CHANGES SINCE VERSION 1.0.3.19(Android) / 1.3.19 (iOS)

ENHANCEMENTS

- Brand-new architecture and UI design, with a new unified device management entry added
- Device Management:
  - Support adding and managing GSC3574/75 indoor device
    (The compatible and recommended version for the indoor unit is 1.0.3.10 or above)
  - Support batch configuration of device parameters by device model
- Access Group Management:
  - Added definitions for "Private Device" and "Public Device" types (private devices cannot be assigned through access groups)
  - Updated the names of system default access groups
  - When the organization type is Residential - Community, added an Apartment Access Group (not displayed to users)
  - Support associating users with indoor unit device operation permissions through access groups
- Visitor management: Administrators cannot assign private access control devices
- Alarm management: Added display of alarm information related to indoor device
- Open Door Records: Added open door records related to indoor device
- Call records: Added call records related to indoor device

NOTE:

- **When the relay of indoor device is not configured as "Open Door", the access group cannot associate users with this device and grant access permission.**
- **Although the administrator is added to the Apartment, the administrator cannot call the private door station devices under this Apartment.**
- **New rules of the access group will not automatically be applied to existing users and devices within the platform. The relevant users or devices need to be edited first, and then the new rules will take effect.**
- **Grandstream SecureAccess Mobile APP is available for both Android and iOS mobile devices.**
- **The latest SecureAccess iOS/Android APP are available at Apple Store or Google Play Store. They can also be downloaded from: https://fw.gdms.cloud/gds/download/**
