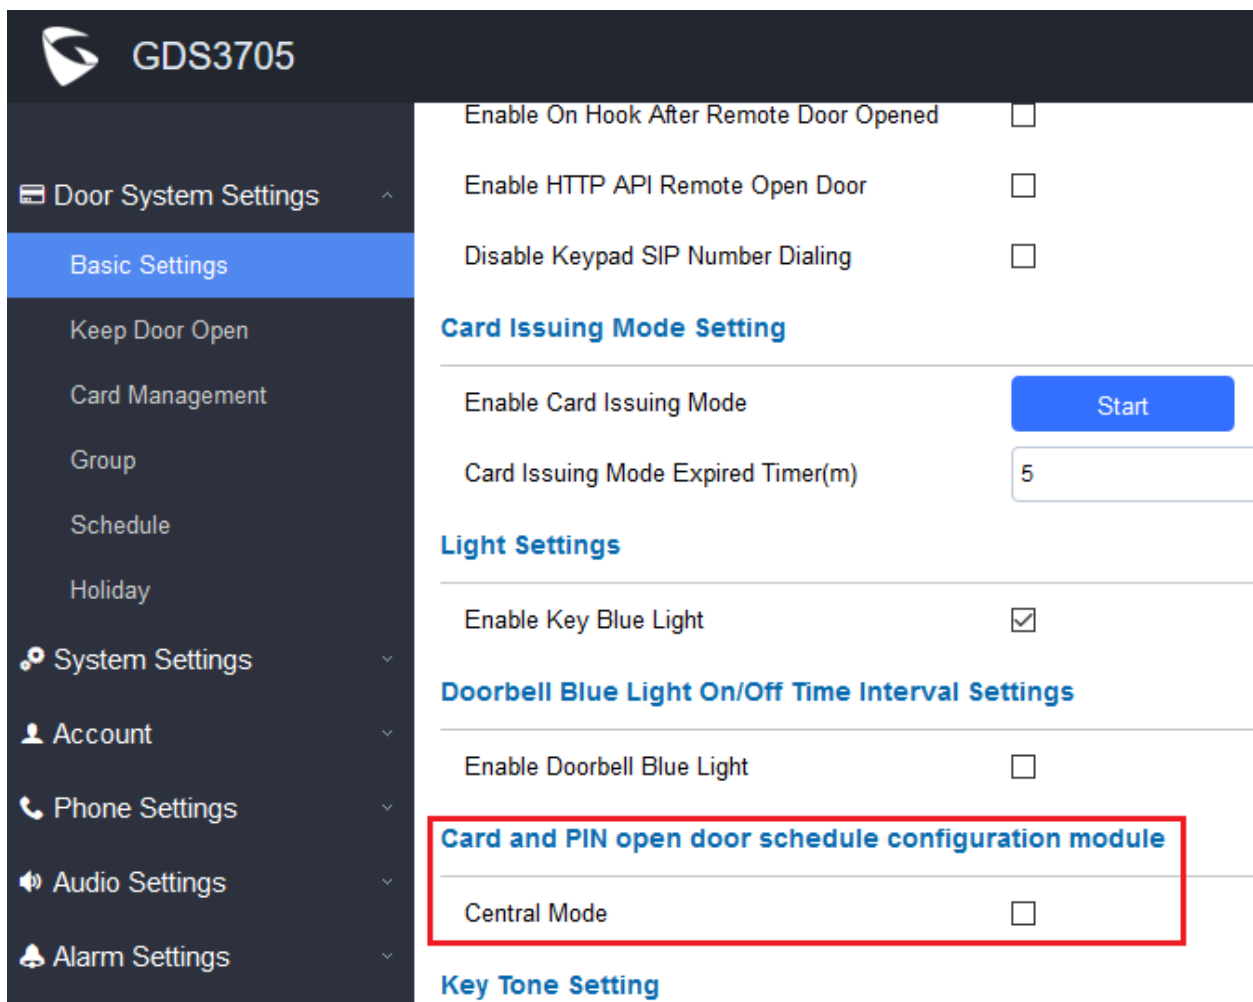

- The schedule can ONLY be edited when “Central Mode” disabled.
- If “Central Mode” enabled, the “Schedule” page is only viable and NOT editable. A green “Central Model” label will display in top right corner of the UI. (See below).
- When “Central Mode” enabled, the “Schedule” will be edited in GDSManager and synchronized by pulling from GDSManager down to GDS37xx device.

The “Schedule” UI page is only viewable and not editable with green label “Central Mode” displayed at top right corner:

No.	Schedule Name	Holiday Name	Detail	Edit
1	schedule_1	Disabled	⌵	⊗
2	schedule_2	Disabled	⌵	⊗
3	schedule_3	Disabled	⌵	⊗
4	schedule_4	Disabled	⌵	⊗

SYNCHRONIZE “KEEP DOOR OPEN” WITH GDSMANAGER

- **Web Configuration**

This feature is added to allow service provider to synchronize the schedule open door from GDSManager running at central office. GDSManager (Ver: 1.0.1.1 or later) required to work with this feature.

The webUI of GDS3701 can be found at: Door System Settings → Keep Door Open:

GDS3705

The webUI of GDSManager can be found at: Realtime Video → GDS: select related GDS37xx device and right click the selected GDS → Device Config:

• Functionality

This feature is added to allow service provider or system administrator or installer to synchronize the schedule open door from GDSManager running at Window based computer from central office. GDSManager (Ver: 1.0.1.1 or later) required to work with this feature.

NOTE:

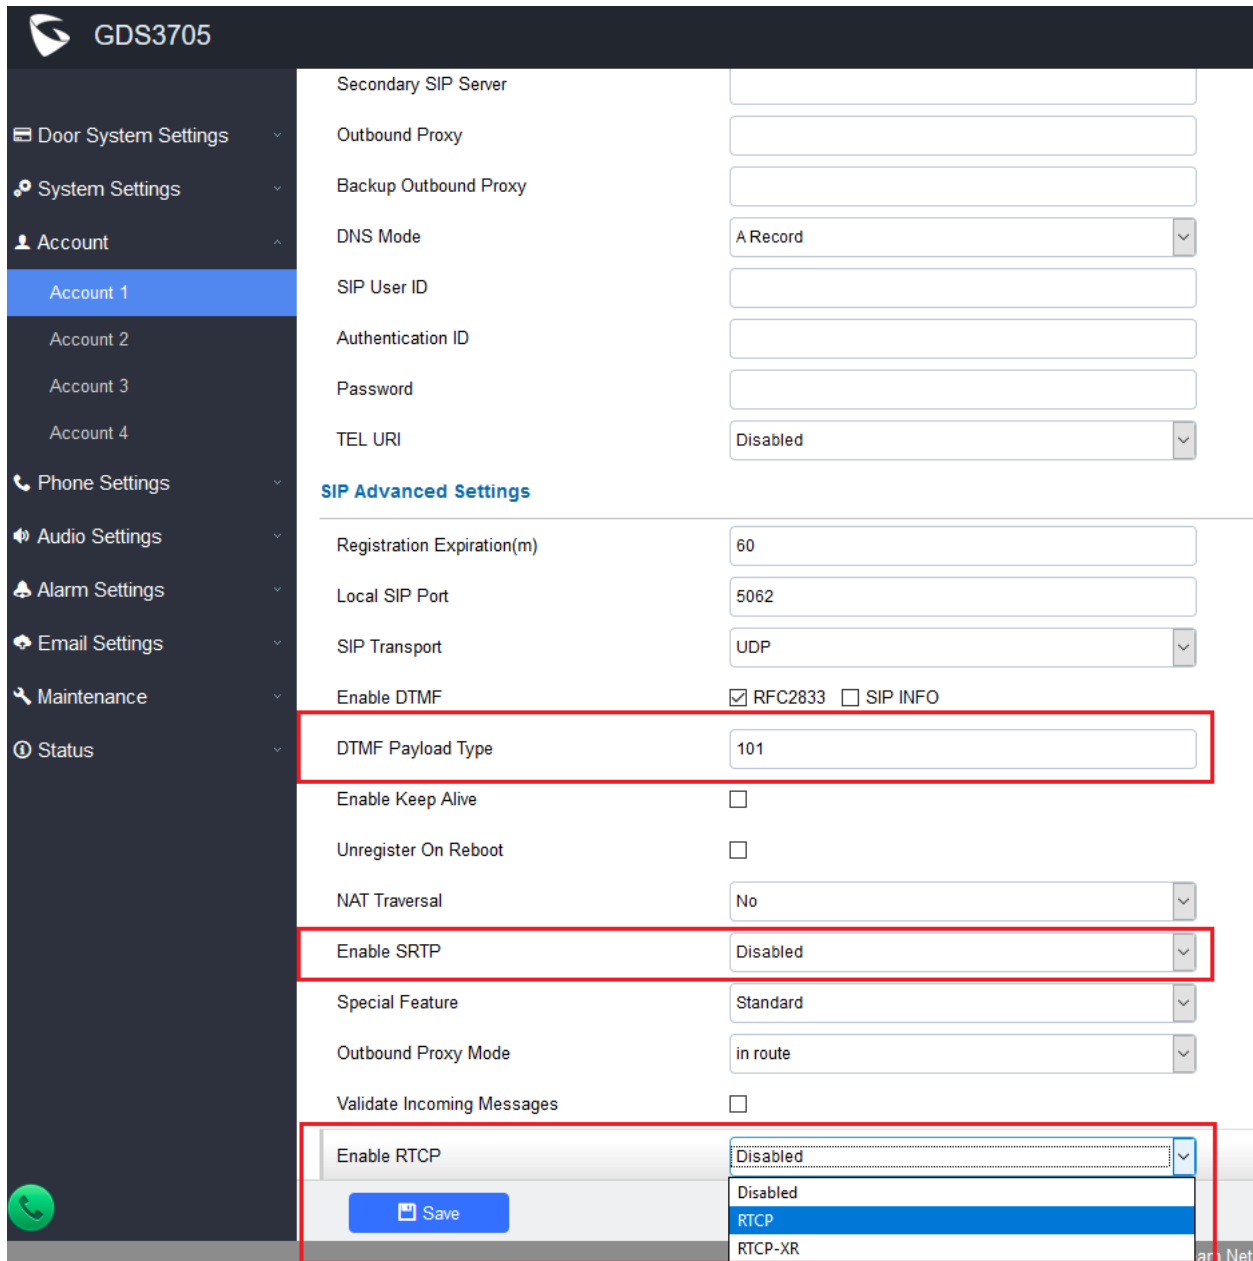

- This feature requires both GDS37xx and GDSManager to make it work.
- GDS37xx has to be configured in “Central Mode”
- GDSManager Version 1.0.1.1 or above is required to support this feature.

- **Functionality**

These parameters are designed for more compatibility with 3rd parties SIP Proxy or IPPBX and good for ITSP service providers as well as System Integrators. The parameters can be adjusted by just fill in the corrected value or choose in pull-down menu selections.

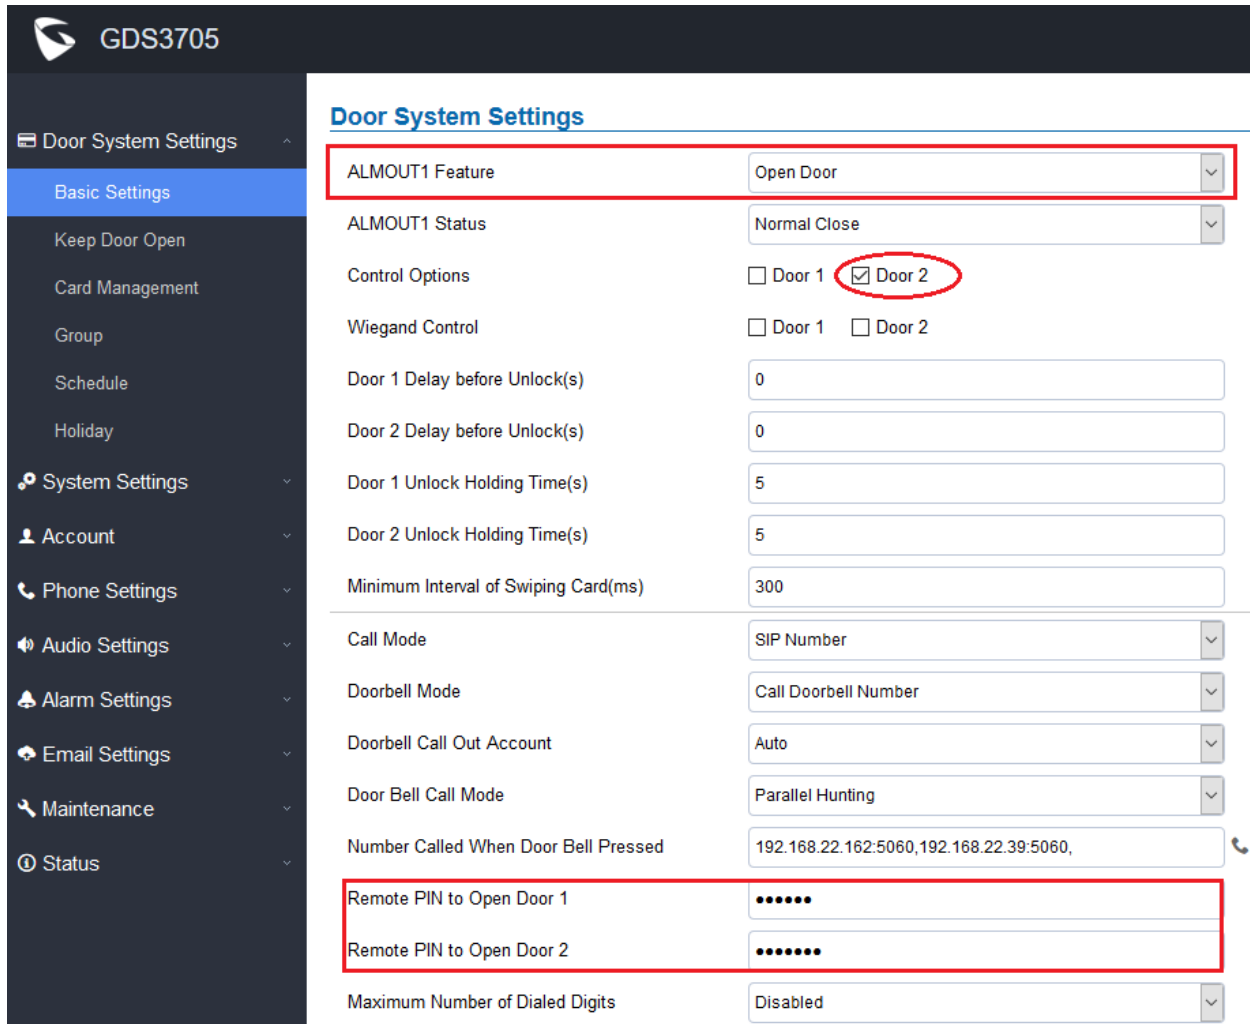

NOTE:

- Make sure correct value are filled in. Otherwise DTMF open door will fail, there will be no audio and sometimes the call will just fail to establish.
- If do not know the meaning or unsure the value adjusted, please use the default value.
- This feature is designed for Service Provider, or Service Technician or Installers.
- End users without necessary knowledge are strongly discouraged to change the parameters, avoiding the device not establish calls or not working properly.

