- [iOS] Fixed an issue when accessing Cloud IM when the phone language is LATAM Spanish.
- [iOS] Fixed an issue with abnormal audio quality on the very first call.

KNOWN ISSUES

- If the user joins the audio conference held by another UCM63xx server through the Wave mobile app, the user cannot view the participant list and chat after joining the meeting.
- Abnormal behavior may occur if the UCM's Cloud IM settings are modified or if the UCM is upgraded. If this occurs, the user must log out of the account and log back in to the Wave mobile app.
- Due to several issues discovered with the meeting talking indicator, the feature has been temporarily disabled.
- If certain audio/video codecs configurations are set on the UCM63xx (e.g. only G.726 as audio codec), Wave may experience abnormal behavior.
- Wave Android application may not receive push notification within 1 minute when the application screen is locked.

NEW FEATURES OVERVIEW

This section describes the major new features/changes introduced in the update and provides instructions for usage.

Create Chat Group after Meeting

Users can now create group chats from meetings they have hosted. These group chats will include all the participants of the selected meeting and the chat history from that meeting. To do so, users can navigate to the *Meetings->Meeting List->History* page, select the desired meeting they want to create a group chat for, and tap on the *More* button at the bottom of the page. From here, users can select whether to forward the meeting's chat history to a different chat or to create a group chat with the meeting's participants and chat history.

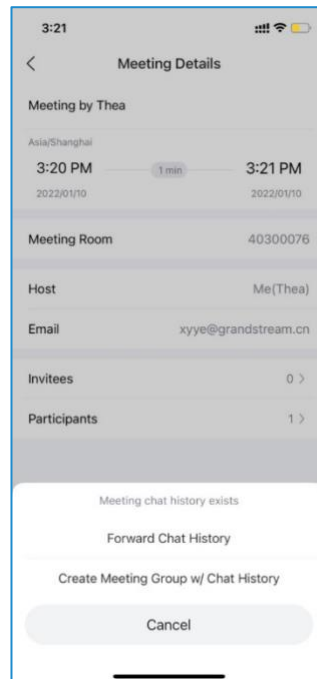

Display Invitee Status during Meetings

During Wave meetings, meeting hosts can now open up the *Participants List* page and view the invited parties that have not joined the meeting yet from the new *Invitees* tab. The meeting host can then resend meeting invites to individual users by tapping on the Invite icon to the right of the specific contacts or to all users by tapping on the *Click to Invite* button at the bottom of the page.
Call Flip

Wave and IP phones registered to the same account can now take over ongoing calls from each other. via the new Call Flip feature. For example, if both Wave Mobile and Wave Desktop are logged into account 1003, and Wave Mobile establishes a call with 1004, users can have Wave Desktop take over the ongoing call in place of Wave Mobile with no interruption.
Alternatively, both Wave and Non-Wave endpoints can dial the Call Flip feature code instead (*46 by default)

to trigger a call flip.

Audio Recording during Calls/Meetings

Wave users can now record audio calls and meeting audio. Call recordings can be found under the Call History page, and meeting recordings can be found under the Meeting Details page. Only hosts can record meetings, and only the meeting organizer can view meeting recordings.

View File List in Chat Window

Users can now view the list of files that were uploaded to each chat by tapping on the ••• icon at the top right corner of the chat window and selecting *Files*.
Contacts Viewing Permissions

Wave now supports the contact viewing privileges that were introduced in UCM630x firmware 1.0.13.7. Visibility of contacts can only be configured from the UCM management portal.

Changing Date/Time Format

Users can now change the date and time format of the Wave app by navigating to the *Me->Settings->Time/Date Format* and selecting the desired formats.

Quick Emojis

Users can now quickly enter emojis by typing their corresponding text shortcut. For example, typing "[Smile]" in the chat input box will bring up automatically.