ALMOUT1 CONTROL DOOR2

- **Web Configuration**

This feature is added to reuse ALMOUT1 port for DOOR2 Control. The option of this webUI can be found: Door System Settings → Basic Settings:

Door System Settings	
ALMOUT1 Feature	Open Door
ALMOUT1 Status	Normal Close
Control Options	<input type="checkbox"/> Door 1 <input checked="" type="checkbox"/> Door 2
Wiegand Control	<input type="checkbox"/> Door 1 <input type="checkbox"/> Door 2
Door 1 Delay before Unlock(s)	0
Door 2 Delay before Unlock(s)	0
Door 1 Unlock Holding Time(s)	5
Door 2 Unlock Holding Time(s)	5
Minimum Interval of Swiping Card(ms)	300
Call Mode	SIP Number
Doorbell Mode	Call Doorbell Number
Doorbell Call Out Account	Auto
Door Bell Call Mode	Parallel Hunting
Number Called When Door Bell Pressed	192.168.22.162:5060,192.168.22.39:5060
Remote PIN to Open Door 1
Remote PIN to Open Door 2
Maximum Number of Dialed Digits	Disabled

- **Functionality**

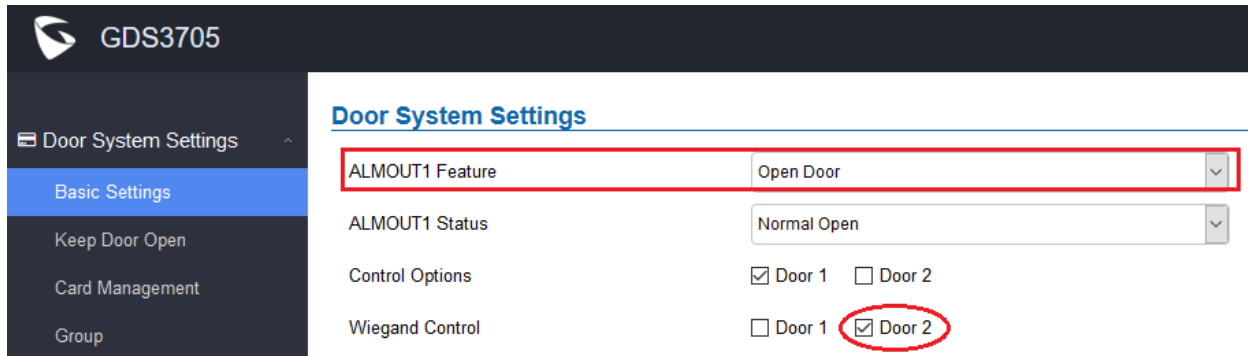

This is a major feature enhancement, by re-use ALMOUT1 (COM1) interface to be either as per original design as normal alarm out with 3rd party device, or control DOOR2 operation (the two functions are mutual-exclusive).

Customers can now use this ALMOUT1 (COM1) interface to control DOOR2, in addition to the existing Locker/COM2 interface (controlling DOOR1). This feature when selected, will enable GDS3705 to control the operation of TWO DOORS via RFID, local and remote PINs.

For example, a 3rd party Wiegand Input device can be installed at DOOR2 with related cable wired into the GDS3705 installed at DOOR1. Now the DOOR1 and DOOR2 can be configured to be opened by programmed RFID cards, related PINs either separately or both.

NOTE:

- **Interface for Door Control (Which Door can be OPEN):**

GDS3705

Door System Settings

ALMOUT1 Feature: Open Door

ALMOUT1 Status: Normal Open

Control Options: ☒ Door 1 ☐ Door 2

Wiegand Control: ☐ Door 1 ☒ Door 2

If ALMOUT1 (COM1) interface is set to control DOOR2 opening, “Lock Status” can be configured by choose “Normal Open” or “Normal Close” based on the strike used.

Unlike default COM2 which is designed for strike control and having three connecting sockets, the ALMOUT1 (COM1) only has two connecting sockets. Therefore correct lock mode has to be configured to make the strike working as expected.

For above example, the GDS3705 is configured to control DOOR1 (wiring to COM2 interface); the 3rd party Wiegand Input is set to control DOOR2 (wiring to COM1 interface).

- **Universal PIN for Operation of Doors:**

GDS3705

<div style="background-color: #2c3e50; color: white; padding: 2px 5px;">Door System Settings ^</div> <div style="background-color: #007bff; color: white; padding: 2px 5px;">Basic Settings</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px;">Keep Door Open</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px;">Card Management</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px;">Group</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px;">Schedule</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px;">Holiday</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px;">System Settings v</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px;">Account v</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px;">Phone Settings v</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px;">Audio Settings v</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px;">Alarm Settings v</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px;">Email Settings v</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px;">Maintenance v</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px;">Status v</div>	<div>Minimum Interval of Swiping Card(ms) <input style="width: 150px;" type="text" value="300"/></div> <hr/> <div>Call Mode <input style="width: 150px;" type="text" value="SIP Number"/></div> <div>Doorbell Mode <input style="width: 150px;" type="text" value="Call Doorbell Number"/></div> <div>Doorbell Call Out Account <input style="width: 150px;" type="text" value="Auto"/></div> <div>Door Bell Call Mode <input style="width: 150px;" type="text" value="Parallel Hunting"/></div> <div>Number Called When Door Bell Pressed <input style="width: 150px;" type="text" value="192.168.22.162:5060,192.168.22.39:5060,"/></div> <div>Remote PIN to Open Door 1 <input style="width: 150px;" type="text" value="....."/></div> <div>Remote PIN to Open Door 2 <input style="width: 150px;" type="text" value=""/></div> <div>Maximum Number of Dialed Digits <input style="width: 150px;" type="text" value="Disabled"/></div> <div>No Key Input Timeout(s) <input style="width: 150px;" type="text" value="4"/></div> <div>Press Doorbell Schedule <input style="width: 150px;" type="text" value="All Day"/> Edit Schedule</div> <div style="border: 2px solid red; padding: 5px;"> <div>Local PIN Type <input style="width: 150px;" type="text" value="Unified PIN"/></div> <div>Unified PIN Open Door Options <input checked="" type="checkbox"/> Door 1 <input checked="" type="checkbox"/> Door 2</div> <div>Local PIN to Open Door <input style="width: 150px;" type="text" value="....."/></div> <div>Local PIN to Open Door Schedule <input style="width: 150px;" type="text" value="All Day"/> Edit Schedule</div> </div> <div>Enable DTMF Open Door <input checked="" type="checkbox"/></div>
--	--

If Unified PIN (Universal PIN) is configured to open door, then which door can be controlled by the PIN is configured in the UI once “Unified PIN” selected.

For example, like above screenshot, if this universal PIN is set to open both DOO1 and DOOR2, but due to previous “Control Option” set to open Door1, and “Wiegand Control” set to open Door2, therefore the final result will be the **INTERSECT** result of both sets with condition qualified.

In above case, The PIN will only work at GDS3705 (DOOR1) and Wiegand Device (DOOR2) local input respectively. Meaning input PIN at GDS3705 will only open DOOR1 and will NOT open DOOR2.

- **Remote PIN to Operation of Doors:**

GDS3705

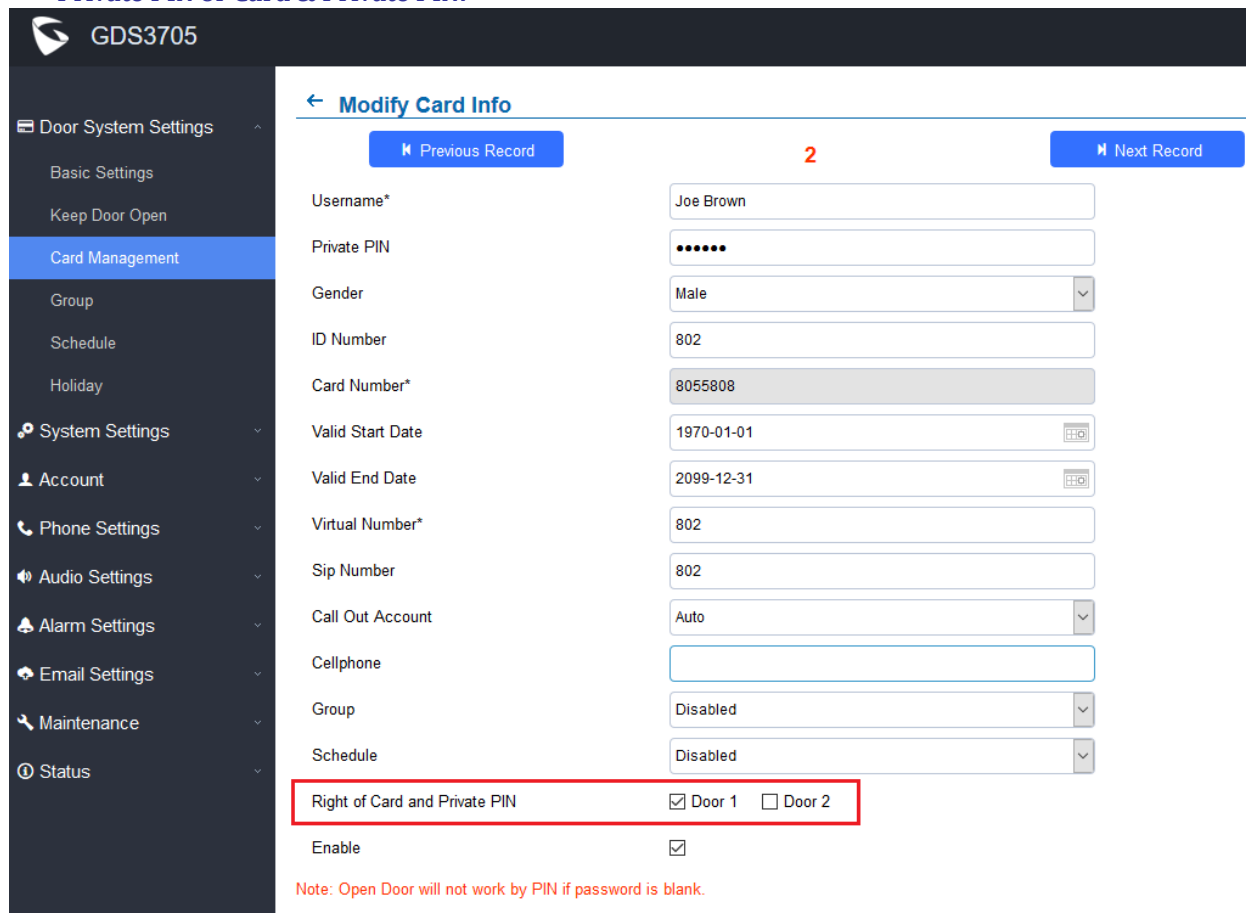

<div style="background-color: #2c3e50; color: white; padding: 2px 5px; margin-bottom: 5px;">Door System Settings</div> <div style="background-color: #007bff; color: white; padding: 2px 5px; margin-bottom: 5px;">Basic Settings</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px; margin-bottom: 5px;">Keep Door Open</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px; margin-bottom: 5px;">Card Management</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px; margin-bottom: 5px;">Group</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px; margin-bottom: 5px;">Schedule</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px; margin-bottom: 5px;">Holiday</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px; margin-bottom: 5px;">System Settings</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px; margin-bottom: 5px;">Account</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px; margin-bottom: 5px;">Phone Settings</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px; margin-bottom: 5px;">Audio Settings</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px; margin-bottom: 5px;">Alarm Settings</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px; margin-bottom: 5px;">Email Settings</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px; margin-bottom: 5px;">Maintenance</div> <div style="background-color: #2c3e50; color: white; padding: 2px 5px;">Status</div>	<div>Minimum Interval of Swiping Card(ms) <input style="width: 150px;" type="text" value="300"/></div> <hr/> <div>Call Mode <div style="border: 1px solid #ccc; padding: 2px 5px; display: inline-block;">SIP Number</div></div> <div>Doorbell Mode <div style="border: 1px solid #ccc; padding: 2px 5px; display: inline-block;">Call Doorbell Number</div></div> <div>Doorbell Call Out Account <div style="border: 1px solid #ccc; padding: 2px 5px; display: inline-block;">Auto</div></div> <div>Door Bell Call Mode <div style="border: 1px solid #ccc; padding: 2px 5px; display: inline-block;">Parallel Hunting</div></div> <div>Number Called When Door Bell Pressed <div style="border: 1px solid #ccc; padding: 2px 5px; display: inline-block;">192.168.22.162:5060,192.168.22.39:5060,</div></div> <div style="border: 2px solid red; padding: 2px;"> Remote PIN to Open Door 1 <div style="border: 1px solid #ccc; padding: 2px 5px; display: inline-block;">••••••</div> </div> <div style="border: 2px solid red; padding: 2px;"> Remote PIN to Open Door 2 <div style="border: 1px solid #ccc; padding: 2px 5px; display: inline-block;">••••••</div> </div> <div>Maximum Number of Dialed Digits <div style="border: 1px solid #ccc; padding: 2px 5px; display: inline-block;">Disabled</div></div> <div>No Key Input Timeout(s) <div style="border: 1px solid #ccc; padding: 2px 5px; display: inline-block;">4</div></div> <div>Press Doorbell Schedule <div style="border: 1px solid #ccc; padding: 2px 5px; display: inline-block;">All Day</div> Edit Schedule</div> <div>Local PIN Type <div style="border: 1px solid #ccc; padding: 2px 5px; display: inline-block;">Unified PIN</div></div> <div>Unified PIN Open Door Options <div style="display: inline-block; margin-right: 10px;"><input checked="" type="checkbox"/> Door 1</div> <div style="display: inline-block;"><input type="checkbox"/> Door 2</div></div> <div>Local PIN to Open Door <div style="border: 1px solid #ccc; padding: 2px 5px; display: inline-block;">••••••</div></div> <div>Local PIN to Open Door Schedule <div style="border: 1px solid #ccc; padding: 2px 5px; display: inline-block;">All Day</div> Edit Schedule</div> <div style="border: 2px solid red; padding: 2px;"> Enable DTMF Open Door <div style="display: inline-block; width: 20px; height: 15px; border: 1px solid #ccc; background-color: white; text-align: center; line-height: 15px;">✓</div> </div> <div>Enable Guest PIN <div style="display: inline-block; width: 20px; height: 15px; border: 1px solid #ccc; background-color: white;"></div></div> <div>Disable Auto Answer <div style="display: inline-block; width: 20px; height: 15px; border: 1px solid #ccc; background-color: white;"></div></div>
--	--

For remote PIN to open door, the PIN can be configured in above setting.

The PIN can be different for DOOR1 and DOOR2 and has to be configured correctly in related IP Phone which will be used to operate “One Key Open Door”.

If BOTH doors need to be opened at the same time, then both DOOR1 and DOOR2 has to be configured with exactly SAME password or PIN as DTMP open door.

FIRMWARE VERSION 1.0.0.37

PRODUCT NAME

GDS3705 (*HW Supported: 1.1A, 1.2A, 1.3A, 1.4A, 1.4B*)

DATE

12/20/2018

SUMMARY OF UPDATE

The main purpose of this release is bug fix and feature enhancement

FIRMWARE APPLIES TO BELOW HW VERSION ONLY

HW Version	FW	Comments
GDS3705 HW1.1A	YES	
GDS3705 HW1.2A	YES	
GDS3705 HW1.3A	YES	
GDS3705 HW1.4A	YES	FW1.0.0.20 as Initial Version for this HW version
GDS3705 HW1.4B	YES	FW1.0.0.20 as Initial Version for this HW version

BUG FIX

- Fixed reboot loop due to specific P-values.
- Fixed issue with ANATEL Certificate.

ENHANCEMENT

- Added ability to configure device with custom certificate signed by custom CA certificate
- Added event log showing users opening door via private PIN
- Added SIP NOTIFY to factory reset
- Added option to disable outbound proxy route header for both GDS3705/GDS3710
- Added CONFIG for firmware and configure server path and type via SSH.
- Added PING function in the CLI interface SSH.

KNOWN ISSUES

- Playing Prompt Audio from Proxy/UCM sometimes distorted.
- Dual Mic function is invalid.
- When doorbell volume set to 0 still hearing the ring back tone.
- Sending repeating registration packets to Server when receiving Terminate/Notify message.
- Silent Alarm to SIP phone still playing siren at phone side after pressing keypad at phone side

NEW FEATURES OVERVIEW

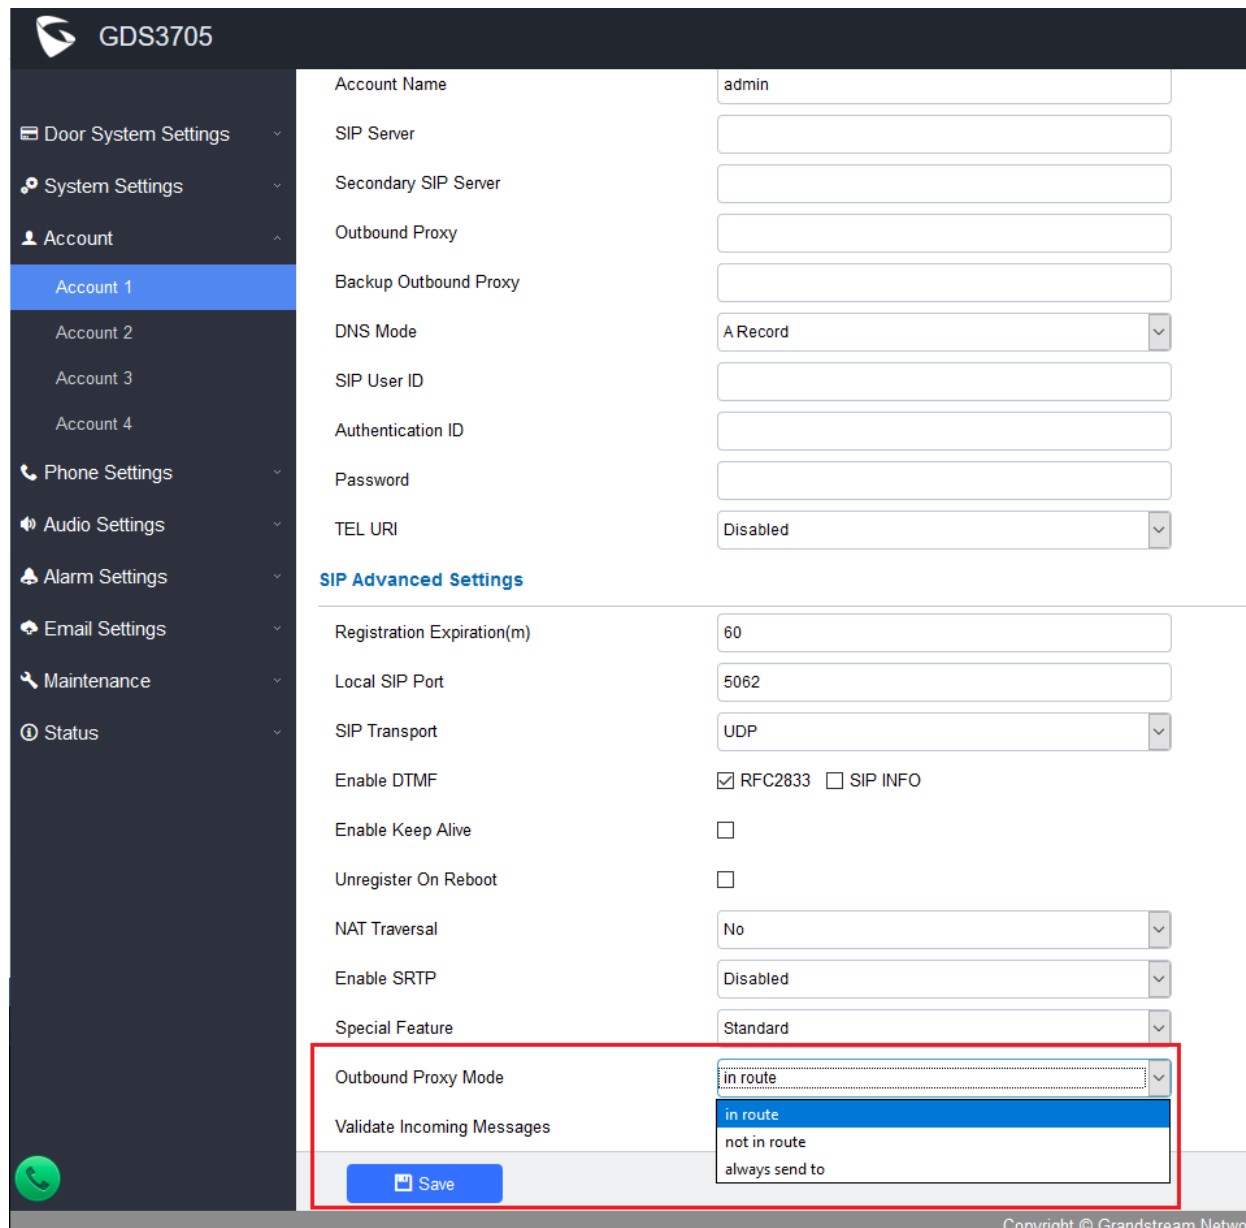

This section lists major new features and describes how to use them from the user's point of view.

OPTION OF OUTBOUND PROXY MODE

- **Web Configuration**

New feature added to allow users to configure the outbound proxy mode, as well as “Validate Incoming Message”. This feature is very useful for ITSP service provider.

This option can be found under device web UI: Account X → SIP Advanced Settings:

GDS3705

- Door System Settings
- System Settings
- Account
 - Account 1**
 - Account 2

Copyright © Grandstream Network

- **Functionality**

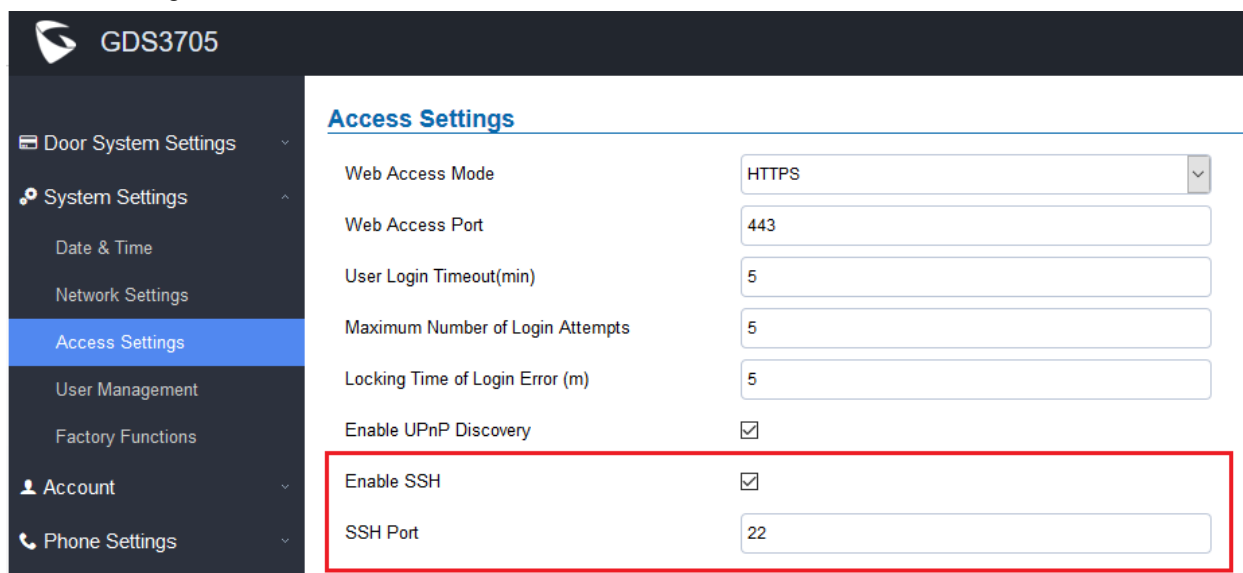

This feature is added to meet the requirement of ITSP customers. Service provider (ITSP) customers can make choosing different Outbound Proxy Mode for their customers to use the service based on different network environment.

CONFIG FIRMWARE OR CONFIGURATION SERVER PATH AND ICMP TEST VIA SSH

- **Web Configuration**

This feature is added to allow user to change firmware server path or configuration server path via SSH. This is very useful for ITSP or service contractors or installer to maintenance the device, for example, the webUI is purposed blocked, ITSP or Service Technician can use scripts in SSH to perform necessary configuration or maintenance, or upgrade firmware.

The SSH has to be enabled to use this feature. The option of this webUI can be found: System Settings → Access Settings:

The screenshot shows the 'GDS3705' web interface. On the left is a sidebar menu with options: Door System Settings, System Settings (expanded), Date & Time, Network Settings, Access Settings (highlighted), User Management, Factory Functions, Account, and Phone Settings. The main content area is titled 'Access Settings' and contains the following configuration items:

Setting	Value
Web Access Mode	HTTPS
Web Access Port	443
User Login Timeout(min)	5
Maximum Number of Login Attempts	5
Locking Time of Login Error (m)	5
Enable UPnP Discovery	<input checked="" type="checkbox"/>
Enable SSH	<input checked="" type="checkbox"/>
SSH Port	22

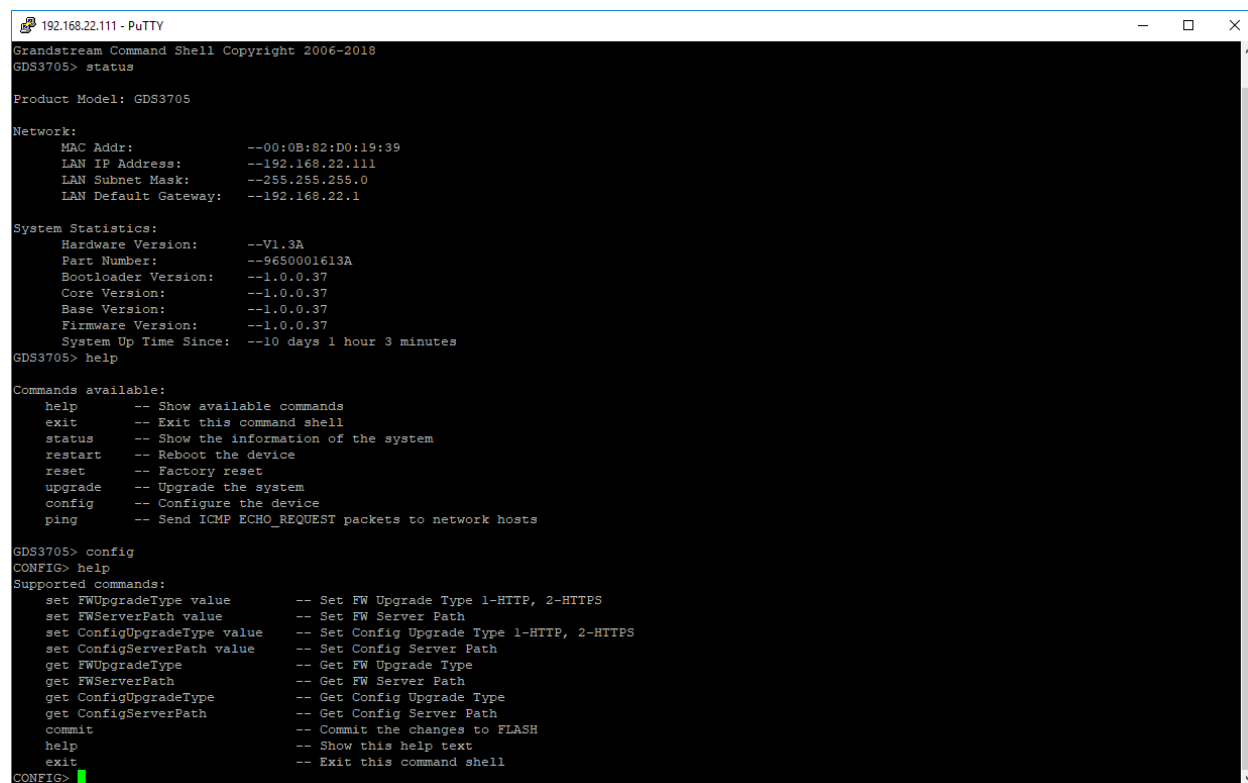

The 'Enable SSH' checkbox and the 'SSH Port' field are highlighted with a red rectangular box.

- **Functionality**

This feature is added to allow users (service technician, installer, etc.) to configure or change the firmware server or configuration server path via SSH, enhance the security of SIP accounts configured in GDS3705.

3rd party SSH application like PuTTY is required to use this feature.

For example, below is the screenshot of such CLI interface:

```
192.168.22.111 - PuTTY
Grandstream Command Shell Copyright 2006-2018

NOTE:

- This feature is designed for ITSP Service Provider, or Service Technician or Installers.
- End users without necessary knowledge are strongly discouraged to access it, avoiding damage the device or making the device not working properly.

FIRMWARE VERSION 1.0.0.36

PRODUCT NAME

GDS3705 (*HW Supported: 1.1A, 1.2A, 1.3A, 1.4A, 1.4B*)

DATE

11/06/2018

SUMMARY OF UPDATE

The main purpose of this release is bug fix and feature enhancement

FIRMWARE APPLIES TO BELOW HW VERSION ONLY

HW Version	FW	Comments
GDS3705 HW1.1A	YES	
GDS3705 HW1.2A	YES	
GDS3705 HW1.3A	YES	
GDS3705 HW1.4A	YES	FW1.0.0.20 as Initial Version for this HW version
GDS3705 HW1.4B	YES	FW1.0.0.20 as Initial Version for this HW version

BUG FIX

- Fixed factory reset and configuration without another reboot the Wiegand port will not open door.
- Fixed data import in CSV format is not complete.
- Fixed confirmation tone not played when using SIP phone remote open door.
- Fixed parallel hunting preview mode the one key open door feature failed.
- Fixed cannot set strong admin password with special characters included.
- Fixed security vulnerability to compromise root access via SSH.

ENHANCEMENT

- Added ability to configure device with custom certificate signed by custom CA certificate
- Added SIP password hided and not visible in the WebUI
- Extended VLAN range from 0 ~ 55 to 0 ~ 4094
- Added option to display device temperature in Fahrenheit.
- Added support for special character "@" in the SIP User ID.

KNOWN ISSUES

- Playing Prompt Audio from Proxy/UCM sometimes distorted.
- Dual Mic function is invalid.
- When doorbell volume set to 0 still hearing the ring back tone.
- Sending repeating registration packets to Server when receiving Terminate/Notify message.
- Silent Alarm to SIP phone still playing siren at phone side after pressing keypad at phone side

NEW FEATURES OVERVIEW

This section lists major new features and describes how to use them from the user's point of view.

CUSTOM CERTIFICATE

- **Web Configuration**

New feature added to allow users to configure the device with custom certificate signed by custom CA certificate. This option can be found under device web UI: Maintenance → Certificates like below:

GDS3705

Certificates

Trusted CA Certificates

No.	Issued By	Expiration	Upload	Delete
1			Upload	Delete
2			Upload	Delete
3			Upload	Delete
4			Upload	Delete
5			Upload	Delete
6			Upload	Delete

Custom Certificate

No.	Issued By	Expiration	Upload	Delete
1			Upload	Delete

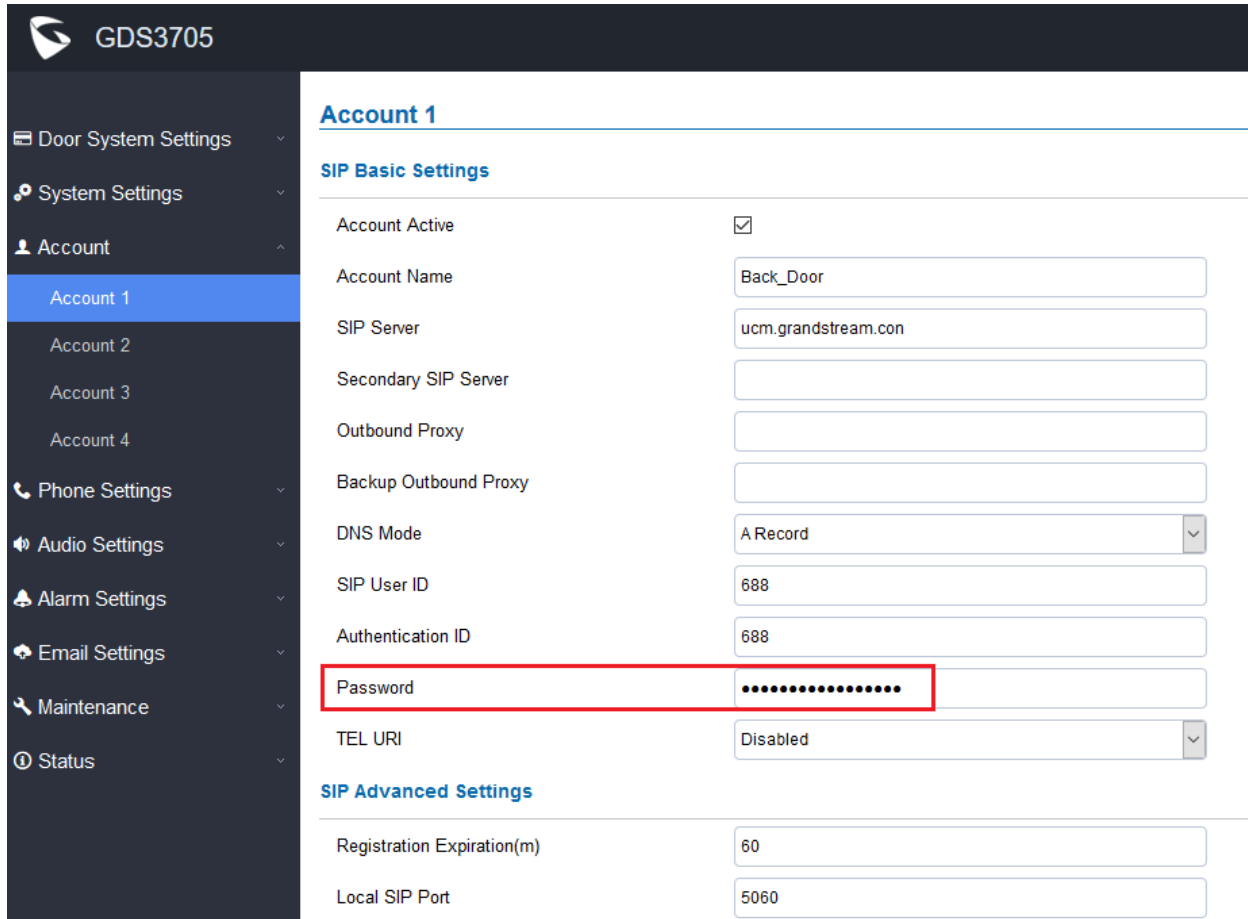

- **Functionality**

This feature is added to meet the requirement of ITSP customers. Service provider (ITSP) customers can make their own CA certificate and uploaded to the GDS device and provide service to their customers.

INVISIBLE SIP PASSWORD

- **Web Configuration**

This feature is added to enhance the security of SIP accounts configured in GDS3705. This can be found under device web UI: Account → Account X (where X: 1 ~ 4)

GDS3705

- Door System Settings
- System Settings
- Account
 - Account 1**
 - Account 2
 - Account 3
 - Account 4
- Phone Settings
- Audio Settings
- Alarm Settings
- Email Settings
- Maintenance
- Status

Account 1

SIP Basic Settings

Account Active	<input checked="" type="checkbox"/>
Account Name	Back_Door
SIP Server	ucm.grandstream.com
Secondary SIP Server	
Outbound Proxy	
Backup Outbound Proxy	
DNS Mode	A Record
SIP User ID	688
Authentication ID	688
Password	••••••••••
TEL URI	Disabled

SIP Advanced Settings

Registration Expiration(m)	60
Local SIP Port	5060

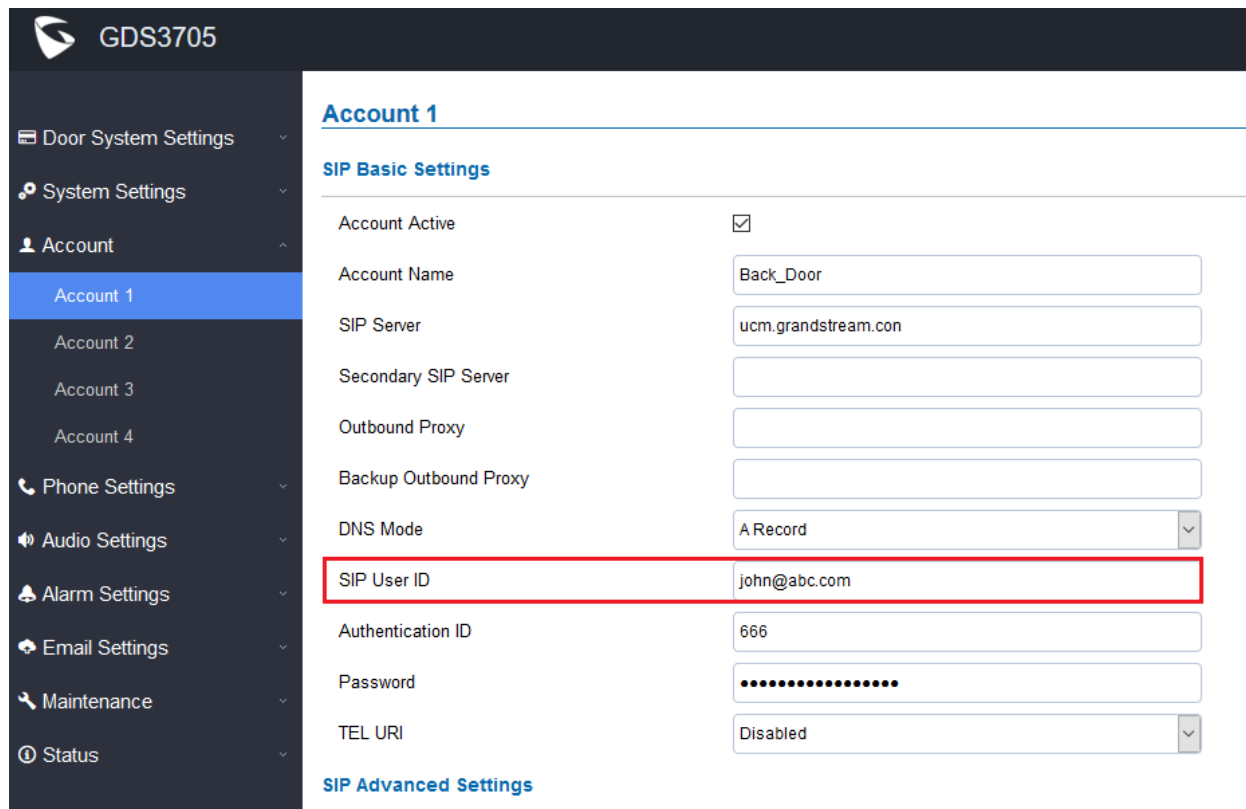

- **Functionality**

This feature is added to enhance the security of SIP accounts configured in GDS3705. Password is invisible from the webUI.

SPECIAL SIP USER ID

- **Web Configuration**

This feature is added to enhance the compatibility of GDS3705 with some SIP Proxys which using special characters like “@” as user ID. This can be found under device web UI: Account → Account X (where X: 1 ~ 4)

The screenshot shows the web configuration interface for a GDS3705 device. The left sidebar contains a menu with options: Door System Settings, System Settings, Account, Account 1 (selected), Account 2, Account 3, Account 4, Phone Settings, Audio Settings, Alarm Settings, Email Settings, Maintenance, and Status. The main content area is titled 'Account 1' and contains 'SIP Basic Settings'. The 'SIP User ID' field is highlighted with a red box and contains the value 'john@abc.com'. Other fields include Account Active (checked), Account Name (Back_Door), SIP Server (ucm.grandstream.com), Secondary SIP Server, Outbound Proxy, Backup Outbound Proxy, DNS Mode (A Record), Authentication ID (666), Password (masked), and TEL URI (Disabled). Below the basic settings is a section for 'SIP Advanced Settings'.

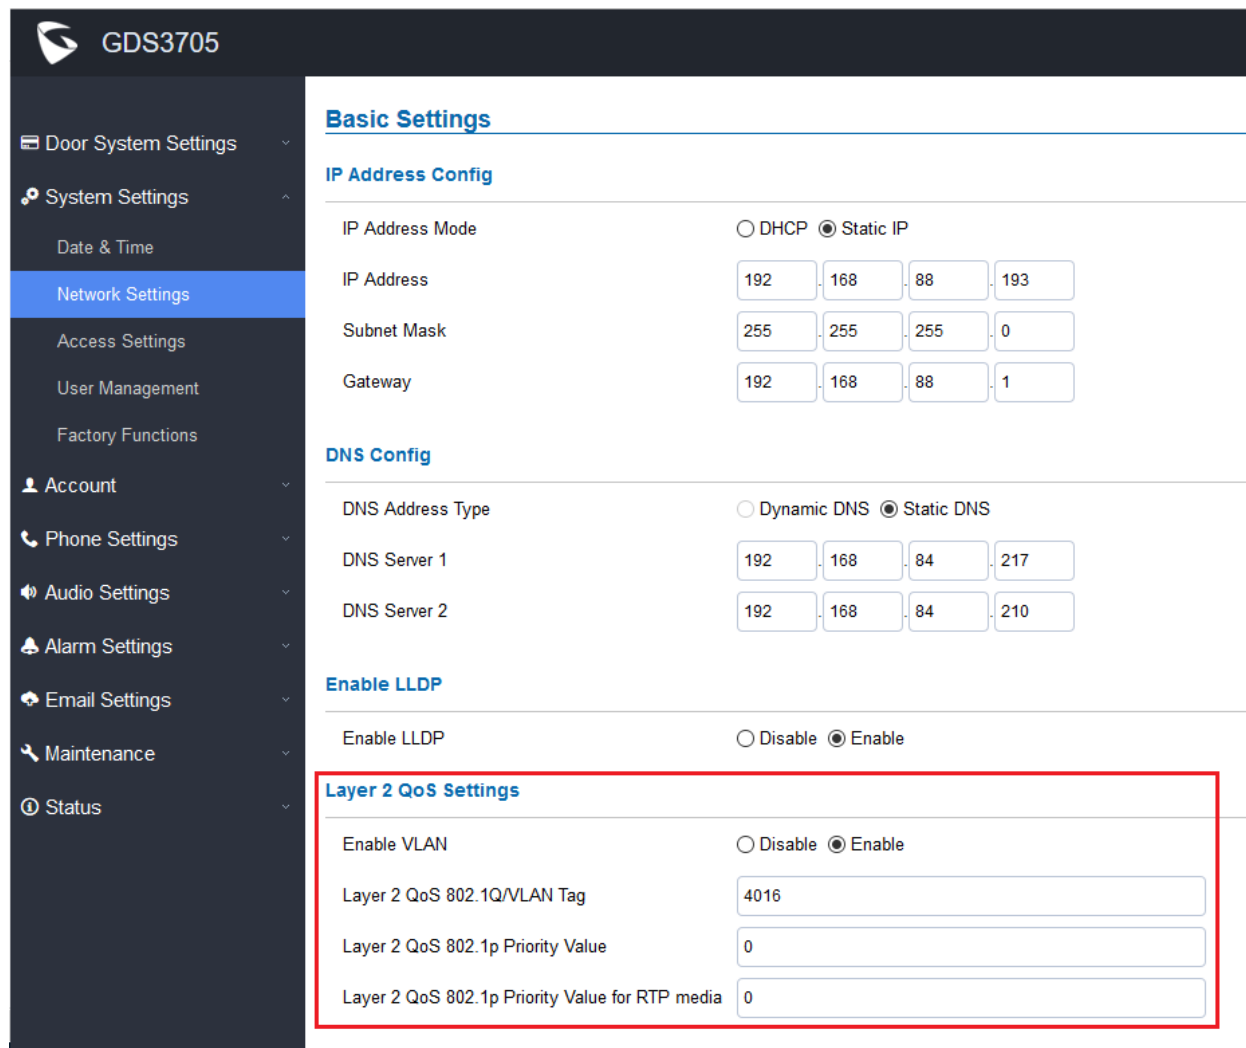

- **Functionality**

This feature is added to enhance the compatibility of GDS3705 with some SIP Proxys which using special characters like “@” as user ID.

EXTENDED VLAN RANGE 0 ~ 4094

- Web Configuration**

This feature is added to enhance the VLAN range. This can be found under device web UI: System Settings → Network Settings → Layer 2 QoS Settings:

The screenshot displays the web configuration interface for a GDS3705 device. The left sidebar contains a navigation menu with the following items: Door System Settings, System Settings (expanded), Date & Time, Network Settings (highlighted), Access Settings, User Management, Factory Functions, Account, Phone Settings, Audio Settings, Alarm Settings, Email Settings, Maintenance, and Status. The main content area is titled 'Basic Settings' and includes sections for IP Address Config, DNS Config, and Enable LLDP. The 'Layer 2 QoS Settings' section is highlighted with a red border and contains the following configuration options:

Section	Parameter	Value
IP Address Config	IP Address Mode	<input type="radio"/> DHCP <input checked="" type="radio"/> Static IP
	IP Address	192.168.88.193
	Subnet Mask	255.255.255.0
DNS Config	DNS Address Type	<input type="radio"/> Dynamic DNS <input checked="" type="radio"/> Static DNS
	DNS Server 1	192.168.84.217
Enable LLDP	Enable LLDP	<input type="radio"/> Disable <input checked="" type="radio"/> Enable
	Layer 2 QoS 802.1Q/VLAN Tag	4016
Layer 2 QoS Settings	Layer 2 QoS 802.1p Priority Value	0
	Layer 2 QoS 802.1p Priority Value for RTP media	0

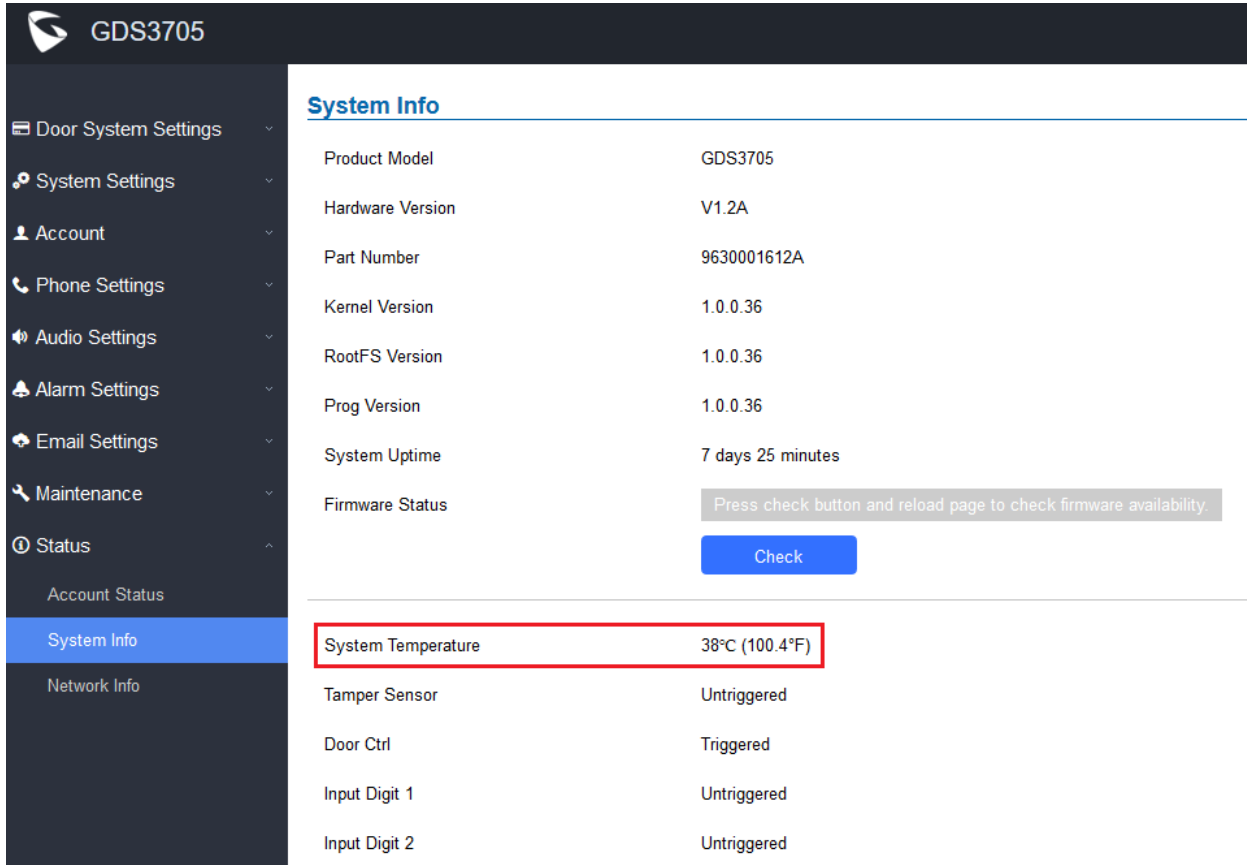

- Functionality**

This feature is added to enhance the VLAN parameter settings. User can input the related VLAN parameters based on the appropriate network environment.

DISPLAY TEMPERATURE IN FAHRENHEIT

- Web Configuration**

This feature is added to meet customers' requirement. This can be found under device web UI: Status → System Info:

The screenshot shows the web configuration interface for a GDS3705 device. The left sidebar contains a menu with options: Door System Settings, System Settings, Account, Phone Settings, Audio Settings, Alarm Settings, Email Settings, Maintenance, Status, Account Status, System Info (highlighted), and Network Info. The main content area is titled 'System Info' and displays various system parameters:

Parameter	Value
Product Model	GDS3705
Hardware Version	V1.2A
Part Number	9630001612A
Kernel Version	1.0.0.36
RootFS Version	1.0.0.36
Prog Version	1.0.0.36
System Uptime	7 days 25 minutes
Firmware Status	Press check button and reload page to check firmware availability. Check
System Temperature	38°C (100.4°F)
Tamper Sensor	Untriggered
Door Ctrl	Triggered
Input Digit 1	Untriggered
Input Digit 2	Untriggered

- Functionality**

This feature is added to meet customers' requirement and user habit.

FIRMWARE VERSION 1.0.0.35

PRODUCT NAME

GDS3705 (*HW Supported: 1.1A, 1.2A, 1.3A, 1.4A, 1.4B*)

DATE

09/21/2018

SUMMARY OF UPDATE

The main purpose of this release is bug fix and feature enhancement since \$1 Beta.

FIRMWARE APPLIES TO BELOW HW VERSION ONLY

HW Version	FW	Comments
GDS3705 HW1.1A	YES	
GDS3705 HW1.2A	YES	
GDS3705 HW1.3A	YES	
GDS3705 HW1.4A	YES	FW1.0.0.20 as Initial Version for this HW version
GDS3705 HW1.4B	YES	FW1.0.0.20 as Initial Version for this HW version

BUG FIX

- Fixed digital input open door mode not functioning as expected.
- Fixed schedule cannot be saved when DI set to open door mode.
- Fixed Direct IP Call mode fail when SIP transmission set to TCP and TLS/TCP mode.
- Fixed no confirmation sound played when using GXP phone's "one key open door" feature to open the door without answering the call from GDS.
- Fixed STUN disabled the local SIP port incorrect.
- Fixed DTMF tone too short sounds like got cut off.
- Fixed when using RFC2833 the DTMF is incorrect.
- Fixed enable "Silent Alarm" mode when alarm triggered at schedule not configured the GDS not sending alarm sound.

ENHANCEMENT

- Added SIP extensions and/or IP addresses or combined “Parallel Hunting” (simultaneously ringing) mode when doorbell pressed.
- Added “Normal Open” and “Normal Close” state option in digit input “Alarm Input” mode.
- Added ability to configure schedule for “Alarm In” Open Door.
- Added option to send “call completed elsewhere” when door is opened successfully by GXP phone so other GXP phones in the open door list will not show “missed call” in the call history.
- Added multiple SIP account support (up to 4 SIP accounts).
- Added feature to support CSV format when import or export data.
- Added “Check for Update” firmware upgrade button like GXV phones to check the latest firmware.
- Added option to set maximum digits dialed so when the number of digit matched the call will immediately sending out by GDS without “#” pressed.
- Added ability to assign/configure a time schedule to the doorbell.

KNOWN ISSUES

- Playing Prompt Audio from Proxy/UCM sometimes distorted.
- Dual Mic function is invalid.
- When doorbell volume set to 0 still hearing the ring back tone.
- Sending repeating registration packets to Server when receiving Terminate/Notify message.
- Silent Alarm to SIP phone still playing siren at phone side after pressing keypad at phone side

NEW FEATURES OVERVIEW

This section lists major new features and describes how to use them from the user's point of view.

MULTIPLE SIP ACCOUNTS

- **Web Configuration**

New feature added to support up to 4 SIP Accounts. This option can be found under device web UI → Account Settings page like below:

GDS3705

Account 1

SIP Basic Settings

Account Active	<input checked="" type="checkbox"/>
Account Name	<input type="text"/>
SIP Server	<input type="text"/>
Secondary SIP Server	<input type="text"/>
Outbound Proxy	<input type="text"/>
Backup Outbound Proxy	<input type="text"/>
DNS Mode	A Record
SIP User ID	<input type="text"/>
Authentication ID	<input type="text"/>
Password	<input type="password"/>
TEL URI	Disabled

SIP Advanced Settings

Registration Expiration(m)	60
Local SIP Port	5060
SIP Transport	UDP

Save

- **Functionality**

This feature added to meet the requirement of customers. Up to 4 SIP Proxy can be configured into GDS3705, solving application scenes like multiple companies or residents in one building but sharing the same entry door. The speed dial shortcut can be configured to help customers easily dial to related party to ask for open door.

- **New P-Value**

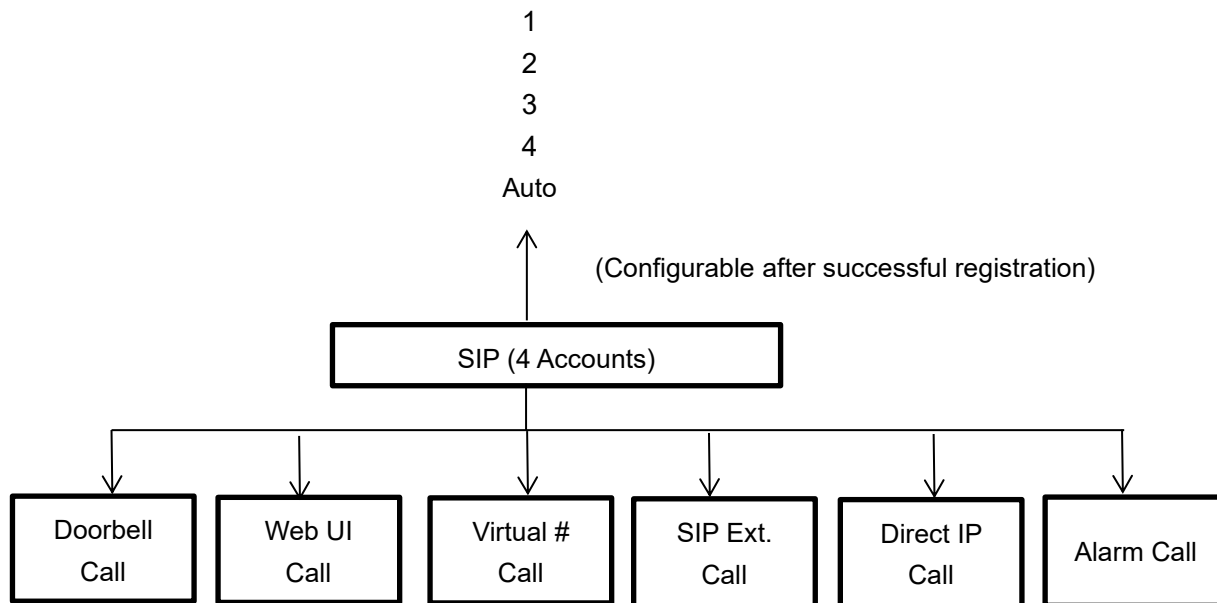

Account 1	Account 2	Account 3	Account 4

- **Flow Chart of Multiple SIP Account**

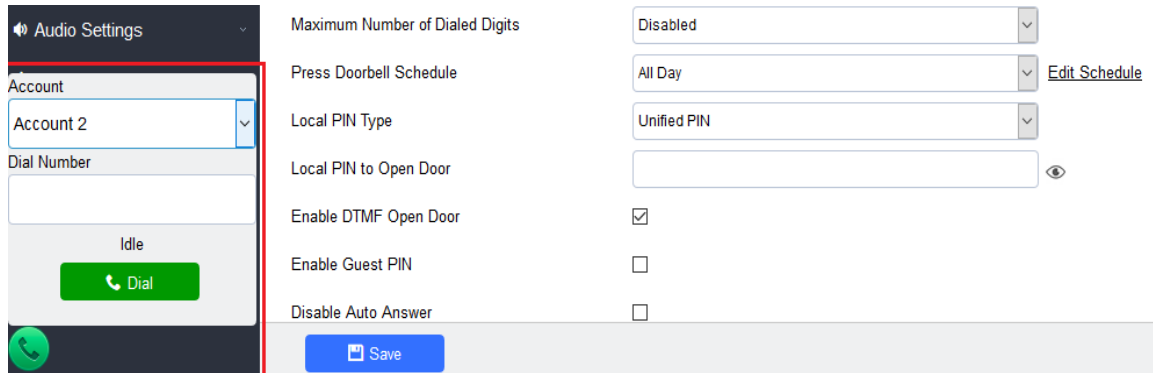

1) **Doorbell Call:**

Doorbell call can be configured to use maximum 4 SIP account line to call. The specific line used is configured in the “Card Management” settings. When configured as Auto (only works when related SIP proxy belong to one owner and function like fail-over), the GDS will check all the 4 accounts registered and call out using the first available registered account. Normal usage will be configured using selected account (in the “Card Management” page) to call out.

2) WebUI Call:

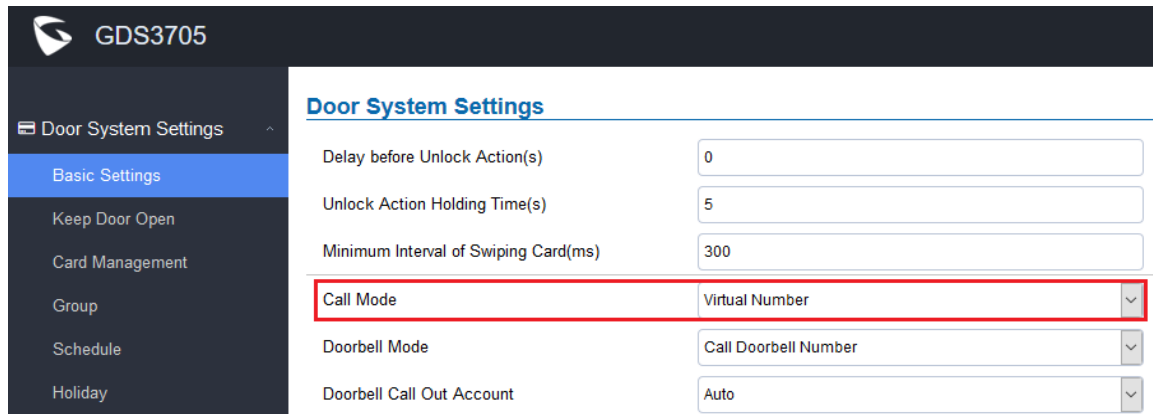

WebUI call is following the same calling protocol like 1). See below screenshot:

Maximum Number of Dialed Digits	Disabled
Press Doorbell Schedule	All Day Edit Schedule
Local PIN Type	Unified PIN
Local PIN to Open Door	<input type="text"/>
Enable DTMF Open Door	<input checked="" type="checkbox"/>
Enable Guest PIN	<input type="checkbox"/>
Disable Auto Answer	<input type="checkbox"/>

3) Virtual # Call:

Virtual # call can be configured in “Basic Settings” by choose “Call Mode” to be “Virtual Number” (default setting) like below:

Delay before Unlock Action(s)	0
Unlock Action Holding Time(s)	5
Minimum Interval of Swiping Card(ms)	300
Call Mode	Virtual Number
Doorbell Mode	Call Doorbell Number
Doorbell Call Out Account	Auto

Then configure and select the “Call Out Account” in the “Card Management” page like below, by using select specific account to call out:

Door System Settings

Basic Settings

Keep Door Open

Back

4) SIP Call:

Similar to “Virtual # Call”, first configured in “Basic Settings” by choose “Call Mode” to be “SIP Number” (default setting) like below:

Door System Settings

Basic Settings

Keep Door Open

Card Management

Group

Schedule

Door System Settings

Delay before Unlock Action(s)	<input type="text" value="0"/>
Unlock Action Holding Time(s)	<input type="text" value="5"/>
Minimum Interval of Swiping Card(ms)	<input type="text" value="300"/>
Call Mode	<input type="text" value="SIP Number"/>
Doorbell Mode	<input type="text" value="Call Doorbell Number"/>

If the SIP extension has been configured in the “Card Management” page, then the call will send out using the account configured; if the SIP extension has not been configured in the “Card management” page, then default “Auto” will be used and call will send out via fist available registered SIP account.

Status	Schedule	<input type="text" value=""/>
	Enable	<input type="checkbox"/>

Note: Open Door will not work by PIN if password is blank.

5) Direct IP Call:

The “Direct IP Call” by default will always use “Account 1” to call out, using default port 5060. If different port or account used in the device at callee, it has to be configured according to ring at the correct port. For “Direct IP Call” the “User Random Port” has to be DISABLED in the device as callee.

By default “Enable Direct IP Call” is enabled in the “Phone Settings” of GDS.

Door System Settings	
Basic Settings	Delay before Unlock Action(s) <input type="text" value="0"/> Unlock Action Holding Time(s) <input type="text" value="5"/> Minimum Interval of Swiping Card(ms) <input type="text" value="300"/>

Audio Settings	Maximum Number of Dialed Digits <input type="text" value="Disabled"/>
Alarm Settings	Press Doorbell Schedule <input type="text" value="All Day"/> Edit Schedule

6) Alarm Call:

Alarm Call account selection can be configured in “Alarm Settings” by selecting “Alarm Phone” like below. The call out function is similar to doorbell call out function. If configured as “Auto”, the GDS will check all the 4 accounts registered and call out using 1st available registered account. Normally it will be configured to use particular account to call.

- Door System Settings
- System Settings
- Account
- Phone Settings
- Audio Settings
- Alarm Settings
 - Alarm Events Config
 - Alarm Schedule Settings
 - Alarm Action Settings
 - Alarm Phone
- Email Settings

<http://www.grandstream.com/products/physical-security/facility-access-systems>

- **Multiple SIP Account Call Functions**

1) SIP Registration:

The 4 SIP accounts can be configured independently to work without interfering each other.

GDS3705

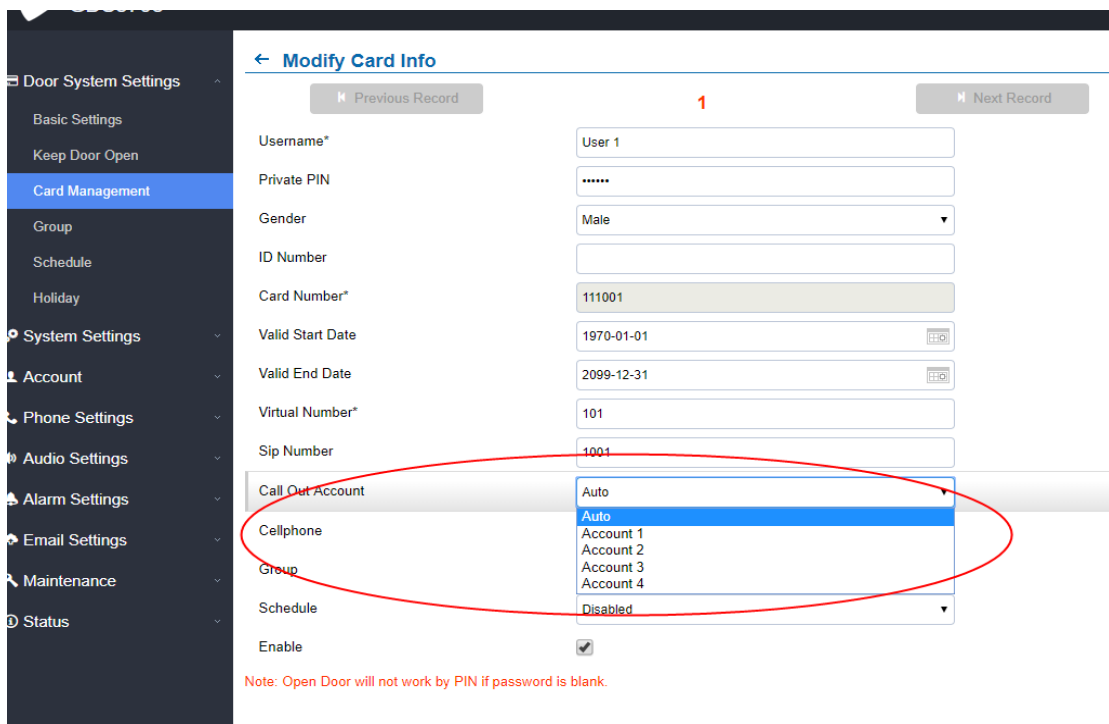

Account Status

Account	SIP User ID	SIP Server	SIP Registration Status
Account 1	1796	192.168.84.22	Online
Account 2	1052	192.168.91.252	Online
Account 3	1007	192.168.86.199	Online
Account 4	1001	192.168.91.3	Offline

Left sidebar menu: Door System Settings, System Settings, Account, Phone Settings, Audio Settings, Alarm Settings, Email Settings, Maintenance, Status, Account Status (selected), System Info, Network Info.

2) GDS as Caller (Virtual # Mode)

The related “Virtual #” and “Account” can be configured in the “Card Management” page. “Auto” means polling from account 1 to 4 using already registered account to call and fist available registered SIP account will be used.

← Modify Card Info

Schedule Disabled

Enable ☒

Note: Open Door will not work by PIN if password is blank.

Left sidebar menu: Door System Settings, Basic Settings, Keep Door Open, Card Management (selected), Group, Schedule, Holiday, System Settings, Account, Phone Settings, Audio Settings, Alarm Settings, Email Settings, Maintenance, Status.

The “Virtual #” is actually the “Speed Dial”. In above screenshot, virtual number “101” is speed dial shortcut for SIP number “1001”. When user dial “101”, the GDS will actually use the account configured in the “Card Management” page to call out. If user dial “101#”, GDS will call out via SIP number “1001” using related account.

For example, in a multi-tenant building, “virtual number” can be configured using the building room number, while actually “SIP number” can be mapped to different SIP Proxy using related SIP extension number(s).

3) GDS as Caller (SIP Mode)

When configured in this mode, the GDS will automatically choose from Account 1 to 4 and use the first available registered account to call out.

4) GDS as Caller (Alarm Call)

“Alarm Call” will use configured “Auto” or selected account to call out. If set to “Auto”, will use the first available successful registered proxy to call out.

5) GDS as Callee (Auto Answer)

The 1st incoming call will be answered automatically by default.

GDS3705 ONLY support one call at a particular time.

GDS3710 when enabled multiple call (maximum 4 calls simultaneously), digits “1”, “2”, “3” and “4” are used to switch among different calls.

6) Doorbell Call

Support pre-configured calling number, maximum support 10 numbers.

7) White List

The “White List” under different SIP account is working independently.

FIRMWARE VERSION 1.0.0.31

PRODUCT NAME

GDS3705 (*HW Supported: 1.1A, 1.2A, 1.3A, 1.4A, 1.4B*)

DATE

08/06/2018

SUMMARY OF UPDATE

The main purpose of this release is bug fix and enhancement since \$1 Beta.

FIRMWARE APPLIES TO BELOW HW VERSION ONLY

HW Version	FW	Comments
GDS3705 HW1.1A	YES	
GDS3705 HW1.2A	YES	
GDS3705 HW1.3A	YES	
GDS3705 HW1.4A	YES	FW1.0.0.20 as Initial Version for this HW version
GDS3705 HW1.4B	YES	FW1.0.0.20 as Initial Version for this HW version

BUG FIX

- Fixed device reboot after event alarm.
- Fixed device keep repeating registration.
- Fixed immediately Open Door issue when DST enabled.
- Fixed STUN process error.
- Fixed UI phone icon still showing "system busy" after the call.
- Fixed the key light not bright issue when using HTTP API to open door.
- Fixed SSH connection unauthorized after reboot when using static IP.
- Fixed "Expired Timer" in "Card Issuing Mode" cannot be saved.
- Fixed reboot issue when data exchanging with UCM.
- Fixed device cannot output key information when used as Wiegand output device.
- Fixed when configured SIP Alarm and Sound Alarm but continuously trigger alarms, the alarm sometime not sound but play door bell tone.

ENHANCEMENT

- Synchronization SRTP configuration UI with GDS3710, added “Enable but Not Forced; Enable and Forced” option.

KNOWN ISSUES

- Playing Prompt Audio from Proxy/UCM sometimes distorted.
- Dual Mic function is invalid.
- When doorbell volume set to 0 still hearing the ring back tone.
- Sending repeating registration packets to Server when receiving Terminate/Notify message.
- Silent Alarm to SIP phone still playing siren at phone side after pressing keypad at phone side

NEW HTTP API/P-VALUE

- N/A

FIRMWARE VERSION 1.0.0.28

PRODUCT NAME

GDS3705 (*HW Supported: 1.1A, 1.2A, 1.3A, 1.4A, 1.4B*)

DATE

06/19/2018

SUMMARY OF UPDATE

The main purpose of this release is bug fix and enhancement since \$1 Beta.

FIRMWARE APPLIES TO BELOW HW VERSION ONLY

HW Version	FW	Comments
GDS3705 HW1.1A	YES	
GDS3705 HW1.2A	YES	
GDS3705 HW1.3A	YES	
GDS3705 HW1.4A	YES	FW1.0.0.20 as Initial Version for this HW version
GDS3705 HW1.4B	YES	FW1.0.0.20 as Initial Version for this HW version

BUG FIX

- Fixed Import data exception.
- Fixed Wiegand as output device open door issue.
- Fixed Chime ring issue when Hostage Code Call Enabled.
- Fixed DNS analysis problem.
- Fixed the Valid Start Date input limit issue.
- Fixed “,” in the group name causing UI display abnormal.
- Fixed ringing timeout set to “0” causes call failing to initiate.
- Fixed doorbell call failure if using IP peering but with no default port.

ENHANCEMENT

- Added HTTP Command to Open Door.
- Added 3CX compatibility features (e.g.: server side controlled UI automatic login)
- Added Optional Notification for out of schedule accessing attempts.
- Added Test Button for Alarm Action.
- Added missing Log Notification Type (Reboot/Reset/ConfigUpdate).

- Added Schedule Open Door Feature.
- Synchronized phone library with GXP phones with latest firmware.
- Added verification when importing configuration from UI.
- Added displaying SN number in the system information page.
- Added reboot protective schema when downloading interrupted or failed during upgrade process.

KNOWN ISSUES

- Playing Prompt Audio from Proxy/UCM sometimes distorted.
- Dual Mic function is invalid.
- When doorbell volume set to 0 still hearing the ring back tone.
- Sending repeating registration packets to Server when receiving Terminate/Notify message.
- GDS Keypad input as Wiegand output still not working yet.
- Silent Alarm to SIP phone still playing siren at phone side after pressing keypad at phone side

NEW HTTP API/P-VALUE

<parameter>=<value>	Page	Values	Comments
type=<string>	Keep Door Open	sch_open_door	Get Keep Door Open Configs

P15407=<int>		0,1	Enable Non-scheduled Access Alarm
P15408=<int>		1-10	Non-scheduled Access Alarm Profile

NEW FEATURES OVERVIEW

This section lists major new features and describes how to use it from the user's point of view.

HTTP API OPEN DOOR

- Web Configuration**

New feature added and this option can be found under device web UI → Door System Settings → Basic Settings page like below:

- Functionality**

This feature allow 3rd party system integrators to do 2nd stage development based on provided HTTP API. Once enabled, door can be remotely opened by customers who running some scripts from HTTP Server to remotely control the opening of the door.

- New P-Value**

P-Value	Values	Default Value	Comments
P15424=<int>	Door System Basic Setting	0,1	Enable HTTP API Remote Open Door

More detailed information, please refer to latest HTTP API documentation for GDS37xx series, which can be found from Grandstream website:

http://www.grandstream.com/sites/default/files/Resources/gds37xx_http_api.pdf

NON-SCHEDULED ACCESS ALARM

- Web Configuration**

This page can be found under “Alarm Settings” → “Alarm Events Config”

Alarm Settings

- Alarm Events Config
- Alarm Schedule Settings
- Alarm Action Settings
- Alarm Phone List

Email Settings

- Maintenance
- Status

Alarm Config

Enable Silent Alarm Mode
 ☐

Enable Hostage Code
 ☐

Enable Tamper Alarm
 ☐

Enable Alarm for PIN Input Error
 ☒

Select Alarm Action Profile

profile1

[Edit Profile](#)

Enable Non-scheduled Access Alarm
 ☒

Select Alarm Action Profile

profile1

[Edit Profile](#)

- Functionality**

By default this feature is disabled. When configured and enabled, this feature will allow related building or office managers aware the abnormal activities when legitimated users access the door out of the allowed configured schedule. For example, entry during weekend or night at not working hours.

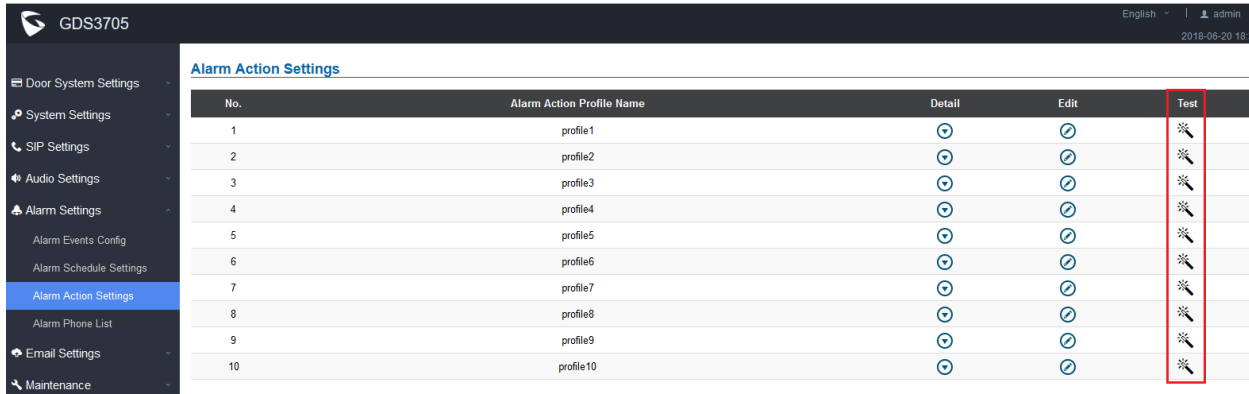

- New Pvalue**

P-Value	Values	Default Value	Comments
P15408	1~10	1	Non-scheduled Access Alarm Action Profile

"TEST" BUTTON IN ALARM ACTION

- Web Configuration**

This option can be found under device web UI "Alarm Settings" → Alarm Action Settings

No.	Alarm Action Profile Name	Detail	Edit	Test
1	profile1			
2	profile2			
3	profile3			
4	profile4			
5	profile5			
6	profile6			
7	profile7			
8	profile8			
9	profile9			
10	profile10			

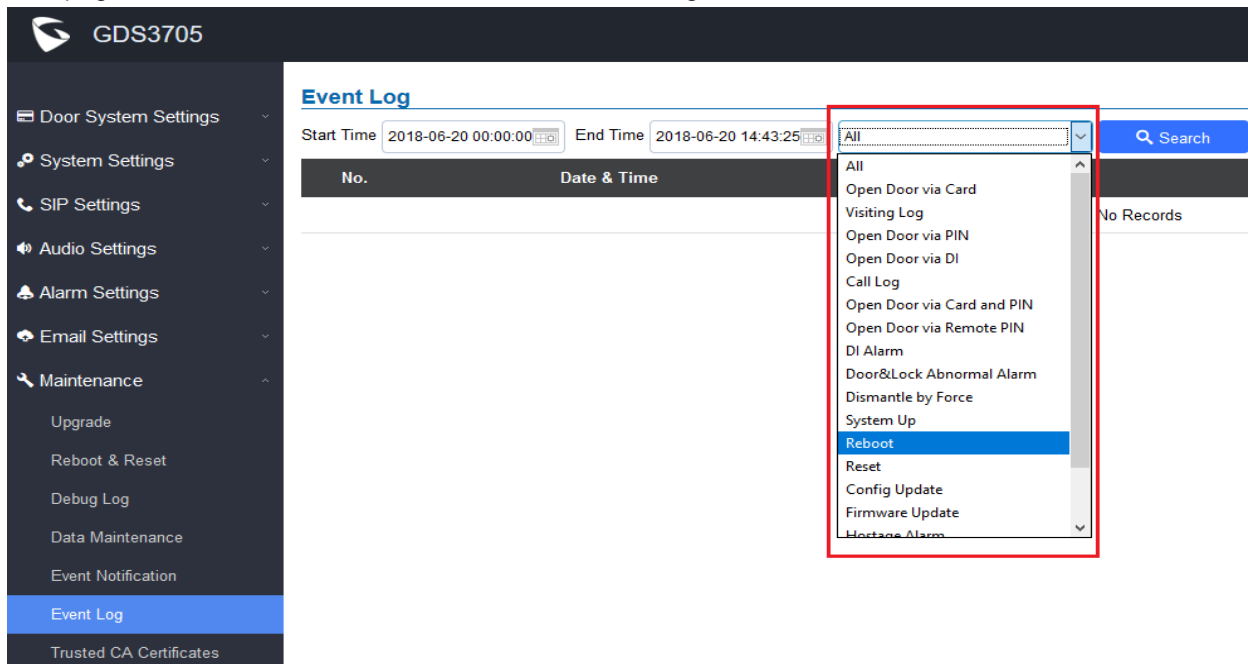

- Functionality**

New feature added to allow use to click the "Test" button in the UI to test whether the configured Alarm Action working as expected during the configuration stage.

LOG NOTIFICATION TYPE

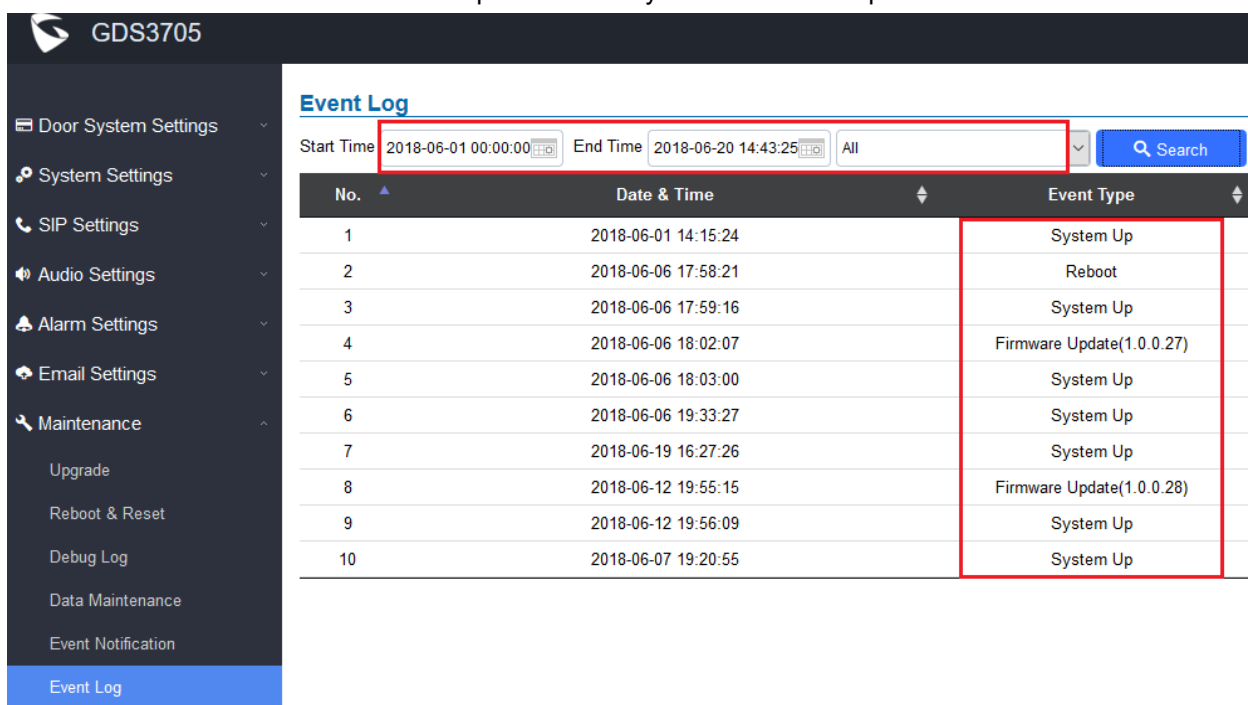

- **Web Configuration**

This page can be found under “Maintenance” → Event Log

- **Functionality**

Improved this feature to allow users or system administrator to search and display the related system logs in the webUI to understand the device operation history. See below example:

No.	Date & Time	Event Type
1	2018-06-01 14:15:24	System Up
2	2018-06-06 17:58:21	Reboot
3	2018-06-06 17:59:16	System Up
4	2018-06-06 18:02:07	Firmware Update(1.0.0.27)
5	2018-06-06 18:03:00	System Up
6	2018-06-06 19:33:27	System Up
7	2018-06-19 16:27:26	System Up
8	2018-06-12 19:55:15	Firmware Update(1.0.0.28)
9	2018-06-12 19:56:09	System Up
10	2018-06-07 19:20:55	System Up

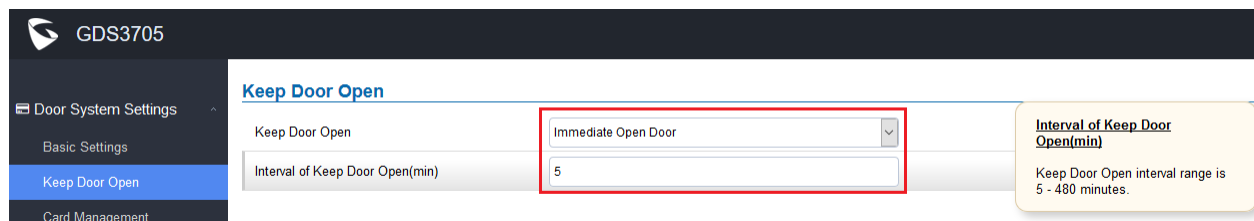

OPEN DOOR BY CONFIGURED SCHEDULE OR TIME WINDOW

- **Web Configuration**

This option can be found under device web UI → Door System Settings → Keep Door Open:

There are two modes:

1. Immediate Open Door (One Time Only Action)

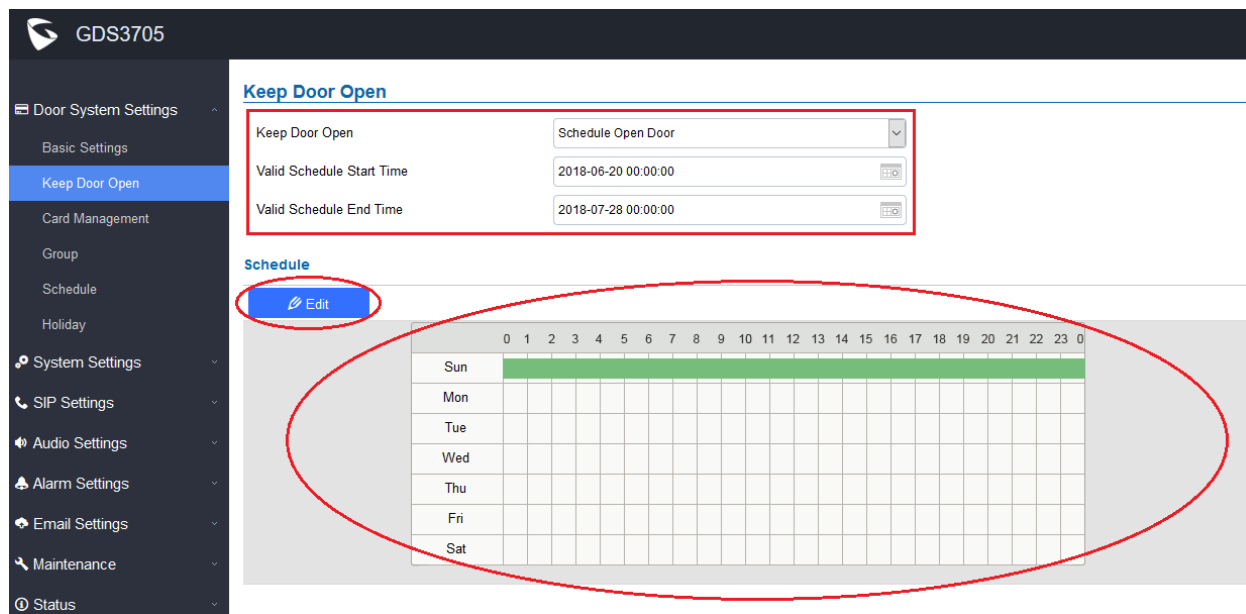

Keep Door Open

Keep Door Open: Immediate Open Door

Interval of Keep Door Open(min): 5

Interval of Keep Door Open(min)
Keep Door Open interval range is 5 - 480 minutes.

2. Schedule Open Door (Repeated Action)

Keep Door Open

Keep Door Open: Schedule Open Door

Valid Schedule Start Time: 2018-06-20 00:00:00

Valid Schedule End Time: 2018-07-28 00:00:00

Schedule

[Edit](#)

	0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	0
Sun																									
Mon																									
Tue																									
Wed																									
Thu																									
Fri																									
Sat																									

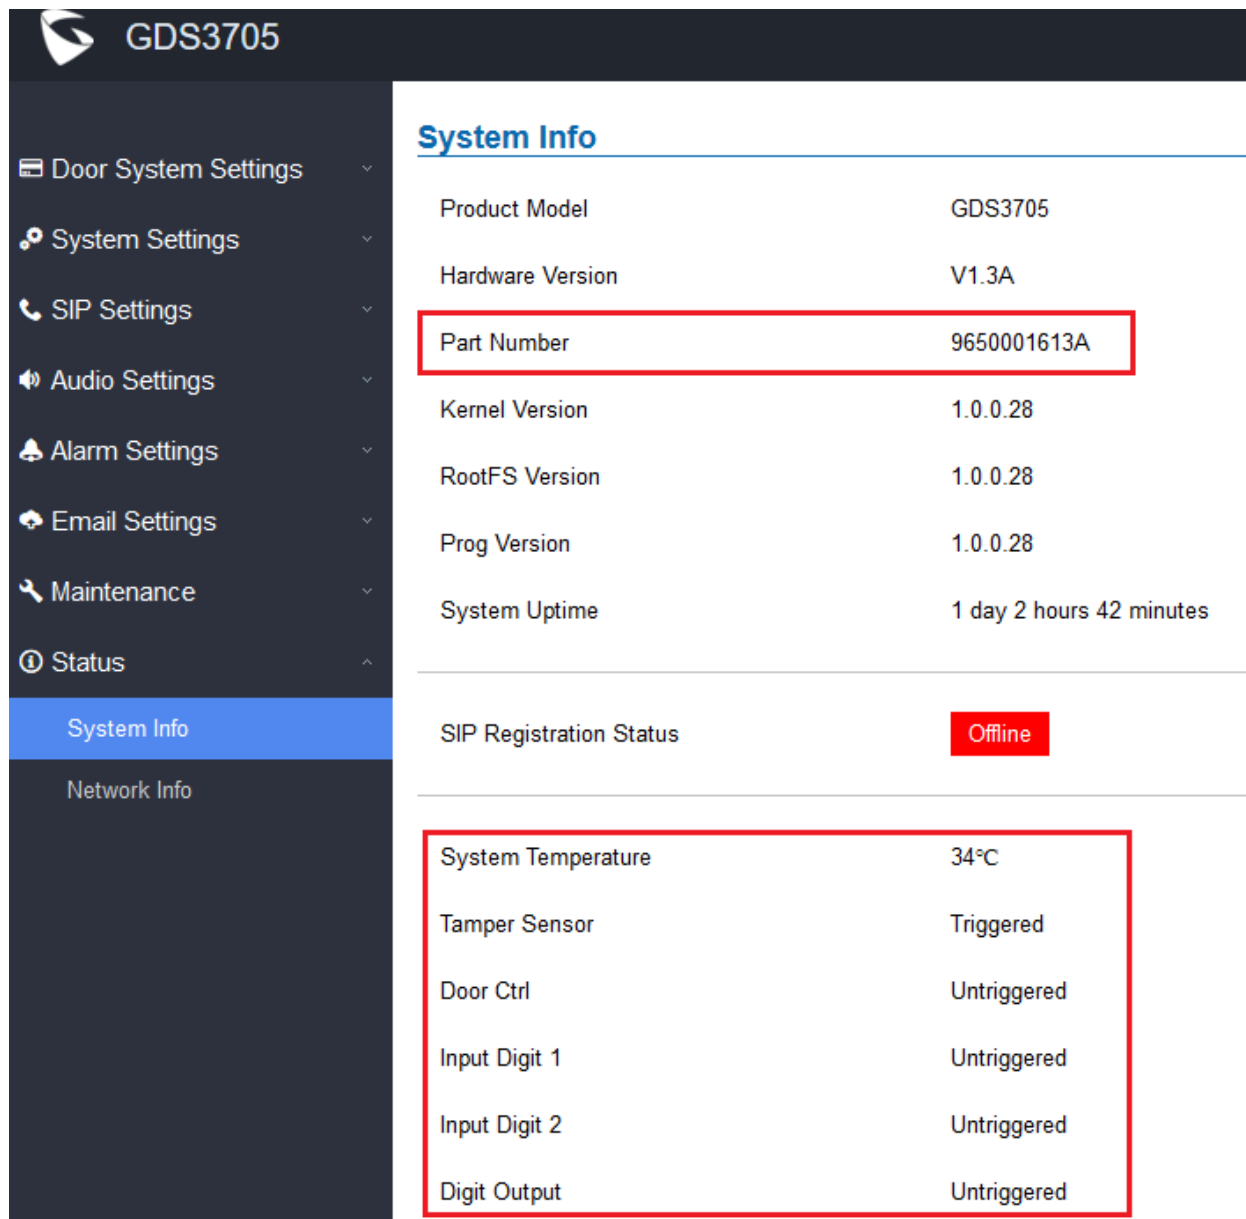

- **Functionality**

By default this feature is disabled. This feature when enabled will allow usage scene like schools or similar private or public places where the door needs to keep open at specific time window but closed otherwise. Also good for buildings or properties where a party or seminar need to be hosted for some period of time in a day (the door keeps open) then back to locked with authorized entry after that. Also good for lunch breaks in a factory or company where door open and no access log required.

MORE INFORMATION IN SYSTEM INFO PAGE

- **Web Configuration**

This option can be found under device web UI “Status” → System Info

GDS3705

System Info

Product Model	GDS3705
Hardware Version	V1.3A
Part Number	9650001613A
Kernel Version	1.0.0.28
RootFS Version	1.0.0.28
Prog Version	1.0.0.28
System Uptime	1 day 2 hours 42 minutes

SIP Registration Status: **Offline**

System Temperature	34°C
Tamper Sensor	Triggered
Door Ctrl	Untriggered
Input Digit 1	Untriggered
Input Digit 2	Untriggered
Digit Output	Untriggered

- **Functionality**

New feature added to allow user and system administrator to view more live operation information of GDS3705 device.

FIRMWARE VERSION 1.0.0.26

PRODUCT NAME

GDS3705 (*HW Supported: 1.1A, 1.2A, 1.3A, 1.4A*)

DATE

04/26/2018

SUMMARY OF UPDATE

The main purpose of this release is bug fix and enhancement for S1 Beta.

FIRMWARE APPLIES TO BELOW HW VERSION ONLY

HW Version	FW	Comments
GDS3705 HW1.1A	YES	
GDS3705 HW1.2A	YES	
GDS3705 HW1.3A	YES	
GDS3705 HW1.4A	YES	FW1.0.0.20 as Initial Version for this HW version

BUG FIX

- Fixed Door Chime still plays after call answered.
- Fixed BagRep. Kiev (capital of Ukraine) missing in time zone list.
- Fixed wrong log date for Wiegand reset.
- Fixed callee hang up the device still playing tone continuously.
- Fixed when ringing timeout set to "0" call cannot be initiated.
- Fixed WebGUI limitation for Alarm Phone List and White List is not applied to P value import files and no error report generated when limitation overflow during the file import or restore.
- Fixed log failed to get version number if there is power outage during upgrade process.
(**Please avoid power and network outage during firmware upgrade process!**)

ENHANCEMENT

- Added displaying logs at device's webUI.
- Added ability to disable certificate validation.
- Added log record for system Up/Reboot/Reset/ConfigUpdate/FirmwareUpdate.
- Added support for uploading Trusted CA Certificates.
- Optimized socket/fd close.
- Changed MAC address to lowercase in exported data.

- Added Factory Function for Audio Loopback and Certificate Verification.
- Improved if firmware upgrade happened during a call, the other processes will not exit until call end. (**not recommend** doing firmware upgrade during a call, **suggest** doing upgrade when device idle)
- Separate configuration parameters for firmware upgrade and configuration provisioning.
- Added Event Notification support for self-define URL Template, HTTPS and FQDN.
- Improved the style of Form Element.
- Added Valid Start/End Date for RFID Card for management convenience.
- Improved "Password Recovery Email" configuration and check validation based on feedback.

KNOWN ISSUES

- Zero Config Feature with UCM is not yet implemented.
- Playing Prompt Audio from Proxy/UCM sometimes distorted.
- Dual Mic function is invalid.
- When doorbell volume set to 0 still hearing the ring back tone.
- Sending repeating registration packets to Server when receiving Terminate/Notify message.
- GDS Keypad input as Wiegand output still not working yet.
- Silent Alarm to SIP phone still playing siren at phone side after pressing keypad at phone side

NEW FEATURES OVERVIEW

This section lists major new features and describes how to use it from the user's point of view.

EVENT NOTIFICATION

- Web Configuration**

New feature added and this option can be found under device web UI → Maintenance → Event Notification.

GDS3705

Event Notification

Enable Event Notification ☐

Via Type HTTP

HTTP/HTTPS Server

HTTP/HTTPS Server Username

HTTP/HTTPS Server Password

URL Template

Template Variables

- `${MAC}` : MAC Address
- `${TYPE}` : Event Type
- `${WARNING_MSG}` : Event Message
- `${DATE}` : Date & Time

Template Samples

- `1: {"mac":"${MAC}","content":"${WARNING_MSG}"}`
- `2: <body><mac>${MAC}</mac><content>${WARNING_MSG}</content></body>`
- `3: mac=${MAC}&content=${WARNING_MSG}`

- Functionality**

This feature allow 3rd party HTTP Server to collect event notification lively from GDS3705. Server URL, Username and Password are required to authenticate the operation. Also 3rd party can use template to collect the operation status of the device, used for cloud solution.

- New P-Value**

P-Value	Values	Default Value	Comments
P6767	1- HTTP; 2- HTTPS	1	Firmware Upgrade Via Type
P6768	<string> Max.length=512		Firmware Upgrade HTTP/HTTPS User Name
P6769	<string> Max.length=512		Firmware Upgrade HTTP/HTTPS Password

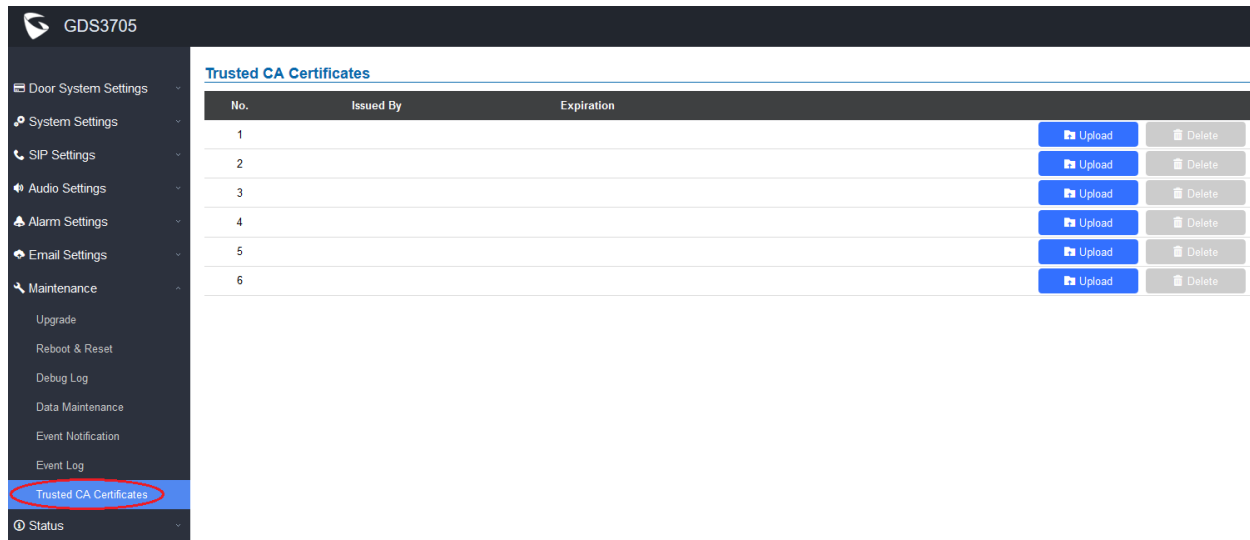

P8463	0 - Disable; 1 - Enable	0	Validate Server Certificates
P8433-P8438	<string> Max.length=4096		Trusted CA Certificates Files
P15416	<string> Max.length=1024	{"mac":"\${MAC}","content":"\${WARNING_MSG}"}	Event Notification URL Template
P15417	1- HTTP; 2- HTTPS	1	Event Notification Via Type

TRUSTED CA CERTIFICATES

- Web Configuration**

Added “Upload” and “Delete” Trusted CA Certificates management.

This page can be found under “Maintenance” → Trusted CA Certificates

GDS3705

Trusted CA Certificates

No.	Issued By	Expiration	Upload	Delete
1			Upload	Delete
2			Upload	Delete
3			Upload	Delete
4			Upload	Delete
5			Upload	Delete
6			Upload	Delete

- Functionality**

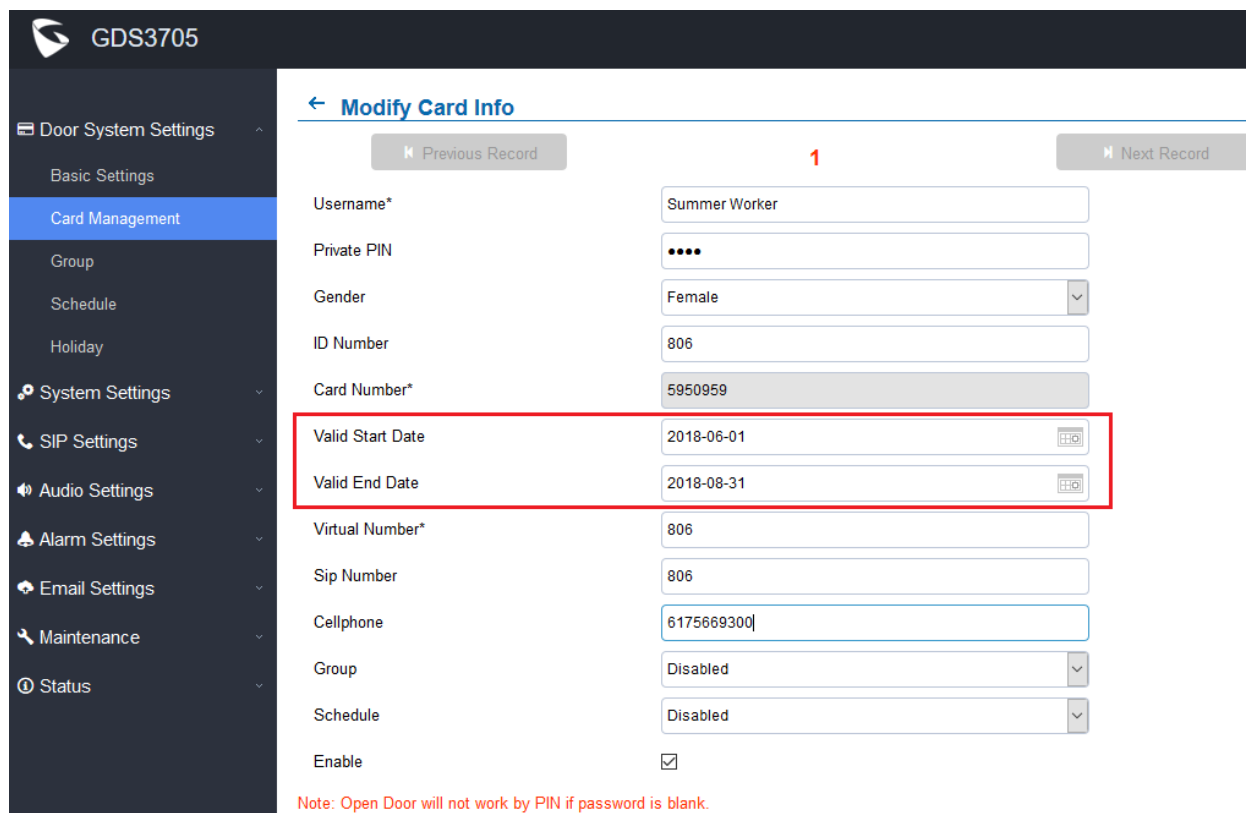

This feature allow the management of Trusted CA Certificates.

CARD MANAGEMENT – Valid Start/End Date for Card/User

- **Web Configuration**

New feature added the configuration of Start and End Date of the Card/User, implemented based of customer feedback. This helps the management and maintenance task of daily access system.

This option can be found under device web UI “Door System Settings” → Card Management → Click “Edit” to modify each Card/User.

The screenshot shows the 'Modify Card Info' form in the GDS3705 web interface. The form contains various fields for user information. The 'Valid Start Date' and 'Valid End Date' fields are highlighted with a red box.

Modify Card Info

Previous Record 1 Next Record

Username* Summer Worker

Private PIN ****

Gender Female

ID Number 806

Card Number* 5950959

Valid Start Date 2018-06-01

Valid End Date 2018-08-31

Virtual Number* 806

Sip Number 806

Cellphone 6175669300

Group Disabled

Schedule Disabled

Enable ☒

Note: Open Door will not work by PIN if password is blank.

- **Functionality**

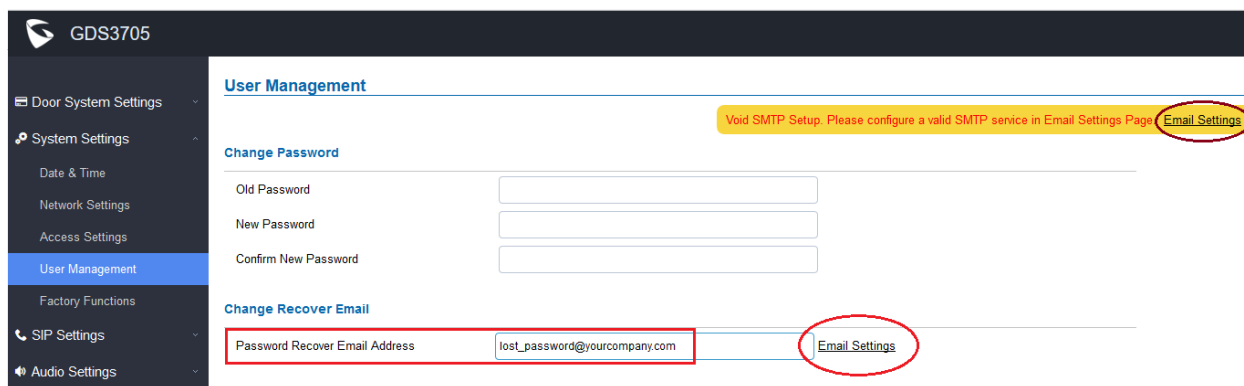

This helps the management and maintenance task of daily access system.

For example, customer can pre-configure the date of the cards for new employees or temporary seasoning workers and send out the cards before new employees coming to work.

PASSWORD RECOVER EMAIL CONFIGURATION

- **Web Configuration**

This page can be found under “System Settings” → User Management

GDS3705

User Management

Void SMTP Setup. Please configure a valid SMTP service in Email Settings Page [Email Settings](#)

Change Password

Old Password

New Password

Confirm New Password

Change Recover Email

Password Recover Email Address [Email Settings](#)

- **Functionality**

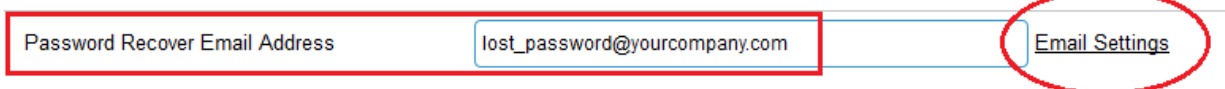

Improved this feature layout based on feedback. For security consideration, this device does not have hard reset key therefore administration password is very important. “Password Recover Email” is designed for user who lost password, but that has to be configured correctly before this can start function. Also whenever user changing the administrator password, this will also kick in to prompt user to configure the recover email. There are two pages involved this configuration or settings:

1) User Management Page:

As see in above screenshot, whenever change administrator password but SMTP setting is not configured, the “Void SMTP Setup. Please configure a valid SMTP service in Email Setting Page!” will prompt up, reminding user to setup the correct SMTP service.

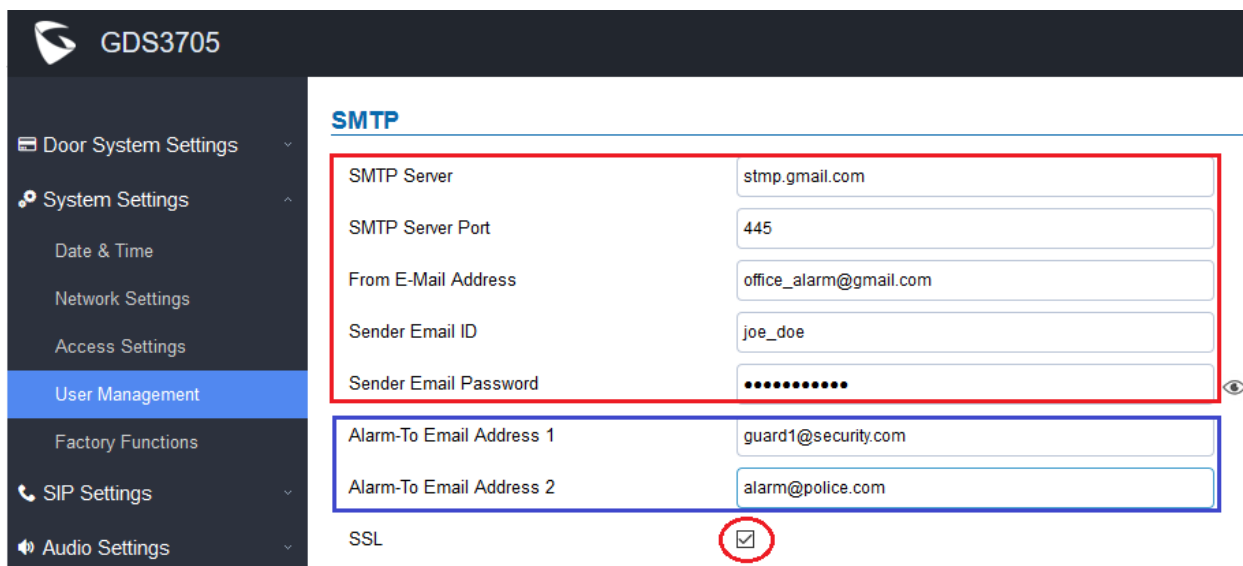

Users are strongly suggested to configure the “Password Recover Email Address”, similar to below:

Change Recover Email

Password Recover Email Address [Email Settings](#)

There are two “Email Settings” in the page, click any of them will be directed to following screen:

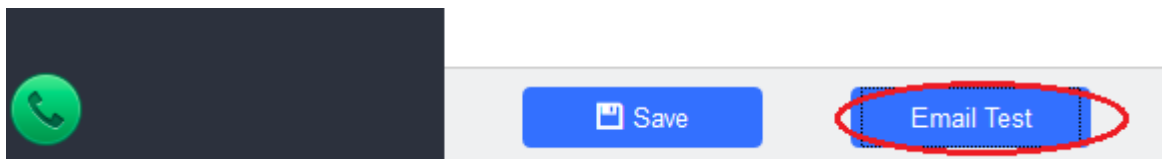

GDS3705

- Door System Settings
- System Settings**
 - Date & Time
 - Network Settings
 - Access Settings
 - User Management**
 - Factory Functions
- SIP Settings
- Audio Settings

SMTP

SMTP Server	smtp.gmail.com
SMTP Server Port	445
From E-Mail Address	office_alarm@gmail.com
Sender Email ID	joe_doe
Sender Email Password
Alarm-To Email Address 1	guard1@security.com
Alarm-To Email Address 2	alarm@police.com
SSL	<input checked="" type="checkbox"/>

Once configured, user can click the “Email Test” button located at the bottom of this configuration page to test the validation of the configuration:

 Save Email Test

GDS3705

If the configuration is incorrect, following prompt will be displayed on screen:

Invalid Response. Please check network connection or SMTP settings, or contact the email service provider.

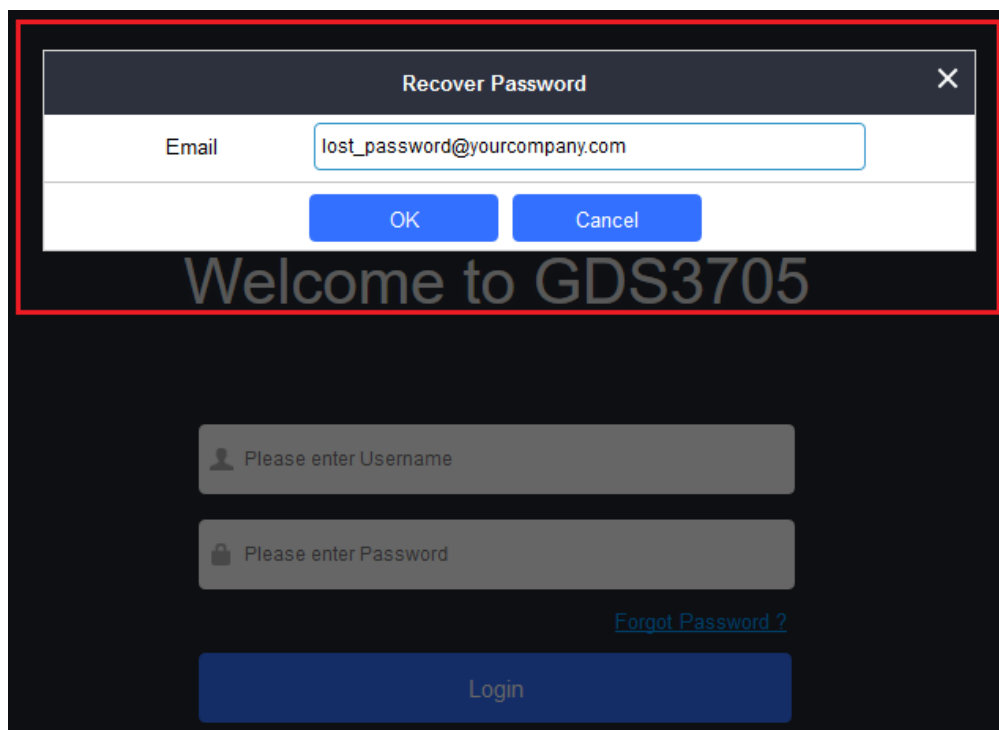

2) Login Page

At the login page, there is a link showing “Forgot Password ?”

The screenshot shows the login page for GDS3705. It has a dark blue background with the text "Welcome to GDS3705" at the top. Below this are two white input fields: "Please enter Username" and "Please enter Password". To the right of the password field is a blue link "Forgot Password ?" which is circled in red. At the bottom is a large blue button labeled "Login".

Click the link will pop up the following page to ask input the “Email Address” for the Recover Password to be sent to:

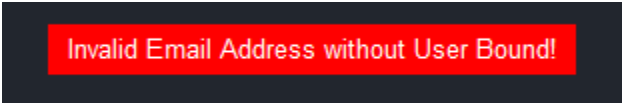

The screenshot shows a modal dialog box titled "Recover Password" with a close button (X) in the top right corner. Inside the dialog, there is an "Email" label and a text input field containing "lost_password@yourcompany.com". Below the input field are two buttons: "OK" and "Cancel". The dialog box is overlaid on the login page, which is dimmed in the background. The "Forgot Password ?" link is visible below the password field in the background.

If the “Password Recover Email Address” and related SMTP is configured correctly, then click the “OK”

button the device will email the administrator password to the inputted email address, if the email address entered matches the pre-configured “Password Recover Email Address” inside the device and the device with working SMTP service configured.

Otherwise the device will prompt the following message at top of the UI page to advise user to configure the related parameters or service, to make this feature working. User can still click “Cancel” to omit these setting and continue the UI operation but this is bad operation behavior.

Invalid Email Address without User Bound!

Grandstream strongly suggest user to configure a working email address as “Password Recover Email Address” and also configure a good SMTP service to the device. So if something happened, the administrator could get the password recover email to unlock the device.

Also with a working SMTP service configured, alarm emails can also be sent out. Snapshots of Alarm or snapshot when doorbell pressed can also be sent out as email attachment via the configured SMTP service to related receivers.

FIRMWARE VERSION 1.0.0.23

PRODUCT NAME

GDS3705 (*HW Supported: 1.1A, 1.2A, 1.3A, 1.4A*)

DATE

03/26/2018

SUMMARY OF UPDATE

The main purpose of this release is bug fix and enhancement for \$1 Beta.

FIRMWARE APPLIES TO BELOW HW VERSION ONLY

HW Version	FW	Comments
GDS3705 HW1.1A	YES	
GDS3705 HW1.2A	YES	
GDS3705 HW1.3A	YES	
GDS3705 HW1.4A	YES	FW1.0.0.20 as Initial Version for this HW version

BUG FIX

- Dingdong door bell sound delayed playing out quite a lot comparing to GDS3710
- Fixed SIP number search not support "IP+Port" type
- Fixed without receiver, click "Test" and "Save" still show mail test successful
- Fixed doorbell sticky key (triggered twice) caused the initialized call hanging up
- Fixed enable Hostage Code the doorbell sound still played
- Fixed enable Silent Alarm Mode the doorbell sound still played
- Fixed Wiegand card open door the log information without card number

ENHANCEMENT

- Added UI showing Temperature/TamperSensor/DoorControl/DI/DO in the System Info Page
- Enhanced HTTP format to facilitate the 3rd party parsing Event Notification

KNOWN ISSUES

- Zero Config Feature with UCM is not yet implemented.
- When doorbell volume set to 0 still hearing the ring back tone.
- Playing Prompt Audio from Proxy/UCM sometimes distorted.
- Sending repeating registration packets to Server when receiving Terminate/Notify message.

- Dual Mic function is invalid.
- GDS Keypad input as Wiegand output still not working yet.
- Silent Alarm to SIP phone still playing siren at phone side after pressing keypad at phone side
- WebGUI limitation for Alarm Phone List and White List is not applied to P value import files and no error report generated when limitation overflow during the file import or restore.

NEW P-VALUE

P-Value	Values	Default Value	Comments
